Hi James,

Great manuscript!

I think almost everything I suggest is discretionary for you to consider; everything I suggest is in track-changes mode. A few items come to mind for you to consider, but first-author preference has final say:

1)
2)
3)
4)
5)
6)
7)

Ex. 5 Deliberative Process (DP)

Nice figures on the H vs Cl compounds . . .

Thanks for your great effort!
John

Subject: NJ Water Manuscript for Co-Author Review

Hello Everyone,

While Jon already did most of the heavy lifting regarding the soil work and source characterization for our friendly, neighborhood emerging contaminant I would be remiss to not also discuss the work we did with water. Since at least some of the water reports have gone back to NJDEP I figured it was time to reveal the scientific manuscript.

Find attached a short letters manuscript detailing the non-targeted analysis results from both the initial water sampling (which I somehow think we still haven't returned an official report on?) as well as the POET sampling follow-up.

If everyone could provide me with their feedback and other comments by the end of next week (May 15) I would be appreciative. I have started dealing with EPA internal review, but would like all the co-author comments before submitting a clean copy for advanced notification.

Thank you.
