Hi Luisa - Alicia put together two maps that show all of our sampling sites that drain near your area of interest (note that the 2016 sites are on our list for this year). We don't have any data from areas draining directly to the ponds you're interested in but do you have information from multiple drainages near by. Primarily, we would have PCBs, Mercury, SSC, and some additional analytes for Pulgas and Belmont Creek.

Please let us know if you'd like any of the data from these sites. We can also put together a list of analytes for the sites if that would be helpful.

Regards,

Jen

Hi Luisa – apologies for the slow reply in getting back to you on this. Hopefully we didn't miss an opportunity to get this information to you. We can get this to you tomorrow if that would still be helpful. Let me know.

Regards,

Jen

Lester, this might be the fastest link to see the ponds in question in the EIS that include a flood storage component for Redwood City. This is a summary one pager for the alternative, the pond is identified as "S5".

But if you want to delve into the fuller documentation in the EIS, here's the overall link.
