Subject: RE: Internal deliberative: 0,1 Congener in soil vs distance from Solvay extended from the northern transect

John,

I sent Tim the draft last night as he needed to get something to Andy G by the end of the day. I think the basic framework is there and we'll be able to refine the important points as it comes together.

They will probably need a "final" version by the end of the week. This process is actually pretty helpful as it helps us deicide what is important.

Are you going to call in to the Tim W meeting at 10:00 am?

Andy

Hey Drew,

I need a map of the sum of the 9 polyether congeners in soil ASAP. This would be most helpful.

We are supposed to produce a complete draft today.

Thanks
John

Excellent!
Thanks, John-
I'll hit this again tomorrow.

Drew,

I boiled down the data to three clear worksheets in the attached spreadsheet. These include all my sample data at this point. This also includes calculation of distance of each sample point from Solvay.

If you can send me maps, I can contour them for everyone's review and comments. The sooner the better. Ideally data points will include the numeric value adjacent to each.

I think maps that are useful would include:
