Hi Rob

Please review attached map. I'll follow up with a call. I need to re-submit this map. What happened was the groundwater elevations were not the data inputted into Surfer (as I thought I had done). The depth-to-water levels were the data inputted, erroneously.

The groundwater flow is shown as predominantly easterly with southeast tangents rather than any western tangents. I sincerely apologize for this mistake. This makes a whole lot more sense. It'll be corrected and sent back for review.

Yen-Vy
