On April 19 at 11:00 am, Fresno CAC was notified that 33 field workers entered a vineyard to conduct cane tipping work 2 ½ hours after a ground application of Microthiol Disperss (sulfur), Quintec (quinoxyfen), and LI 700 (adjuvant). Four of the workers reported symptoms to their supervisor and were immediately transported for medical attention. The four workers were interviewed at the urgent care. The remaining crew members were interviewed on April 20, where an additional four workers reported they experienced symptoms such as numb lips, itchiness, trouble breathing, headache, and rash. Clothing and foliage samples were collected. Fresno CAC is continuing to investigate the incident.
