Kelly,

Attached are some maps and information. I also added the presentation I will be giving next week to Karen.

Karl,

I wanted to pass along the validated data and several maps from the Site Inspection show the locations of the public and residential wells. According to the SI report and current information from DNREC 100 domestic wells within a half a mile radius; and 350 domestic wells from ½ mile to 1 mile radius.

Hi Roviro,
Here are the domestic well maps and the sampling results. Let me know if you have questions.

Hi Carol/Mike,
The attached 3 maps shows the domestic and public well in and around Blade . There are about 100 domestic wells within a half a mile radius of the public wells where we found PFOS, PFOA. There are about another 350 domestic wells from ½ mile to 1 mile radius. The map shows the roads and intersection and the wells can be found that way. I also added an aerial map of the town that may help.
Let me know if you need further info. Thanks.
