Subject: central sands

Linda – the briefing/talking points prepared for the DRA included the results on the private wells. I understood the briefing was so he could have a discussion with Pat Stevens. Did that call happen?

- EPA's May 2018, sampling work was conducted at private wells downgradient of fields that CSD identified for spring 2018 manure application. All 5 of the private well samples found >10 mg/L of nitrates ranging from 21.9 mg/L to 40.4 mg/L.
