Subject: RE: Draft iPCB workshop plan

Thanks for distributing Amelia and my apologies for the delay. Looks like a full slate of possibilities to draw from and refine. In response to question 5, I wouldn't think we would want to limit to just yellows as there has already been some progress made with yellow-striping paint. I would think we are ready to expand on that success to other colors/products/uses?

A PCB sniffing dog demonstration would be cool!

I'm glad to see HP and Apple included in one of the panel discussions. I think it would be informative to hear how they determined internally that they could commit to meeting the 0.1 ppm threshold (ie. what kinds of internal discussions and/or evaluations of their processes allowed them to reach that decision). Understanding that process may help other companies replicate the evaluation to see if they could make similar commitments.

Hope that helps and good luck with today's meeting! Regards - Karl

Subject: Draft iPCB workshop plan

Hi all,

Lauren Heine, Ken Zarker, and I met and pulled together a draft plan for the iPCB and pigments workshop. We'd appreciate any high-level comments and suggestions you have.

We are meeting again Wednesday at 1 pm, so if you can add comments before then, that would be very helpful. We will also send around a more refined version for comments after that meeting.

Best,

Amelia
