Hi Scott and Cynthia,
Please see below for the contact information for California Water Service Company and the SWRCB Division of Drinking Water (DDW). Shu-Fang Orr attended the January 9th meeting and she has already contacted Jackie Takeda to give her a heads up. Feel free to call Jackie directly to coordinate sampling of Cal Water Well 279-01.

Jackie Takeda
California Water Service Company
2632 W. 237th Street
Torrance, CA 90505
Phone: (310) 257-1482
E-mail: jtakeda@calwater.com

Subject: FW: pCBSA in Gage

Hi Phuong, This is an old email and after I recommended waiting until April, I was told that Enrique wanted the closest operating production well sampled ASAP – even though we have a non-detect monitoring well between it and the Site.

Anyway, I want to give you the map, as a FYI

Thank you for your help. Cynthia

Subject: pCBSA in Gage

Hi Scott,

Attached is the preliminary pCBSA results from the September 2014 sampling event. The furtherest out green line is the 1 ppm contour. I compared the contours to the production well locations, and feel confident that the production wells are not currently impacted. However, I would appreciate it, if you take a look and discuss with me.

The Lynwood had two hits of pCBSA in the single digit ppb range.

The closest down gradient production well is 219-01 (not active). Between it and the plume is monitoring well G-32, which has non-detect results. About a mile further down gradient is production well 279-01. The monitoring well between it and the plume is G-31, which unfortunately, was not sampled. Still given the distance and the results from G-28 (2 ppm) and G-32 (ND), I don't see an urgency in sampling it.

I talked to Phuong, and the next sampling for these wells (and up gradient CSWC Dalton #1) is April/May this year. I would like to propose that the production well

sampling and analysis for pCBSA occur then. I would suggest these three wells and the two monitoring nested well locations for Gage and Lynwood wells. (Nested Monitoring well Carson #2 is between the Site and well 279-01.) Let me know what you think.

Thanks, Cynthia
