COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)

Partial seasonal average as stated in the permit,page 9, "must be calculated as the sum of all the daily discharges measured during the season of February 1st through the last day of the monitoring month, inclusive, divided by the number of daily discharges measured during the time frame." The monitoring period listed above should be from 02/01/2015 to 09/30/15. There was no option on the Frequency of Analysis to list zero times for the month, HARSB had no discharge for September. Jason from EPA suggested "01/30".

COMMENTS AND EXPLANATION OF ANY VIOLATIONS (Reference all attachments here)

Analytical Laboratories, Inc. conducted the whole effluent testing for us in February 2017. The lab reported the flathead minnow survival and growth study, the Selenastrum caprocornutum growth study and the Ceriodaphnia dubia growth study. Analytical Laboratory had issues with their quality control and could not resolve the issue with Ceriodaphnia dubia reproduction quality control. We sent another sample to Analytical for the Ceriodaphnia dubia reproduction study. They were unable to resolve the issue for the Ceriodaphnia dubia reproduction study
