				33.573	6.137

Note1: When running the EMFAC 2014 model without controls, the model changed the population and trips, keeping the same VMT. The percentage changes above reflect this.

Note2: Below the emissions were scaled according to population, as if the population and trips were the same.

Adjusted for Population and Trips

Population-Dependent Emission Processes: Start Exhaust, Hot Soak Exhaust, and Running Losses Exhaust
Trips-Dependent Emission Processes include Diurnal and Resting Losses -- which are NOT part of the charts, so no emission adjustment was calculated, but Trips total was adjusted as if the emission adjustments were done
