WA removal data.xlsx
09-11 Budget--USE.xlsm

Rachel,
Here is some data for you. The WA Removal Data file is an extraction of pertinent info from our database over many years. The problem is that we haven't consistently entered cost data into the database. The total removal costs is just as it sounds but on some of the vessels there is no entry for that but there is an entry for "amount reimbursed" which is 90% of the total cost (or 75% of the total cost for entries from the 05-07 biennium or earlier).

I have also attached my 09-11 biennium budget spreadsheet. There is a tab towards the front labeled 09-11 Projects which is a summary page listing all vessels that we spent money on whether DNR or another agency took the lead. The other tabs have details on each vessel DNR took the lead on removing. That will give you a breakdown of where the money spent on each vessel went. If there is a discrepancy between the cost numbers entered into the removal data excel sheet and the budget spreadsheet, the budget spreadsheet is the most accurate. If you want the budget spreadsheet for additional years let me know.
Happy New Year!

Melissa,

I am working on a report for the Oregon State Marine Board about abandoned/ derelict vessels, I and I am including an analysis on removal costs. The problem is, we have a really small dataset. I was wondering if you would be willing to share your larger dataset of all the vessels that Washington has removed? I pulled some vessels from the Access database you shared with the task force, but I think that was only the vessels from Sector Columbia River. I am interested in the information that is in tblVesselInfo (like documentation number, vessel length, total removal cost, and removal date). Could you send me a copy of that table from your entire database? Let me know if you have any questions. Thank you for any help you can provide!
