Hi all,

A question regarding the application of the Stopping Rules and documentation of literature post-peer review for the benzo[a]pyrene (BaP) assessment recently came to light. The email discussions around this issue prompted several more questions. Therefore, a quick discussion was warranted in order to solidify a general, yet flexible practice that can be documented and communicated. Additionally, in considering the Stopping Rules, it's been more than 3 years since we established them and now would be a good time to determine if any updates are needed.
