This is an example of the equipment available to us for a number of maintenance and/or emergency operations.

1. As evaporation ponds recede, any solid waste can be removed and field applied, stored or composted
2. Proper maintenance of any manure alleyways to keep them free of excess manure
3. Dirt mound and pen maintenance
4. Maintain berms, ditches and other structures to ensure rain water is diverted and kept clear of manure contamination
5. Should a berm ever be breeched, we have the capability of moving hundreds of yards of material in a short time period to protect discharge into a waterway

8132 - Avg # 10½ tons

Field Application Record

Form 12-A

(For Off-site transfer use Form 12-B)

Field Name: _____ Year: _____

Date & Time	Recorded by (Name)	Number of loads - Tally	Total Amount (gal/tons)	Acres Receiving Manure	Rate gal/ton per acre	Which Manure Storage?	Application Method[1]	Wind Direction & Speed	Weather Conditions[2] †	Temperature	Relative Humidity ☐ or Dew Point ☐	Soil Moisture[3]	24 hr Precip. Previous	24 hr Precip. Post	Accuracy for Calibration (see Step 13)	Evidence of leaking equipment[4] (Y or N)
															?	?
															?	?
															?	?

1—Application methods: B = Broadcast, not incorporated the same day; BI = Broadcast, incorporated the same day; K = Knife injected; S = Sweep injected; I = Irrigation (See instructions if using center pivot.)
2—Weather conditions descriptions could include: S = sunny, PS = partly sunny, PC = partly cloudy, C = cloudy, OC = overcast
3—Soil moisture codes: D = Dry; Saturated = S; Ponded = PN; Frozen = FR; Snow-covered = SC
4—If yes, use Form 12-C. to show record of repairs.
†—See USA Today for sample codes.
