Subject: Pilot Study inside Huster Substation - Sodium Persulfate

Dear Tonya,

I am attaching Ameren's work plan for the on-site Pilot Study treatment work that I discussed with you and Clint. As you will see, this Pilot Study work is virtually identical to that which EPA approved previously near MW-5. That study created no adverse environmental impacts and was extremely successful in reducing VOC contaminant levels at the treatment locations. We expect the same results from this study as well. We also have included in the work plan a discussion demonstrating that this Pilot Study could not in any way interfere with the field investigation work that EPA plans to conduct in January. We welcome oversight from EPA in this endeavor and request your timely review and approval of the work plan so that remediation activities can proceed

expeditiously. Our contractors plan to mobilize for this work on January 23, 2023. If you have questions or comments, we would be happy to discuss them with you before that date, but absent an objection from EPA otherwise we will proceed as planned on that date.
