FORM GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

DATE: June 28, 2019

TO: Timeyin Dafeta, Plant Manager
Hyperion Water Reclamation Plant

Fernando Gonzalez, Plant Manager
Terminal Island Water Reclamation Plant

FROM: Farhana Mohamed, Division Manager FM
Environmental Monitoring Division

SUBJECT: **ASSESSMENT OF BIOSOLIDS FOR MAY 2019**

This report contains data from the analysis of composite biosolids and digested sludge samples collected in May 2019 at the Hyperion and Terminal Island Water Reclamation Plants. The samples were tested in accordance with EPA's Part 503 Sewage Sludge Regulations, Tables 1 and 3, to furnish a beneficial use assessment. Analyses were also performed to determine if pathogen and vector control requirements of Part 503 were met.

Hyperion Water Reclamation Plant

The metals and nutrient analyses data are presented in Tables 1 and 2 of this report. All metals detected in the composite sample were below their respective ceiling and pollutant concentration limits listed in EPA 40 CFR 503.13, Table 1. The results for Chromium, Potassium, and Sodium were slightly higher than their 12-month average (Tables 1 and 2). Please note that the concentration of Cadmium was higher than its 12-month average (Table 1). Also, for May, fecal coliform and *Salmonella* results were below the EPA 40 CFR Part 503 limit for Class A biosolids. The May helminth ova result was also below the limits for Class A biosolids. A farm sample was sent out to Zalco Laboratories, Inc. for enteric virus analysis. The May enteric virus results were also below the limits for Class A biosolids. The enteric virus results for January and February are not yet available (Table 6). The May dioxin and polychlorinated biphenyl results were non-detect (Table 5).

Terminal Island Water Reclamation Plant

Beginning in July 2010, TIWRP began injecting digested sludge into TIRE with a goal of 100% injection, but may occasionally produce biosolids due to operational logistics.

For May, the metals and nutrient analyses data are presented in Tables 3 and 4. All metals detected in the composite sample were below their respective ceiling and pollutant concentration limits listed in EPA 40 CFR 503.13, Table 3. The results for Zinc, Potassium, and Ammonia-N were slightly higher than their 12-month average (Tables 3 and 4). The May dioxin and polychlorinated biphenyl results were non-detect (Table 5). Fecal coliform and *Salmonella* were below the EPA 40 CFR Part 503 limit for Class A biosolids (Table 7).

Graphs of the concentrations of selected metals in HWRP and TIWRP biosolids and digested sludge over the past 24 months are shown in Figures 1 through 10.

If you have any questions about this report, please contact Rafael Valenzuela of my staff at (310) 648-5838.
