Potential Sites for September 2019 Proposed Rule:

Site Name & Location	Site Information	Estimated RA Cost

Ex. 5 Deliberative Process (DP)

Region 3 **Blades Groundwater Plume** *Blades, DE*	**Background (former site use):** Two co-mingled groundwater plumes from two electroplating facilities, one currently active and one former, as potential sources. **Contaminants of Concern:** PFOA/PFOS and chromium exceeding benchmark levels in groundwater and soil. Cyanide below benchmark in groundwater and soil. **PRP Information**: PRPs have not yet been definitively identified but potential facilities include Procino Enterprises (viable) and Peninsula Plating (viable). **Stakeholder Input:** The state/governor is anticipated to support listing. The town of Blades owns/operates the municipal wells and the treatment system and has requested that EPA hold public meetings at major junctures in the site assessment process. **Notable Site Issues:** Both facilities are in the state's voluntary cleanup program but very limited investigation and cleanup work has been done. The facilities have been in non-compliance with RCRA in the past and have had EPA enforcement and removal actions conducted to contain and manage the contamination. **Why list?** Groundwater in the contaminated aquifers serve as the sole source drinking water for approximately 5,000 people living in the town of Blades who are served by 3 public and more than 100 private drinking water wells. Levels of PFOA/PFOS in groundwater exceed EPA's health advisory levels and levels of chromium and cyanide exceed MCLs. The residential area to the west of the site is a low-income area.	<$10 M
