Subject: Results of Harris County well sampling
Attachments: Scanned from a Xerox Multifunction Printer.pdf

Hello,
Harris County Pollution Control Services and Harris County Public Health Department (Harris County) conducted residential drinking water well sampling at eight residences in the Crosby area at the end of January. These eight wells were previously sampled by Arkema shortly after the flooding/ fire during Hurricane Harvey. The attached are copies of Harris County's sampling results and letters that were mailed indicating results similar to those from the Arkema sampling in that no exceedances of VOCs or SVOCs were found and the exceedances that were detected were of secondary drinking water standards that have no adverse effect on health. Please let me know if you have any comments regarding the results.

Regards,
Latrice Babin
