News from OEHHA

Drinking Water - Public health protective concentration for para-chlorobenzene sulfonic acid (pCBSA) in drinking water.

The Office of Environmental Health Hazard Assessment (OEHHA) is identifying a public health protective concentration of 3 parts per million (ppm) for the chemical para-chlorobenzene sulfonic acid (pCBSA) in drinking water. pCBSA is a by-product of the production of dichloro-diphenyl-trichloroethane (DDT) and is often found in soil at former DDT manufacturing sites. pCBSA is highly water soluble and has contaminated aquifers beneath these sites.

Fact Sheet - Oil Spills and Seafood the process by which OEHHA responds to spills and evaluates the risk of eating seafood after a spill
