Attachments: Combined Map for CSD.pdf

Hi Jenny,

It looks like my maps showed the location of wells that either had been monitored, or were going to be monitored for nutrients, but no actual results on the map. The map I am forwarding is from August 2016.

Milo

There was a typo in the map title. Corrected version is attached. Cheryl, along those lines, let me know if you would like a different title.

Hi Sam,

First of all, best of luck in the future this being your last day here. If you wind up ultimately working here, it will be to EPA's benefit to have you.

That being said, I am attaching the map for Cheryl that continues to be a work in progress. Please be advised that the map shows farming operation information, and unless the farm is under a public permit such as NPDES, the information is considered to be confidential business information. If it is a permitted facility then the information is in the public domain. But either way I'd advise discretion when sharing the map with others. (I was told that CSD is indeed a permitted facility, but I can't find the NPDES number in my databases or by online search. Perhaps State permit?).

Great to have worked with you, and good luck.

Milo

Milo,

Thanks. Thursday if possible so I can see it as it's my last day, but otherwise Monday.

Sam

Sam,

Sorry this is your last week, EPA definitely benefitted from your time here.

When do you need the map to ready/complete?

Milo

Subject: Combined map for CSD

Hello Milo,

Would you be able to make a combined map that includes:

I. The fields that CSD owns and/or spreads on
II. CSD monitoring wells that have their locations provided in the 2014-2015 GW monitoring attachment
    a. Map of their locations is on pages 11 and 13 of the pdf
    b. Also color code them as to their contamination type:
        i. Nitrate
        ii. Fecal coliform
        iii. Both
    c. Here are their contamination types:
        i. CSD-1
            1. Both in April 2015
            2. Only Nitrate in Oct 2015
        ii. CSD-2
            1. Fecal in April 2015
            2. Nitrate in Oct 2015
        iii. CSD-3
            1. Both in April 2015
            2. Only Nitrate in Oct 2015
        iv. CSD-4
            1. Both in April 2015
            2. Only Nitrate in Oct 2015
III. The homes that have said are willing to be tested
    a. I have found well logs for some of the wells and have recorded their ID # and Depth, please include these attributes in the metadata.

b. If you could color code them in two groups:
    i. The homes that have previously been tested and are contaminated for NO2/NO3
    ii. The homes that have not been tested previously
c. This information is provided in the second attachment

IV. Also in the second attachment are some known contaminated wells that the owners have not been contacted include them on the map as contaminated but maybe in a different color to signify that they have not said they are willing for us to test their wells.
V. The potential sample sites from WDNR and Ryan Bahr (PWS, Transient Community, etc.)
    a. Also color coded to whether they are contaminated with Nitrate, E. coli, nothing, and unknown.
VI. Identify the cranberry farms in the general area
VII. Ground water flow
VIII. Background sites identified
    a. They are number 4 and 5 in the second attachment, but you can include that red box on the other maps.

Thank you for all the work you have been doing for us. You can send the combined map to Cheryl once you create it as this is my last week here.

Thanks again,

Sam
