Copied ICIS data from Sreedevi into Effluent Data sheet.
Inserted a value of 0.1 (half the detection limit) as the DMR Value for any row that was labeled "Below detection limit" in
Deleted all rows that had a blank DMR Value.
Cut all influent data and pasted into the Influent Data sheet
Deleted any rows that appeared to be duplicates (same monitoring end date and DMR value for a facility - only differenc
DMR Value for Oregon on 9/30/11 changed to 0.1 (originally 0.05)
Calculated summary statistics in Facility Summary sheet
Added filtration and facility avg data to Effluent Data sheet

Notes
Variance approved by EPA on 12/3/2008
No RP based on 30-day P99
30-day P99 is 1.11 ng/L
Monitoring required for one year prior to permit reissuance. Not required in permit because discharge is < 1 MGD and sludge did not contain high levels of Hg.
One annual sample required
Variance based on 1-day P99 (02/2005 to 09/2009
No RP based on data since 06/2008. Data before that determined to be not representative.
