Also- they still have color coded issues- they note all ross Tokanel as yellow- wells that have been sampled when this is not true. It should be properties with private wells.

Hi Andy-

The proposed revised figure has the 4 surface water locations already identified.

Subject: RE: TG - GMZ Permit Application Addendum

Good Morning Jim,

Can the Group submit an updated figure/site plan that includes the following information:

- Identification of all monitoring wells at the site;

Identification of all properties on the figure (street IDs or tax map/lot will be acceptable);
- The proposed GMZ boundary;
- Removal of the color coded rings for past/proposed monitoring locations; and,
- Updated color coding for residential properties in the area. Three colors will be sufficient (connected to public water/private water supply well/undeveloped parcel).

The monitoring that will be required in the permit will be different than what was proposed in the initial application so it will be helpful to have the updated figure to reference. One thing specifically will be the requirement for a comprehensive water level monitoring event each year and there are several wells on the figure that are not labeled. Thank you for your assistance in this matter.

Sincerely,

-Andy
