The following is a rough idea of where we want to sample in phase one of the RI. The sampling plan is not final. We are currently working on a task order with a contractor to do the sampling. They will develop the final sampling plan. This figure shows the approximate locations we are interested in sampling. The sampling with be done in phases. Phase one will last 3-5 weeks and will involve about 5 workers. Additional sampling will happen in phase 2 if needed.
