I don't remember seeing any modeling work focusing on the Benchmark site. I think for the design of the current Benchmark system along Nelson, they estimated the widths of capture zones of the extraction wells using analytical method based on estimated Qs. Not sure who did it though.

John may have more information about this.

Tom,

I would like HILL to review past PVOU documents for any CDM-generated modeling or other documents where it may or may not include Benchmark data for any efforts in the PVOU.

Please call for clarification if needed

Ray
