Here is a scanned PDF of the article. It looked clear from my end. I did not crop out the extra pieces of pages but if you need that done let me know and I can do it.

I hope you find this useful and please let me know if I can help in any other ways.

Russell

Thanks much Russell,

As you may be aware, salt pond restoration around the SF Estuary has been in full swing for several years now. I am interested in better understanding microbial processes, food webs, species diversity, and the nutrient dynamics of natural salt ponds and those used for commercial purposes. My initial view is that these systems have been viewed too simplistically in terms of these factors, i.e, that only lower salinity salt ponds are highly productive/diverse.

Thanks for looking for the book chapter.

Best,

Rob

Subject: Book Chapter

Dear Dr. Leidy: I have received your message and while I will look I am pretty sure I don't have a PDF of that particular chapter as it was a bit older. I may still have a copy of the book and if so I might be able to scan a copy for you.

May I ask why the EPA is looking at this? I have been trying to interest people in using what I know about the environmental and waste treatment potentials of these ponds for many years so I am most curious.

Russell Vreeland
