That wasn't too time consuming. After speaking to you on the phone, I recalled sending the shapefile to Joan and Cheryl just previous to their going on site for inspection. Happened last October. There are actually 2 shapefiles I attached, I created one of the ownership parcels which will give your map the look of displaying fields as squares or rectangles, and a second shapefile where I digitized just those portions of the parcels that were actually under crop production. The latter often looks more circular, or at least having the square corners trimmed. I guess just for display purposes showing where application fields are located, I'd probably go with the parcels shapefile on top of an aerial photo. The actual fields would be more useful if some analysis was involved where you needed to me more specific as to actual crop production.

I am forwarding the email I sent to Joan in Cheryl last October, along with the shapefiles I digitized.

Milo

Attached are the 2 shapefiles I created, one for CSD parcels, and the other for CSD application fields under crop production.
