Subject: Smitty Toppenish - bioremedition inejction work update
Date: 12/15/2011 08:40 PM

Hi Rob

Sorry to have missed your call. The first phase of bioremediation went well. It took place from December 5 – 10, 2011. One day over the estimate; however, we got in the volume estimated with day-lighting of materials only at one location. We got in 3 angled borings for injection at the building at the Site. Couldn't get the 4th angled boring in due to utilities and foundation. Other than that, no changes in the proposed SOW.

We'll follow the proposed schedule with the 2nd phase of bioremediation in March 2012.

Yen-Vy
