There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
4462	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P044 may be caused by a concern with fuel tank vent lines. There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
4463	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4464	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4465	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4466	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4467	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
4468	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
4469	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4470	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4471	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4472	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4473	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4474	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4475	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4476	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4477	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4478	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4479	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4480	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4481	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4482	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4483	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4484	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4485	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4486	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4487	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4488	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4489	Malfunction Indicator Lamp (MIL) illumination may be caused by a concern with fuel tank vent lines. The vehicle may also exhibit difficulty stating after refueling. The part number involved is 987 110 128 01. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacemen
4490	Malfunction Indicator Lamp (MIL) illumination may be caused by a concern with fuel tank vent lines. The vehicle may also exhibit difficulty stating after refueling. The part number involved is 987 110 128 01. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacemen
4491	Glow plug failure caused by cracking, defective heater element and electrical malfunctions will illuminate the Malfunction Indicator Lamp. Diagnostic trouble codes P161A through D will be stored by the Engine Control Module. Improvements in the ultra sonic check and a reduction in maximum glow plug temperature were
4492	Thermostat failure caused by distorted o-rings, poor fitting thermostat plugs or sticking concerns can cause Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P3081 and P2181. Concerns of coolant leakage have also been reported. Part number 06B 121 111 K was reported as the causal
4493	Malfunction Indicator Lamp (MIL) illumination, rough running concerns with numerous miss fire codes stored in the Engine Control Units (ECU) memory can be caused by malfunctioning ignition coils. Analysis of sample parts shows that the ignition coils may have internal electrical problems (vendor problem) as well as in
4494	On some vehicles the exhaust manifolds may develop a crack. the crack forms along the weld which attaches the two-in-one collector strap to the manifold. This strap, which is designed to prevent cracking of the manifold at the terminal collector, can over-constrain the thermal expansion of the manifold at extremely hi

4555	The Continuously Variable Transmission (CVT) Controller may not permit a vehicle to complete an inspection/maintenance two speed idle test at 2500 RPM. This test procedure is primarily used in the state of California.Remedy: Nissan will conduct a voluntary service campaign (P8212) of the affected vehicles to reprog
4556	Some knock sensors have been manufactured with a slight crack in the sensor element which may lead to advanced ignition timing condition. The pinging noise occurs.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought in for service. The knock sensor will be replaced u
4557	Some knock sensors have been manufactured with a slight crack in the sensor element which may lead to advanced ignition timing condition. The pinging noise occurs.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought in for service. The knock sensor will be replaced u
4558	Some engine coolant temperature2 (ECT2) sensors (located bottom of radiator) were manufactured with porous moldings which may allow splashing water, ice and road salt to enter the terminal area causing an open or short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occu
4559	Some engine coolant temperature2 (ECT2) sensors (located bottom of radiator) were manufactured with porous moldings which may allow splashing water, ice and road salt to enter the terminal area causing an open or short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occu
4560	Some engine coolant temperature2 (ECT2) sensors (located bottom of radiator) were manufactured with porous moldings which may allow splashing water, ice and road salt to enter the terminal area causing an open or short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occu
4561	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4562	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4563	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4564	Malfunction Indicator Lamp (MIL) on with Diagnostic Trouble Code (DTC) P0706 (transmission range sensor circuit performance) is related to the Transmission Control Module (TCM). This concern only involves the Continuously Variable Transmission (CVT). Other symptoms associated with this failure are shifter display f
4565	Some vehicles equipped with a Continuously Variable Transmission (CVT) the On Board Diagnostic (OBD) calibrations for the Fuel System Lean and TPS/MAP Performance diagnostics are overly sensitive and may cause MIL illumination for DTCs P0171 or P2173, respectively, when no problem exists.Remedy: A TSB was

The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4585	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4586	The OBD-II completion rate for the evaporative emission monitor is not currently meeting the in-use monitoring requirements.Remedy: Nissan will conduct a voluntary recall campaign to reprogram the Electronic Control Module (ECM). 9/29/2008: Nissan issued voluntary emissions recall NE-9-29-8.
4587	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4588	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4589	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4590	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4591	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4592	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4593	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4594	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4595	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4596	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4597	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4598	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4599	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4600	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4601	Some vehicles have experienced rough engine idling during the initial cold start-up period. To improve this condition Hyundai has refined the engine control module program to more properly regulate the fuel injection control during the subject condition.Remedy: Hyundai will publish a TSB to provide repair information
4602	Some vehicles have experienced rough engine idling during the initial cold start-up period. To improve this condition Hyundai has refined the engine control module program to more properly regulate the fuel injection control during the subject condition.Remedy: Hyundai will publish a TSB to provide repair information
4603	Some vehicles have experienced rough engine idling during the initial cold start-up period. To improve this condition Kia has refined the ECM program to more properly regulate the fuel injection control during the subject condition.Remedy: Kia will publish a TSB to provide repair information to the dealers for this condit
4604	Some vehicles have experienced rough engine idling during the initial cold start-up period. To improve this condition Kia has refined the ECM program to more properly regulate the fuel injection control during the subject condition.Remedy: Kia will publish a TSB to provide repair information to the dealers for this condit
4605	Some vehicles have experienced rough engine idling during the initial cold start-up period. To improve this condition Kia has refined the ECM program to more properly regulate the fuel injection control during the subject condition.Remedy: Kia will publish a TSB to provide repair information to the dealers for this condit
4606	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4607	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4608	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4609	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4610	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4611	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4612	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining

	O
4753	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4754	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4755	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4756	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4757	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4758	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4759	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4760	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4761	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4762	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4763	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4764	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4765	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4766	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4767	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock.Remedy: The oxygen sensor shield design was changed for the 2008MY. Affected vehicles may likely be brought to a dealership for repair due to the illumination of the MIL. The oxygen sensor will be repl
4768	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock.Remedy: The oxygen sensor shield design was changed for the 2008MY. Affected vehicles may likely be brought to a dealership for repair due to the illumination of the MIL. The oxygen sensor will be repl
4769	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock.Remedy: The oxygen sensor shield design was changed for the 2008MY. Affected vehicles may likely be brought to a dealership for repair due to the illumination of the MIL. The oxygen sensor will be repl
4770	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
4771	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
4772	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
4773	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
4774	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
4775	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
4776	The vehicle emission control information (VECI) label on some vehicles does not include the emission control system identifier "TC" for the turbocharger.Remedy: Chrysler will conduct a voluntary emissions recall (H43) to replace the VECI label on affected vehicles.
4777	In the presence of a certain fuel system rich faults certain vehicles equipped with 1.8L engines may not be able to store a DTC and illuminate the MIL until emissions reach as high as 2.4 times the emission standard to which the vehicle was certified.Remedy: Corrected software and calibrations have been made availab
4778	The vehicles were built with emissions labels that are correct, but they will not be destroyed when removed. Part numbers involved are, for 2008 A 132 221 00 01 and for 2009 A 132 221 03 01. The manufacturer has initiated a voluntary service campaign and will relabel vehicles at their next workshop visit. Update dat
4779	The vehicles were built with emissions labels that are correct, but they will not be destroyed when removed. Part numbers involved are, for 2008 A 132 221 00 01 and for 2009 A 132 221 03 01. The manufacturer has initiated a voluntary service campaign and will relabel vehicles at their next workshop visit. Update dat
4780	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
4781	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
4782	Poor soldering of the internal electrical coil wire to the flat pin connector may cause the purge valve to stick closed. When the valve sticks closed the fuel vapors are not allowed to return to the fuel tank from the charcoal canister. Eventually the canister will become saturated and will emit fuel vapors into the atmosphere
4783	The manufacturer discovered vehicles being shipped to cold climate areas were built with the wrong air cleaner assembly. Cold climates require an air cleaner housing that will provide warm air to the engine during the warm up period. There is no effect on drivability or emissions, so no emissions testing is planned. As c
4784	The manufacturer discovered vehicles being shipped to cold climate areas were built with the wrong air cleaner assembly. Cold climates require an air cleaner housing that will provide warm air to the engine during the warm up period. There is no effect on drivability or emissions, so no emissions testing is planned. As c
4785	Thumping or knocking from the fuel tank area during or shortly after driving may be caused by a plugged evaporative canister. Part number 4F0 201 801 B/A were reported. The canister can become plugged by sand, no indication was given as to where the sand comes from. The filter element was to fine in the original
4786	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
4787	Some NISSAN 2003, 2004, 2005 vehicles have a throttle valve shaft problem. On opening and closing the On-Board Diagnostics (OBD) system will diagnose any incorrect throttle position and illuminates the Malfunction Indicator Light (MIL). The vehicle owner will easily recognize the vehicle is not operating properly and
4788	The camshaft position sensor (CMP) is protected against engine oil by a cupped shaped cover. During the manufacturing process this cover could be deformed to the extent that the 0-ring between the sensor and the cover does not seal properly. Engine oil can then seep into the cover and disable the sensor. For vehicl
4789	Some lock pins and housings for Variable Valve Timing Control System have been manufactured out of specification or contaminated with foreign objects. This may lead to unstable valve timing under cold engine starting conditions. A loud knocking noise occurs.Remedy: Part quality has been improved. When this de
4790	Turbo charger actuating or adjustment rods may become corroded at the ball stud mechanism. The ball stud and linkage will become stiff resulting in delayed action of the turbo. The impact on emissions has not been determined and no test data was provided. Part numbers involved are 997 123 013 X, 997 123 013 7
4791	Some lock pins and housings for Variable Valve Timing Control System have been manufactured out of specification or contaminated with foreign objects. This may lead to unstable valve timing under cold engine starting conditions. A loud knocking noise occurs.Remedy: Part quality has been improved. When this de
4792	Turbo charger actuating or adjustment rods may become corroded at the ball stud mechanism. The ball stud and linkage will become stiff resulting in delayed action of the turbo. The impact on emissions has not been determined and no test data was provided. Part numbers involved are 997 123 013 X, 997 123 013 7
4793	Turbo charger actuating or adjustment rods may become corroded at the ball stud mechanism. The ball stud and linkage will become stiff resulting in delayed action of the turbo. The impact on emissions has not been determined and no test data was provided. Part numbers involved are 997 123 013 X, 997 123 013 7
4794	Because of thermal shock conditions during high performance driving events and due to different material expansions the welding points of the metal monoliths of the affected converters may break causing a rattling noise. If left unattended this could lead to a deformation of the monolith's cell structure. Update dated
4795	Because of thermal shock conditions during high performance driving events and due to different material expansions the welding points of the metal monoliths of the affected converters may break causing a rattling noise. If left unattended this could lead to a deformation of the monolith's cell structure. Update dated
4796	Because of thermal shock conditions during high performance driving events and due to different material expansions the welding points of the metal monoliths of the affected converters may break causing a rattling noise. If left unattended this could lead to a deformation of the monolith's cell structure. Update dated
4797	A malfunction of Fuel Delivery Module/Sender (FDM) (part C2C24164) will cause a wrong fuel gage reading or a illuminated Malfunction Indicatpr Lamp (MIL). The cause is deterioration of the sender resistance track caused by a reaction with sulfides that are in fuel. Diagnostic Trouble Code (DTC) P0460 is stored in the
4798	A rattle from under the hood and or a loss of performance can be caused by the Variable Intake System (VIS) actuator arm (part LKB000120) becoming detached. Due to improper diagnosis complete intake manifolds are being replaced in the field. With the VIS2 valve inoperative there is a flat spot in the torque curve
4799	Affected part number 11531485847 (thermostat). The seal between the thermostat and the thermostat housing is not compatible with the engine cooling fluid causing a leak. The decreasing cooling fluid level will cause the engine to exceed 115 degrees Celsius that will result in the coolant warning light to illuminate.Re
4800	Affected part number 11531485847 (thermostat). The seal between the thermostat and the thermostat housing is not compatible with the engine cooling fluid causing a leak. The decreasing cooling fluid level will cause the engine to exceed 115 degrees Celsius that will result in the coolant warning light to illuminate.Re
4801	Malfunction Indicator Lamp (MIL) illumination associated with numerous Diagnostic Trouble Codes (DTC) may be caused by defective oxygen sensors. It was discovered the sensors were damaged during the material handling and assembly process. This concern will not affect drivability but will result in an increase of tai
4802	Malfunction Indicator Lamp (MIL) illumination associated with numerous Diagnostic Trouble Codes (DTC) may be caused by defective oxygen sensors. It was discovered the sensors were damaged during the material handling and assembly process. This concern will not affect drivability but will result in an increase of tai
4803	Malfunction Indicator Lamp (MIL) illumination associated with numerous Diagnostic Trouble Codes (DTC) may be caused by defective oxygen sensors. It was discovered the sensors were damaged during the material handling and assembly process. This concern will not affect drivability but will result in an increase of tai
4804	Malfunction Indicator Lamp (MIL) illumination associated with numerous Diagnostic Trouble Codes (DTC) may be caused by defective oxygen sensors. It was discovered the sensors were damaged during the material handling and assembly process. This concern will not affect drivability but will result in an increase of tai
4805	There are reports of an electrical malfunction in the Intake Manifold Runner Control Motor, part number 06F 133 482 B/D/E. This malfunction will illuminate the Malfunction Indicator Lamp and store Diagnostic Trouble Codes (DTC) P2004 and P0642. There is no effect on emissions and test data was provided. For 2008
4806	The customer is alerted to this failure by high engine temperature indication and/or loss of coolant or Malfunction Indicator Lamp (MIL) illumination. Thermostats are often replaced as a part of other cooling system repairs. Approximately 20% of the returned thermostats are found to have failed in the closed position.
4807	Fuel filler neck and fuel cap threads have been shown to have process variability which can lead to difficulty in fitting the filler cap. Poor or loose fitting caps will allow evaporative emissions into the atmosphere. A loose cap will also cause the Malfunction Indicator Lamp (MIL) to illuminate. Customers are expected to ret
4808	Fuel filler neck and fuel cap threads have been shown to have process variability which can lead to difficulty in fitting the filler cap. Poor or loose fitting caps will allow evaporative emissions into the atmosphere. A loose cap will also cause the Malfunction Indicator Lamp (MIL) to illuminate. Customers are expected to ret
4809	Fuel filler neck and fuel cap threads have been shown to have process variability which can lead to difficulty in fitting the filler cap. Poor or loose fitting caps will allow evaporative emissions into the atmosphere. A loose cap will also cause the Malfunction Indicator Lamp (MIL) to illuminate. Customers are expected to ret
4810	On certain vehicles with manual transmission if the clutch is not disengaged fully in spite of stop the PCM works to increase the intake air for load adjustment. Subsequently, when the driver depresses the clutch pedal fully, the clutch is disengaged and the idle speed increases. The PCM tries to reduce the idle speed to

Although not required by EPA OBD regulations, the CSER monitor is required by CARB OBD regulations and was contained in the certification documentation supplied to EPA.Remedy: Ford plans to co
4828	Some Superduty trucks have a federal calibration with the Cold Start Emission Reduction (CSER), OBD monitor disabled. Although not required by EPA OBD regulations, the CSER monitor is required by CARB OBD regulations and was contained in the certification documentation supplied to EPA.Remedy: Ford plans to co
4829	Some Superduty trucks have a federal calibration with the Cold Start Emission Reduction (CSER), OBD monitor disabled. Although not required by EPA OBD regulations, the CSER monitor is required by CARB OBD regulations and was contained in the certification documentation supplied to EPA.Remedy: Ford plans to co
4830	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of this failure is inappropriate calibration of the PCM.Remedy: When this defect occurs the vehicle likely will be brought to a dealership and diagnosed under emission warranty. A PCM with improved calibration has b
4831	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
4832	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
4833	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
4834	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
4835	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
4836	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
4837	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
4838	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
4839	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
4840	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
4841	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
4842	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
4843	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
4844	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
4845	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
4846	Injection valves are being replaced by dealers for customer complaints of rough idle, hesitation and engine miss fire. Part number 948 605 130 01 is involved.
4847	Injection valves are being replaced by dealers for customer complaints of rough idle, hesitation and engine miss fire. Part number 948 605 130 01 is involved.
4848	Injection valves are being replaced by dealers for customer complaints of rough idle, hesitation and engine miss fire. Part number 948 605 130 01 is involved.
4849	Oxygen sensor 955 606 168 00 is being replaced by dealers based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes. A production change was made in March of 2008 and the concern will continue to be monitored. No report of drivability concerns or emissions impact was provided. U
4850	Oxygen sensor 955 606 168 00 is being replaced by dealers based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes. A production change was made in March of 2008 and the concern will continue to be monitored. No report of drivability concerns or emissions impact was provided. U
4851	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fo
4852	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fo

Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fo
4854	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fo
4855	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
4856	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
4857	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
4858	Malfunction Indicator Lamp (MIL) illumination is alerting owners to failure of the pre-catalyst oxygen sensor part number 997 606 128 02. There is no impact on drivability and the impact on emissions is not known at the time of this report.
4859	Malfunction Indicator Lamp (MIL) illumination is alerting owners to failure of the pre-catalyst oxygen sensor part number 997 606 128 02. There is no impact on drivability and the impact on emissions is not known at the time of this report.
4860	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
4861	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
4862	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
4863	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
4864	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
4865	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
4866	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
4867	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
4868	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
4869	Erroneous fault code C151 is being set in numerous control units because the transmission control unit is set to a configuration that is not recognized by the test equipment. A Technical Service Bulletin was sent to dealers to aid in explaining the concern. A permanent repair is under investigation.
4870	Some vehicles may illuminate the MIL for P1607 (PCM Internal Shutdown Timer Rationality) when no problem exists. The Shutdown Timer Rationality may incorrectly diagnose a problem if the engine fails to properly start and engine speed returns to zero after the key is released.Remedy: Chrysler has issued TSB 18-0
4871	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4872	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4873	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4874	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4875	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4876	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4877	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4878	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4879	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
4880	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
4881	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
4882	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
4883	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
4884	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
4885	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
4886	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
4887	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
4888	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4889	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4890	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4891	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4892	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4893	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4894	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4895	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4896	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
4897	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
4898	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
4899	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
4900	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
4901	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
4902	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
4903	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
4904	Customer complaints of rattling noises from the engine compartment lead technicians to replace the exhaust manifold which includes a catalytic converter. In some instances Diagnostic Trouble Codes of P0430 and P0420 may be stored in the Electronic Control Unit, the majority however did not. Part numbers 996 113
4905	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0446, 0451, 0456 and 0455 result in replacement of the fuel tank vent lines which contains the purge valve. Part number 996 110 129 52 is involved in this concern. There is no impact on emissions as vapors will be sent to the intake r
4906	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0446, 0451, 0456 and 0455 result in replacement of the fuel tank vent lines which contains the purge valve. Part number 996 110 129 52 is involved in this concern. There is no impact on emissions as vapors will be sent to the intake r
4907	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
4908	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
4909	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
4910	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
4911	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
4912	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
4913	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
4914	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
4915	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
4916	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
4917	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
4918	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 601 00. There is no impact on emissions or drivability because the ECU would have to be r
4919	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. 5097	The DTC P0116 code is being set by an incorrect program in the ECM. When P0116 is set other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership fro repair due to the illumination of the MIL. The ECM will be programmed pursuant to Infniti TSB ITB09-010 and a correspon
5098	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5099	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5100	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5101	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5102	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5103	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5104	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5105	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5106	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5107	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5108	An investigation of warranty parts found that a hole can develop by damage from the spot welding used to connect the heat shield to the catalytic converter. The air enters into the catalytic converter through the hole near the rear O2 sensor which causes a MIL for abnormal A/F sensor or catalytic converter because the r
5109	This engine is equipped with a swirl control valve motor and position sensor in the intake manifold. It was found that the swirl control valve position was slightly shifted from the design specification. As a result the MIL was illuminated by the swirl control valve diagnosis of the OBD II system.Remedy: Owners will seek s
5110	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5111	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5112	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5113	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5114	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5115	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5116	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5117	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5118	The exhaust manifold with catalytic converter may experience thermal degradation in the event of prolonged extreme driving conditions. This, in turn, may cause the catalytic converter efficiency to drop and a P0420 DTC code to be set.Remedy: Part quality has been improved with the 2005.5MY running change. Affec
5119	The exhaust manifold with catalytic converter may experience thermal degradation in the event of prolonged extreme driving conditions. This, in turn, may cause the catalytic converter efficiency to drop and a P0420 DTC code to be set.Remedy: Part quality has been improved with the 2005.5MY running change. Affec
5120	The Mass Air Flow Sensor has either a broken or a smudged element. Dust particles collide and break the air flow detecting element. Since the dust particles are of a size that is usually caught by the air cleaner, the cause of dust entry is either that they entered at the time of air cleaner replacement or use of air clean
5121	Some vehicles with 2.7L engines have experienced a MIL illumination with a DTC P2A00 and P2A03 indicating an oxygen sensor malfunction which is in error. The main cause is improper exhaust gas modeling in the PCU. Comparing with actual temperature the modeling temperature is too high after initial cold start, th
5122	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5123	Customer complaints of difficulty filling fuel tank, fuel smell, rough running and Malfunction Indicator Lamp (MIL) illumination may be related to the fuel tank roll over valve. Fuel may enter the Evaporative Emissions System (EVAP) through a poor sealing condition of the roll-over valve. The fuel will migrate to the charc
5124	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5125	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5126	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5127	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5128	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5129	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5130	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5131	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to

5122	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5123	al canister and saturate it, which will allow fuel vapors to enter the atmosphere. An improved part is not available at this time but is in the planning stages. There are no plans for changes in production at this time. Part numbers for fuel tanks 1K0 201 055 AN and 8J0 201 060 H/K were listed in reports.Report 2009/9/2
5124	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5125	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5126	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5127	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5128	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5129	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5130	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5131	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5132	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5133	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5134	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5135	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5136	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5137	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5138	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5139	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5140	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.
5141	modify the threshold fro diagnosing the TPS 1/2 voltage correlation error and replace the original TPS with an improved TPS.

5149	The fuel tank filler tube inlet check valve on some vehicles may not fully close at the end of refueling. This could allow some fuel to escape from the vehicle via the filler neck at the end of refueling.Remedy: Chrysler will conduct Safety Recall (H45) to inspect and, if necessary, replace the fuel tank (with integral fuel fil
5150	The fuel tank filler tube inlet check valve on some vehicles may not fully close at the end of refueling. This could allow some fuel to escape from the vehicle via the filler neck at the end of refueling.Remedy: Chrysler will conduct Safety Recall (H45) to inspect and, if necessary, replace the fuel tank (with integral fuel fil
5151	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5152	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5153	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5154	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5155	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5156	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5157	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5158	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5159	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5160	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5161	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5162	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
5163	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5164	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5165	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5166	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5167	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5168	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5169	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5170	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5171	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5172	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5173	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5174	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5175	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5176	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5177	Customer complaints of rattling noises from the engine compartment lead technicians to replace the exhaust manifold which includes a catalytic converter. In some instances Diagnostic Trouble Codes of P0430 and P0420 may be stored in the Electronic Control Unit, the majority however did not. Part numbers 996 113 1
5178	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0446, 0451, 0456 and 0455 result in replacement of the fuel tank vent lines which contains the purge valve. Part number 996 110 129 52 is involved in this concern. There is no impact on emissions as vapors will be sent to the intake m
5179	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5180	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5181	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5182	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5183	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5184	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5185	Under certain conditions inappropriate calibration causes the deviation of air to fuel ratio compensation factor results in MIL illumination for fuel system.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available fro repair under Running Change/Field Fix #2U and #3N. W
5186	A fault code entry to the DME (engine control unit) control unit (part # 996 618 604 00) is sometimes replaced too early in the process of finding the real problem. Most of them appear not to have a internal fault. Dealership technicians are receiving special training so the DME unit will not be replaced unless a real fau
5187	A fault code entry to the DME (engine control unit) control unit (part # 996 618 604 00) is sometimes replaced too early in the process of finding the real problem. Most of them appear not to have a internal fault. Dealership technicians are receiving special training so the DME unit will not be replaced unless a real fau
5188	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5189	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5190	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5191	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5192	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5193	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5194	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5195	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5196	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
5197	Carbon Canister vent lines are being replaced do to a cracked gasket in the purge valve which is part of the line. Loose rivets or rivets that are out of position may create a condition that causes the gasket to crack. Malfunction Indicator Lamp (MIL) illumination alerts drivers of the concern. An improved part has been m
5198	Malfunction Indicator Lamp (MIL) illumination and numerous fault codes (not reported) have been pinpointed a particular batch of mass air flow (MAF) sensors, part number 955 606 123 00. No emissions, drivability impact or company follow up was reported. Update 1 Dated 12/18/2008 adds model years 2004, 2005, a
5199	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
5200	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, causes Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
5201	Temperature sensor (part #997 606 410 00) is being replaced when the sensor has not been confirmed to be bad. The Engine Control Unit (ECU) uses the instrument clusters time value to calculate/evaluate the engine run time. When the vehicles battery goes dead and the vehicle has to be jump started the clusters ti
5202	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5203	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5204	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5205	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5206	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5207	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5208	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5209	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5210	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5211	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5212	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5213	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5214	There is no specific complaint regarding this component (part no. 997 111 217 70 or 997 111 215 70). Metal exhaust seals located between the turbocharger and catalyst are being replaced in the field. This component is a service part which must be replaced anytime the gasket is removed. For many engine service ope
5215	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5216	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5217	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5218	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5219	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5220	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5221	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause

The effect on emissions is yet to be determined. Porsche has undertaken the following counter measures to address the problem. 1) T
5269	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5270	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5271	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5272	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5273	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5274	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5275	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5276	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5277	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5278	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5279	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5280	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5281	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5282	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.
5283	extended crank time and adds 2008 model year. Report also states production changes were made in August and September of 2005. Update 2008-17-1 adds (2) 2006 Engine Families and updates sales volumes for 2008 Model Years.
5284	extended crank time and adds 2008 model year. Report also states production changes were made in August and September of 2005. Update 2008-17-1 adds (2) 2006 Engine Families and updates sales volumes for 2008 Model Years.
5285	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5286	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5287	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5288	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5289	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5290	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5291	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5292	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5293	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5294	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5295	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmissior
5296	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5297	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5298	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5299	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5300	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5301	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5302	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5303	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5304	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5305	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5306	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5307	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5308	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5309	sions will only be impacted if the gasket is split or has come apart when used in an emissions related area. Part number of the gasket involved is 993 113 258 51.
5310	ility. The manufacturer believes the impact on emissions will be minimal because MIL illumination will send owners to the workshop for repairs.
5311	ility. The manufacturer believes the impact on emissions will be minimal because MIL illumination will send owners to the workshop for repairs.
5312	ility. The manufacturer believes the impact on emissions will be minimal because MIL illumination will send owners to the workshop for repairs.
5313	ility. The manufacturer believes the impact on emissions will be minimal because MIL illumination will send owners to the workshop for repairs.
5314	ility. The manufacturer believes the impact on emissions will be minimal because MIL illumination will send owners to the workshop for repairs.

The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5419	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5420	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5421	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5422	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5423	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5424	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5425	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 2
5426	Under certain conditions, the battery may experience high internal resistance and the OBD system may falsely detect deterioration of IMA battery. The cause of the failure is due to unnecessary coating in the IMA battery cell and inappropriate programming of the PCM and BCMM. Remedy: A PCM with an improved cali
5427	Customer complaints of Malfunction Indicator lamp (MIL) on in association with Diagnostic Trouble Codes (DTC) P0130 and P0150 lead technicians to replace the Oxygen sensor. It has been determined there is a concern of poor internal crimping. The report did not describe any drivability concerns and the emissions im
5428	Customer complaints of Malfunction Indicator lamp (MIL) on in association with Diagnostic Trouble Codes (DTC) P0130 and P0150 lead technicians to replace the Oxygen sensor. It has been determined there is a concern of poor internal crimping. The report did not describe any drivability concerns and the emissions im
5429	Some vehicles may have evaporative emissions leaks due to manufacturing cleanliness and overall seal quality of the flapper door seal in the capless fuel filler neck insert. Remedy: The manufacturer of the capless fuel filler neck insert improved the manufacturing process in March 2008 removing impurities in the doo
5430	Some vehicles may have evaporative emissions leaks due to manufacturing cleanliness and overall seal quality of the flapper door seal in the capless fuel filler neck insert. Remedy: The manufacturer of the capless fuel filler neck insert improved the manufacturing process in March 2008 removing impurities in the doo
5431	The PCM calibration on these vehicles may not adequately control NOx emissions levels under certain operating conditions. Remedy: Chrysler plans to conduct a voluntary emissions recall (J16) on all affected vehicles. The PCM will be reflashed with a compliant calibration.
5432	The component that failed is the catalytic converter assembly. The typical failure is mat erosion. Catalytic elements are related in the converter housing by mat support material. The subject converter assembly includes two catalytic elements wrapped with a single piece of mat support. Some of the catalytic converter a
5433	The component that failed is the catalytic converter assembly. The typical failure is mat erosion. Catalytic elements are related in the converter housing by mat support material. The subject converter assembly includes two catalytic elements wrapped with a single piece of mat support. Some of the catalytic converter a
5434	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5435	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5436	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5437	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5438	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5439	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5440	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5441	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5442	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5443	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5444	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5445	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5446	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5447	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5448	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5449	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5450	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5451	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5452	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5453	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5454	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5455	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5456	Some Throttle Position Sensor/Throttle Actuator assemblies may have been manufactured with contamination which may lead to short circuit. The MIL illuminates.Remedy: Part quality has been improved. When this occurs the vehicle will likely be brought to a dealership and repaired under emissions warranty.
5457	Some Throttle Position Sensor/Throttle Actuator assemblies may have been manufactured with contamination which may lead to short circuit. The MIL illuminates.Remedy: Part quality has been improved. When this occurs the vehicle will likely be brought to a dealership and repaired under emissions warranty.
5458	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5459	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5460	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5461	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5462	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5463	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5464	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5465	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5466	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5467	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5468	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5469	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5470	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5471	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5472	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5473	Some vehicles may have failed Variable Cam Timing (VCT) solenoids due to lack of lubrication and uneven surface finish of the solenoid's rear bearing.Remedy: A pre-lube of the solenoid's rear bearing was added to the engine assembly process on 2/23/2009. Bearings with improved surface finish were launched in e
5474	Some trucks may have dislocated thermostat bypass valves leading to low engine coolant flow and potential illumination of the MIL. The bypass valve can be pulled down the thermostat body by high pressure coolant flow.Remedy: Improved parts were available in service beginning in October 2006 and in production i
5475	Improper Engine Control Module (ECM) calibration detects a leak in the Evaporative Emissions System when there is no leak. Owners are alerted to this concern by Malfunction Indicator Lamp (MIL) illumination. There is no impact on emissions or drivability pertaining to this defect. Vehicles will be corrected at their next
5476	Improper Engine Control Module (ECM) calibration may cause a communication error with the Diagnosis Module for Tank Leakage (DMTL). Different run times after engine shutoff may cause the Malfunction Indicator Lamp (MIL) to illuminate and store fault codes for the DMTL. This concern does not impact emissions or
5477	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5478	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5479	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5480	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5481	Catalysts (particulate matter filter) with improper ceramic substrates were in stalled on a small number of vehicles. The vehicles were built from 11-12-2008 through 1-16-2009. An internal analyses discovered the condition, there will be an impact on emissions but will not cause a concern with drivability. Remedy: Volun
5482	Over tightening of the clamps for the front silencer (muffler) may cause forced vibrations of the exhaust system. These vibrations can cause cracking at the exhaust pipes for the rear silencer which will cause exhaust leaks and noises. Remedy: Vehicles will be repaired at the next workshop visit free of charge. Instru
5483	Failure of the engine thermostat, part number 11537502779, can be caused by either mechanical failure or electrical shorts. Owners are alerted to the failure by Malfunction Indicator Lamp (MIL) illumination. The manufacturer believes there will be minimal impact on emissions because MIL illumination will prompt the o
5484	Thermostat failure is being attributed to certain frequencies caused by constant speed driving. Coolant can seep into the wax element resulting in mechanical damage, seal failure. Technicians are lead to the thermostat based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes (DTC)
5485	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5486	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5487	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5488	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5489	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module. Remedy: The manufacturing process for the FSCM has been
5490	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5491	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5492	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5493	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5494	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5495	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re

This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5505	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5506	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5507	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5508	A change in the Engine Control Module (ECM) 038 906 016 H, 038 906 016 Q and 038 906 016 AG software is being initiated to improve emissions durability on manual transmission vehicle only. There was no change during vehicle production but the software upgrade is available for service. Remedy: A Voluntary Emis
5509	A change in the Engine Control Module (ECM) 038 906 016 H, 038 906 016 Q and 038 906 016 AG software is being initiated to improve emissions durability on manual transmission vehicle only. There was no change during vehicle production but the software upgrade is available for service. Remedy: A Voluntary Emis
5510	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfe
5511	Complaints of Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Code (DTC) P0299 lead technicians to replace the Turbocharger Re-circulation Valve. Production part number 06F 145 710 C is being replaced by part 06F 145 710 G. Analysis of returned parts determined the membranes had cracked.
5512	Complaints of Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Code (DTC) P0299 lead technicians to replace the Turbocharger Re-circulation Valve. Production part number 06F 145 710 C is being replaced by part 06F 145 710 G. Analysis of returned parts determined the membranes had cracked.
5513	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
5514	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5515	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5516	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5517	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5518	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5519	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5520	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5521	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5522	Electrical noise on the Camshaft Position Sensor circuit can cause the Application Specific Integrated Circuit (ASIC) that monitors Crankshaft and Camshaft Position Sensor output to momentarily lose synchronization and set a fault for either P0340 (Camshaft Position Sensor Circuit) or P0344 (Camshaft Position Sensor C
5523	Electrical noise on the Camshaft Position Sensor circuit can cause the Application Specific Integrated Circuit (ASIC) that monitors Crankshaft and Camshaft Position Sensor output to momentarily lose synchronization and set a fault for either P0340 (Camshaft Position Sensor Circuit) or P0344 (Camshaft Position Sensor C
5524	Malfunction Indicator Lamp (MIL) on with Diagnostic Trouble Code (DTC) P0706 (transmission range sensor circuit performance) is related to the Transmission Control Module (TCM). This concern only involves the Continuously Variable Transmission (CVT). Other symptoms associated with this failure are shifter display f
5525	The DTC P0116 code is being set by an incorrect program in the ECM. When P0116 is set other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership fro repair due to the illumination of the MIL. The ECM will be programmed pursuant to Infniti TSB ITB09-010 and a correspon
5526	The DTC P0116 code is being set by an incorrect program in the ECM. When P0116 is set other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership fro repair due to the illumination of the MIL. The ECM will be programmed pursuant to Infniti TSB ITB09-010 and a correspon
5527	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5528	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5529	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5530	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5531	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5532	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5533	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5534	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production

	O
5545	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5546	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into production
5547	The P0128 DTC code for thermostat function is being sent on a small number of 2007MY 2.5L Altima and 2.0L Sentra vehicles. This DTC is being set by an incorrect program in the ECM.Remedy: Affeccted vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be reprog
5548	The P0128 DTC code for thermostat function is being sent on a small number of 2007MY 2.5L Altima and 2.0L Sentra vehicles. This DTC is being set by an incorrect program in the ECM.Remedy: Affeccted vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be reprog
5549	The P0128 DTC code for thermostat function is being sent on a small number of 2007MY 2.5L Altima and 2.0L Sentra vehicles. This DTC is being set by an incorrect program in the ECM.Remedy: Affeccted vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be reprog
5550	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5551	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5552	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5553	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5554	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5555	Some 2004 and 2005 Model Year Nissans have exhaust manifold problems. The exhaust manifold develops slight cracks due to stress caused by the exhaust temperature. Nissan improved the exhaust manifold by adding a reinforcement rib to the area where the crack occurred.
5556	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5557	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5558	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5559	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5560	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5561	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5562	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5563	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5564	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5565	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5566	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5567	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5568	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5569	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5570	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5571	The P0133 DTC for A/F sensor circuit is being set on the 2008MY Altima Hybrid. This DTC is being set due to a programming issue with the ECM. When the P0133 DTC sets other OBD monitors may not complete. Also the internal parts ordering system may have allowed the dealer to replace the A/F sensor in the 2008
5572	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5573	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5574	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5575	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5576	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5577	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5578	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5579	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the val
5580	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the val
5581	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the val
5582	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the val
5583	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the val
5584	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5585	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5586	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5587	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure

Such contamination may be generated from a press-fit joining process that is used in manufacturing the injectors.Remedy: Improvements to the fuel injector manufacturing process to elim
5641	Some vehicles with 5.4L engine may have malfunctioning fuel injectors (stuck open or stuck closed) due to internal contamination. Such contamination may be generated from a press-fit joining process that is used in manufacturing the injectors.Remedy: Improvements to the fuel injector manufacturing process to elim
5642	Oxygen sensors, (Part Nos. 94860612902, 94860612802) are being replaced in the field for setting diverse fault codes. A pattern has not yet emerged as to a specific root cause. Update 1 states: A production change was made February, 18 2004 by the supplier and reports of replacements are tapering off. But yet this
5643	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
5644	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
5645	The evaporative system's check valves (Part No. 955 605 517 00) have been replaced on the Cayenne V6 models due to a Malfunction Indicator Lamp (MIL) on condition. The check valve contains a purge valve which may have contained rivets that were out of tolerance causing the gasket within to crack. Check valves w
5646	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
5647	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
5648	Concerns of engines being hard to start and Malfunction Indicator Lamp (MIL) illumination may be associated with engine temperature sensor failure. The manufacturer has no follow up plans at this time. Part numbers involved are 955 106 125 00 and 955 106 125 01. Update 1 adds 2009 Engine Family and updates s
5649	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
5650	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
5651	Rough running engine and Malfunction Indicator Lamp (MIL) illumination have been linked to ignition coil failure. The involved coil, part number 997 602 104 00, has an integrated plug connector. No manufacturer follow up is planned at this time because they feel these are random cases.Update 1 adds (4) 2004, (5) 2
5652	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P044 may be caused by a concern with fuel tank vent lines. There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
5653	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
5654	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fol
5655	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5656	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
5657	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
5658	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 604 02. There is no impact on emissions or drivability because the ECU would have to be r
5659	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 604 02. There is no impact on emissions or drivability because the ECU would have to be r
5660	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5661	Owner concerns of Malfunction Indicator Lamp (MIL) illumination are related to coolant temperature sensors, part number 997 606 420 00. There also is a potential for cold start issues with a failed part. A production change was made in 2/5/2009. Update 1 adds 1 Engine Family and updates sales volumes.Update 2 A
5662	Failure of the Cooling Fan Control Units may cause either engine overheating or the cooling fan will stay on all the time. Engine overheating will set codes in the Engine Control Unit which may turn on the Malfunction Indicator Light (MIL). Part numbers 997 618 436 02 and 997 618 436 91 are involved and have been re

	O
5743	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5744	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5745	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5746	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5747	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5748	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5749	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5750	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5751	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5752	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5753	Catalytic converters are being replaced for complaints of rattling noises, Malfunction Indicator Lamp (MIL) illumination and various fault codes. Part numbers involved are 987 113 111 00, 987 113 111 04, 987 113 111 05, 987 113 112 00, 987 113 112 05, 987 113 113 02, 987 113 113 03, 987 113 114 00 or 987 113
5754	Catalytic converters are being replaced for complaints of rattling noises, Malfunction Indicator Lamp (MIL) illumination and various fault codes. Part numbers involved are 987 113 111 00, 987 113 111 04, 987 113 111 05, 987 113 112 00, 987 113 112 05, 987 113 113 02, 987 113 113 03, 987 113 114 00 or 987 113
5755	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0030, P0130, P3266 and P3255 relate to front oxygen sensor concerns. Part numbers 06F 906 262 AC and 06E 906 265 C are involved, the failure is related to improper crimping of the wires to the inside the sensor. The vendor for this
5756	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5757	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5758	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5759	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5760	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
5761	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfe
5762	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns are related to the catalytic converters which are being replaced by part numbers 3C0 254 502 TX, 3C0 254 503 PX and 3C0 254 504 BX. Vehicles ex
5763	Malfunction Indicator Light (MIL) illumination and related Diagnostic Trouble Codes (DTC), P0421 and P0431, lead to the replacement of the Pre-catalysts (warm up). Emission tests performed indicate the vehicle performs within emission standards. Part numbers 4E0 254 501 AX, 4E0 254 501 X, 4FD 254 503 CX, 8E0 2
5764	Owner complaints of Malfunction Indicator Light (MIL) illumination associated with Diagnostic Trouble Code (DTC) P0420 have resulted in catalytic converter replacement. The manufacturer believes the concern was caused by too sensitive of monitoring software. In some cases the converter was replaced because of nois
5765	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5766	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5767	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5768	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5769	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5770	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5771	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5772	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5773	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5774	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5775	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5776	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5777	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5778	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5779	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o

In some cases a fault code (not provided) is set but no pattern has emerged. No information was provided for the actual part being replaced that corrects the concern. They
5908	Owner concerns of Malfunction Indicator Lamp (MIL) illumination or the engine cooling fan not running may be related to a defective temperature sensor. Engine over heating while driving at slow speeds on warm days may also be experienced. Part number 997 606 213 00. The replaced parts have not reached the requ
5909	Owner concerns of Malfunction Indicator Lamp (MIL) illumination or the engine cooling fan not running may be related to a defective temperature sensor. Engine over heating while driving at slow speeds on warm days may also be experienced. Part number 997 606 213 00. The replaced parts have not reached the requ
5910	On some Cayenne Turbo vehicles the oil separator was faulty and could leak oil into the intercooler hoses. The technician would assume there was a bad seal in the turbocharger; then replace the pressure hoses, turbo and flush the intercooler, or they would replace the oil separator and pressure hoses. Examine the pre
5911	Vehicles equipped with 3.6L engines have been built with an incorrect engine control module fuel tank capacity calibration. Using this calibration the engine control module will underestimate the actual fuel volume used for OBD enablement. OBD intended to enable at actual fuel volumes between 15-85% will be enable
5912	Vehicles equipped with 3.6L engines have been built with an incorrect engine control module fuel tank capacity calibration. Using this calibration the engine control module will underestimate the actual fuel volume used for OBD enablement. OBD intended to enable at actual fuel volumes between 15-85% will be enable
5913	Vehicles equipped with 3.6L engines have been built with the secondary fuel level sender OBD disabled. In the presence of a secondary fuel level sender malfunction the OBD system will not store a DTC or illuminate the MIL. Primary fuel level sender diagnostics operate as intended. Other OBDs that use fuel level as
5914	Vehicles equipped with 3.6L engines have been built with the secondary fuel level sender OBD disabled. In the presence of a secondary fuel level sender malfunction the OBD system will not store a DTC or illuminate the MIL. Primary fuel level sender diagnostics operate as intended. Other OBDs that use fuel level as
5915	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
5916	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
5917	During the transportation from the production plant to the customer, the engine is started frequently for a very short time without ever reaching regular driving conditions. This can cause fouling on the Spark Plug (Part No. 999 170 218 90) and the spark plugs have to be replaced. The problem is obvious to the driver (r
5918	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure. Update 1 dated 9/19/2007 changes sales volume from 2,068 to 1,906 and to include GT2.Update 2 da
5919	A reprogramming error has resulted in an incorrect MIL illumination for DTC P0011. The OBD programming incorrectly causes the MIL to illuminate even though the VTC is functioning properly.Remedy: A TSB has been issued that instructs the dealers on how to perform ten repair which includes reprogramming of the E
5920	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, would cause Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
5921	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5922	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5923	Fuel tanks are being replaced for complaints of hard refueling, in some cases the anti-spit-back valve was not welded correctly. Fuel tank part numbers 955 201 075 10, 955 201 075 11, 955 201 075 12, 955 201 075 13, and 955 201 075 15 are involved. No drivability or emissions related concerns were provided. A pro
5924	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
5925	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
5926	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
5927	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
5928	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
5929	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
5930	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
5931	Malfunction Indicator Lamp (MIL) illumination is alerting owners to failure of the pre-catalyst oxygen sensor part number 997 606 128 02. There is no impact on drivability and the impact on emissions is not known at the time of this report.
5932	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5933	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
5934	Concerns of the Automatic Transmission Fluid (ATF) sensor not opening at the appropriate time may cause a loss of comfort during shifting. This concern is most noticeable when the outside temperature is low. The ATF sensor, part number 955 307 027 01, will be replaced at the next workshop visit regardless of a cus
5935	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
5936	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis
5937	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis

5988	The OBD system may falsely detect a misfire during warm up. The cause of the failure is inappropriate calibration of the OBD system. Remedy: ECM software with an improved calibration is made available for repair under Field Fix#4A. When this defect occurs the MIL illuminates the vehicle will likely be brought to a
5989	The OBD system may falsely detect a misfire during warm up. The cause of the failure is inappropriate calibration of the OBD system. Remedy: ECM software with an improved calibration is made available for repair under Field Fix#4A. When this defect occurs the MIL illuminates the vehicle will likely be brought to a
5990	The OBD system may falsely detect a misfire during warm up. The cause of the failure is inappropriate calibration of the OBD system. Remedy: ECM software with an improved calibration is made available for repair under Field Fix#4A. When this defect occurs the MIL illuminates the vehicle will likely be brought to a
5991	Due to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5992	Due to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5993	Due to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5994	Due to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5995	Due to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5996	DDue to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5997	DDue to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5998	DDue to an inappropriate strategy for thermostat failure detection monitoring in PCM the failure may be erroneously judged in spite of proper thermostat operation. It may result in MIL illumination. This happens when stop and go is repeated while turning a heater on with high blower air volume right after a cold start.
5999	Due to high voltage requirement for Canister Vent Valve (CVV) solenoid operation, when battery voltage is low, CVV may not be closed completely. When evaporative leak detection monitoring is carried out under this condition, the PCM may detect an opening of CVV as leakage resulting in MIL illumination. Remedy:
6000	Due to high voltage requirement for Canister Vent Valve (CVV) solenoid operation, when battery voltage is low, CVV may not be closed completely. When evaporative leak detection monitoring is carried out under this condition, the PCM may detect an opening of CVV as leakage resulting in MIL illumination. Remedy:
6001	Due to high voltage requirement for Canister Vent Valve (CVV) solenoid operation, when battery voltage is low, CVV may not be closed completely. When evaporative leak detection monitoring is carried out under this condition, the PCM may detect an opening of CVV as leakage resulting in MIL illumination. Remedy:
6002	When battery voltage becomes too low both main and sub computers in PCM stop operating. When battery voltage returns to normal the main computer restores itself, however, the sub computer does not. As a result the main computer diagnoses the sub computer malfunction resulting in MIL illumination. Remedy:
6003	When battery voltage becomes too low both main and sub computers in PCM stop operating. When battery voltage returns to normal the main computer restores itself, however, the sub computer does not. As a result the main computer diagnoses the sub computer malfunction resulting in MIL illumination. Remedy:
6004	The OBD Valve Timing Control (VTC) counter was initialized incorrectly in 2684 ECM's for the 2010MY Maxima. An incorrect hexadecimal value was used as the initial value in the numerator and denominator that would bias the counter result toward 1.0 (previous MY results were approximately 2.0 with a standard of 0.33
6005	The OBD Valve Timing Control (VTC) counter was initialized incorrectly in 2684 ECM's for the 2010MY Maxima. An incorrect hexadecimal value was used as the initial value in the numerator and denominator that would bias the counter result toward 1.0 (previous MY results were approximately 2.0 with a standard of 0.33
6006	Poor smoothness during acceleration.
6007	Poor smoothness during acceleration.
6008	Poor smoothness during acceleration.
6009	Poor smoothness during acceleration.
6010	Poor smoothness during acceleration.
6011	Poor smoothness during acceleration.
6012	Poor sealing fuel caps (part number 16116756772) may cause illumination of the Malfunction Indicator Lamp (MIL). Approximately 55% of the returned caps tested okay and it is assumed the operator did not turn the cap tight enough. Evaporative Emissions may be exceeded if the cap has not sealed properly. There i
6013	Inaccurate fuel gauge readings cause low fuel levels which in turn may cause no or poor starting, engine running rough and Malfunction Indicator Lamp (MIL) illumination. The root cause has been pinpointed to a poor electrical connection at the fuel sender itself. A loose connector, open circuit, causes the fuel gauge to
6014	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
6015	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
6016	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
6017	Some vehicles may experience MIL illumination and the storage of DTC P0420 (catalyst system efficiency below threshold). Under certain severe driving patterns such as high speed highway/uphill driving and/or accelerating with high engine revolutions the deterioration of the vehicles' catalytic converter can progress be

Other owner complaints, pertaining to fuel caps, concern the tether or magnetic refueling stowage feature. Review of warranty claims revealed a high number of incidents where the caps were mi
6070	On some vehicles the variable valve timing (VVT) actuator lock pin hole may wear out due to insufficient abrasion durability causing a loud ticking noise form the VVT when the lock pin is activated during cold start. Remedy: Mazda issued a repair procedure to assist service technicians in diagnosing and correcting this
6071	On some vehicles the variable valve timing (VVT) actuator lock pin hole may wear out due to insufficient abrasion durability causing a loud ticking noise form the VVT when the lock pin is activated during cold start. Remedy: Mazda issued a repair procedure to assist service technicians in diagnosing and correcting this
6072	On some vehicles the variable valve timing (VVT) actuator lock pin hole may wear out due to insufficient abrasion durability causing a loud ticking noise form the VVT when the lock pin is activated during cold start. Remedy: Mazda issued a repair procedure to assist service technicians in diagnosing and correcting this
6073	On some vehicles the variable valve timing (VVT) actuator lock pin hole may wear out due to insufficient abrasion durability causing a loud ticking noise form the VVT when the lock pin is activated during cold start. Remedy: Mazda issued a repair procedure to assist service technicians in diagnosing and correcting this
6074	On some vehicles the variable valve timing (VVT) actuator lock pin hole may wear out due to insufficient abrasion durability causing a loud ticking noise form the VVT when the lock pin is activated during cold start. Remedy: Mazda issued a repair procedure to assist service technicians in diagnosing and correcting this
6075	On some vehicles the variable valve timing (VVT) actuator lock pin hole may wear out due to insufficient abrasion durability causing a loud ticking noise form the VVT when the lock pin is activated during cold start. Remedy: Mazda issued a repair procedure to assist service technicians in diagnosing and correcting this
6076	On some vehicles the variable valve timing (VVT) actuator lock pin hole may wear out due to insufficient abrasion durability causing a loud ticking noise form the VVT when the lock pin is activated during cold start. Remedy: Mazda issued a repair procedure to assist service technicians in diagnosing and correcting this
6077	The P0461, P0462 or P0463 DTCs for the fuel level sensor are being set on a number of Altima vehicles. The issue is under investigation and is currently believed to be due to contamination of the fuel level sensor unit. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination
6078	The P0461, P0462 or P0463 DTCs for the fuel level sensor are being set on a number of Altima vehicles. The issue is under investigation and is currently believed to be due to contamination of the fuel level sensor unit. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination
6079	The P0461, P0462 or P0463 DTCs for the fuel level sensor are being set on a number of Altima vehicles. The issue is under investigation and is currently believed to be due to contamination of the fuel level sensor unit. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination
6080	The P1421 DTC for intake air low pressure switch circuit high voltage is being set on some Versa 1.8L vehicles. This DTC is being set by a programming irregularity in the ECM. Remedy: A TSB is being created and will be distributed for this issue that instructs dealers to reprogram the ECM.
6081	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6082	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6083	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6084	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6085	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6086	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6087	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6088	Some vehicles with 3.5L or 3.7L engines may experience binding of the Variable Cam Timing (VCT) system. This condition may be caused by excessive oil pressure internal to the VCT phaser which can cause it to bind and not phase as commanded. Remedy: The VCT phaser design was changed, adding an oil pressu
6089	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6090	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6091	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso

	O
6139	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6140	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6141	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6142	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6143	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6144	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6145	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6146	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6147	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6148	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6149	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6150	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6151	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6152	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
6153	A spark plug may loosen due to inappropriate spark plug gasket material resulting in misfires due to either spark jumping through gaps in spark plug insulator or heat damage to the ignition coil. The MIL illuminates. Remedy: When this defect occurs the vehicle will likely be brought to a dealership and diagnosed un
6154	A spark plug may loosen due to inappropriate spark plug gasket material resulting in misfires due to either spark jumping through gaps in spark plug insulator or heat damage to the ignition coil. The MIL illuminates. Remedy: When this defect occurs the vehicle will likely be brought to a dealership and diagnosed un
6155	Some vehicles may experience MIL illumination and the storage of DTC P0420 (catalyst system efficiency below threshold). Under certain severe driving patterns such as high speed highway/uphill driving and/or accelerating with high engine revolutions the deterioration of the vehicles' catalytic converter can progress be
6156	Some vehicles may experience MIL illumination and the storage of DTC P0420 (catalyst system efficiency below threshold). Under certain severe driving patterns such as high speed highway/uphill driving and/or accelerating with high engine revolutions the deterioration of the vehicles' catalytic converter can progress be
6157	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
6158	Reports from customers of no start conditions have been determined to be caused by hoses with in the fuel pump splitting. When the hoses split the pump cannot deliver adequate amount of fuel to the engine. Part numbers 996 620 057 90, 996 620 057 91 and 996 620 057 92 are involved. There is no effect on emis
6159	Inaccurate fuel level readings after refueling is caused by the fuel level sensor float contacting fuel pressure pipe inside the fuel tank. Part numbers involved are 966 620 833 02 and 966 620 833 01. Technical Service Bulletin (TSB) #2066 has been issued to dealerships to help technicians resolve the concern. The TSB
6160	Inaccurate fuel level readings after refueling is caused by the fuel level sensor float contacting fuel pressure pipe inside the fuel tank. Part numbers involved are 966 620 833 02 and 966 620 833 01. Technical Service Bulletin (TSB) #2066 has been issued to dealerships to help technicians resolve the concern. The TSB
6161	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure.
6162	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
6163	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
6164	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
6165	Poor crimping of the heater wire inside the Oxygen sensor causes Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 606 128 30 and 655 606 129 30 are involved in this report. An improved crimping process was introduced at the supplier in December 2007. Update 1 adds two part numbers, 955 606 136
6166	The component that failed is the evaporative canister purge solenoid valve. The typical failures are the valve sticking open or closed position. The probable cause of failures is either improper centering of the armature plate during the component manufacturing assembly process or oil on the armature plate during the
6167	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
6168	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
6169	Customer complaints of hesitation, lack of power, hard or no start and Malfunction Indicator Lamp (MIL) illumination are being pinpointed to fuel pumps. Part numbers 997 620 127 00 have been reported. Failed parts are currently being collected and tested to determine the cause of the failures.
6170	Failure of high pressure fuel injectors are causing rough running and Malfunction Indicator Lamp (MIL) illumination. Part numbers 9A1 110 128 10 or 9A1 110 128 00, built with in a specific date range, are being recalled from dealerships per Parts Withdraw Bulletin D39. Drivability and emissions will be impacted during t
6171	On some vehicles equipped with 6.1L engines and a manual transmission the OBD calibrations for the Upstream Oxygen Sensor Slow Response Diagnostics are overly sensitive and may cause malfunction indicator lamp (MIL) illumination for diagnostic trouble codes P0133 or P0153 when no problem exists.Remedy: Ch
6172	Some vehicles equipped with a 3.8L engine and a 42RLE automatic transmission may power up in default mode limiting operation to a single forward gear ratio (2nd). An Electronic Throttle Control (ETC) reset during cranking can cause the transmission relay test to be bypassed and result in the transmission operating
6173	Some vehicles equipped with 2.0L engines may experience excess NOx production due to a fuel adaptation error when it transitions between fuel containing different quantities of ethanol (0-10%). The fuel adaptation system is capable of recognizing different fuel conditions and adapting the fuel/air ratio to address ch
6174	Some vehicles equipped with 2.0L engines may experience excess NOx production due to a fuel adaptation error when it transitions between fuel containing different quantities of ethanol (0-10%). The fuel adaptation system is capable of recognizing different fuel conditions and adapting the fuel/air ratio to address ch
6175	No start, rough running and hesitation complaints from owners have lead to the replacement of fuel pump 996 620 133 00. There were also three complaints of vehicle stalling. A parts withdrawal bulletin was issued to dealers on 8/24/2009 to return all pumps in stock for testing.
6176	No start, rough running and hesitation complaints from owners have lead to the replacement of fuel pump 996 620 133 00. There were also three complaints of vehicle stalling. A parts withdrawal bulletin was issued to dealers on 8/24/2009 to return all pumps in stock for testing.
6177	Diagnostic Trouble Code (DTC) code P2400 stored in the Engine Control Unit (ECU) memory with a low idle concern is considered erroneous. The ECU must be reprogrammed to the latest software to eliminate the concern. There is no information provided on drivability or emissions concerns. A technical service bulletin w
6178	High pressure fuel pumps (955 110 316 00) are being replaced based on rough running or extended crank time to start. The manufacturer believes these pumps are being replaced in conjunction with low pressure pump replacement. A new fuel pump has been introduced as a replacement. Update 1 dated 3/8/2010 ad
6179	High pressure fuel pumps (955 110 316 00) are being replaced based on rough running or extended crank time to start. The manufacturer believes these pumps are being replaced in conjunction with low pressure pump replacement. A new fuel pump has been introduced as a replacement. Update 1 dated 3/8/2010 ad
6180	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6181	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6182	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6183	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6184	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6185	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6186	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6187	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6188	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6189	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6190	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6191	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6192	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6193	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6194	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0021 or P0011 lead technicians to replace the camshaft. It has been determined that an inner oil sleeve of the camshaft comes loose and blocks the flow of oil. With lack of proper oil flow the camshaft may stop or stick and cause
6195	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0021 or P0011 lead technicians to replace the camshaft. It has been determined that an inner oil sleeve of the camshaft comes loose and blocks the flow of oil. With lack of proper oil flow the camshaft may stop or stick and cause
6196	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0021 or P0011 lead technicians to replace the camshaft. It has been determined that an inner oil sleeve of the camshaft comes loose and blocks the flow of oil. With lack of proper oil flow the camshaft may stop or stick and cause
6197	Catalytic converters are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No other information was provided pertaining to drivability or emissions. The manufacturer will continue to monitor returned parts. Part numbers 987 113 107 03, 987 113 107 05, 987 113 108 03, and 987 113 108 05 were repo
6198	Catalytic converters are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No other information was provided pertaining to drivability or emissions. The manufacturer will continue to monitor returned parts. Part numbers 987 113 107 03, 987 113 107 05, 987 113 108 03, and 987 113 108 05 were repo
6199	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nur
6200	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nur
6201	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nur
6202	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nur
6203	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nur
6204	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nur
6205	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nur
6206	A fault indicating a defect in the fuel tank leakage diagnosis system may be entered in the Engine Control Unit (ECU) memory during engine start up. When the fault is registered in the ECU it may illuminate the Malfunction Indicator Lamp (MIL). A Workshop Campaign was issued to correct the software issue.
6207	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6208	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6209	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6210	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6211	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6212	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6213	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6214	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6215	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6216	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6217	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Code (DTC) P2270. Part number involved in this possible defect is 997 606 138 02.
6218	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Code (DTC) P2270. Part number involved in this possible defect is 997 606 138 02.
6219	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6220	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6221	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6222	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6223	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6224	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6225	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6226	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6227	Catalytic Converters are being replace based on Diagnostic Trouble Codes P0421 and 0431. Manufacturer analysis of returned parts shows there was no malfunction and the codes may be related to damaged oxygen sensors. Part numbers of replaced converters are 997 113 109 32, 997 113 109 33, 997 113 110 32 an
6228	Owners complaints of Malfunction Indicator Lamp (MIL) illumination and rattling noises from under the vehicle have been pinpointed to the catalytic converter. The manufacturer believes the rattling noise will lead the owner to go directly to the dealer for repairs. A new part was introduced into production during Calendar
6229	Owners complaints of Malfunction Indicator Lamp (MIL) illumination and rattling noises from under the vehicle have been pinpointed to the catalytic converter. The manufacturer believes the rattling noise will lead the owner to go directly to the dealer for repairs. A new part was introduced into production during Calendar
6230	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6231	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6232	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6233	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6234	The P1138 DTC code for swirl control valve is being set on some vehicles with 1.8L California certified vehicles. This DTC is being set by a programming error that does not recognize linkage wear. Remedy: A TSB is being crated and will be distributed for this issue that instructs dealership technicians to reprogram the
6235	The P1138 DTC code for swirl control valve is being set on some vehicles with 1.8L California certified vehicles. This DTC is being set by a programming error that does not recognize linkage wear. Remedy: A TSB is being crated and will be distributed for this issue that instructs dealership technicians to reprogram the
6236	The P1138 DTC code for swirl control valve is being set on some vehicles with 1.8L California certified vehicles. This DTC is being set by a programming error that does not recognize linkage wear. Remedy: A TSB is being crated and will be distributed for this issue that instructs dealership technicians to reprogram the
6237	Excessive wear of the throttle body (C2C20540 & C2C20541) at the throttle position sensor creates numerous customer concerns. They have experienced rough running, restricted performance and illumination of the Malfunction Indicator Lamp. The manufacturer believes there is no adverse impact on emissions becaus
6238	Some 2010 vehicles equipped with 2.0L engines [PVEZ] have experienced a false MIL illumination with a DTC P0304 set, indicating a cylinder 4 misfire after initial cold start. Under certain cold start conditions the misfire detection system threshold can be improved incorrect and a resultant rough idle condition due to the
6239	Some 2009MY vehicles equipped with 3.3L engines may experience MIL illumination accompanied by DTC P0133 and/or P0153 indicating a slow response malfunction of the front oxygen sensor. During the production process foreign material contamination of some oxygen sensor elements may have occurred. This co
6240	Some 2009MY vehicles equipped with 3.3L engines may experience MIL illumination accompanied by DTC P0133 and/or P0153 indicating a slow response malfunction of the front oxygen sensor. During the production process foreign material contamination of some oxygen sensor elements may have occurred. This co
6241	Some 2009MY vehicles equipped with 3.3L engines may experience MIL illumination accompanied by DTC P0133 and/or P0153 indicating a slow response malfunction of the front oxygen sensor. During the production process foreign material contamination of some oxygen sensor elements may have occurred. This co
6242	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6243	Owner complaints of Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) lead technicians to replace the fuel pressure sensor. DTC's P008B low pressure too high and 310B low fuel pressure out of tolerance. The warranty replacement part number furnished in the report is 06E 9
6244	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6245	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6246	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6247	As a result of consumer satisfaction surveys Kia has become aware that some 2010MY Forte's equipped with 2.0L engines have experienced slight shift hesitation or shift delay (2nd-3rd gear shift). This hesitation is not a significant drivability concern but has been noted as a minor dissatisfaction with some customers.
6248	As a result of consumer satisfaction surveys Kia has become aware that some 2010MY Forte's equipped with 2.0L engines have experienced slight shift hesitation or shift delay (2nd-3rd gear shift). This hesitation is not a significant drivability concern but has been noted as a minor dissatisfaction with some customers.
6249	As a result of consumer satisfaction surveys Kia has become aware that some 2010MY Forte's equipped with 2.0L engines have experienced slight shift hesitation or shift delay (2nd-3rd gear shift). This hesitation is not a significant drivability concern but has been noted as a minor dissatisfaction with some customers.
6250	Incorrect "Emissions Tune Up Labels", printed with incorrect Engine Family number, were installed on certain Volkswagen vehicles. Part numbers 3C0 010 704 G and 1K0 010 716 Q were reported. A Required Vehicle Update (RVU) bulletin has been sent to dealers to correct vehicles in stock before the vehicles are sold. S
6251	The P1421 DTC for Intake Air Low Pressure Switch Circuit High Voltage is being set on some vehicles. This DTC is being set due to a programming irregularity in the ECM. Remedy: A Nissan TSB is being created and will be distributed for this issue that instructs the dealers to reprogram the ECM.
6252	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6253	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6254	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6255	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6256	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6257	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6258	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6259	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6260	The P0463 DTC for the fuel level sensor is being set on a number of vehicles. The issue is under investigation and is believed to be due to contamination of the fuel level sensor unit. Remedy: Affected vehicles will likely be brought in for service due to illumination of the MIL. The fuel level sensor unit will be replaced
6261	The P0463 DTC for the fuel level sensor is being set on a number of vehicles. The issue is under investigation and is believed to be due to contamination of the fuel level sensor unit. Remedy: Affected vehicles will likely be brought in for service due to illumination of the MIL. The fuel level sensor unit will be replaced
6262	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6263	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6264	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6265	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6266	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6267	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6268	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6269	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6270	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6271	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6272	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6273	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6274	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6275	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6276	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6277	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6278	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6279	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6280	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6281	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6282	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6283	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6284	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6285	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6286	Fuel nozzle shuts off prematurely. Remedy: Improved replacement parts (without filter element) are available for service application.
6287	MIL may illuminate due to melting of the monolith catalyzer. Remedy: No further follow-up action is planned since owners are expected to return their vehicle for service if the condition occurs.
6288	Malfunction Indicator Lamp (MIL) illumination with trouble codes P0118, P0117 and P0116 stored in the Engine Control Units (ECU) memory may be the result of the Engine Coolant Sensor (ECT) failing. Failures are attributed to internal electrical concerns of part number 059 919 501 A. The effect on emissions and dri
6289	On certain 2005 model year E 320 CDI diesel vehicles, the EGR valves have been replaced following customer complaints regarding the vehicle ECU putting the vehicle into a limp home mode. May illuminate the MIL. The company improved the EGR valve design through the reduction in tolerance of the valve stem to li
6290	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6291	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6292	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6293	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6294	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6295	Incorrect "Emissions Tune Up Labels", printed with incorrect Engine Family number, were installed on certain Volkswagen vehicles. Part number 1K0 010 704 E was installed and 1K0 010 715 is the correct label. A Required Vehicle Update (RVU) bulletin has been sent to dealers to correct vehicles in stock before the vehic
6296	Sone vehicles e/w Siemens EMS, OBD readiness codes are not reset to "INCOMPLETE" after neg. term of battery is disconnected; readiness codes are displayed as "COMPLETE." This is a scan tool display error and Hyundai's assessment is this condition does not affect emission performance or driveability. The ECMs will

6337	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6338	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6339	Some Accelerator Pedal Position Sensor connectors may lose connection due to weak locking tabs. This may lead to low power or intermittent hesitation conditions. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to
6340	Fluctuations in engine speed under idle, and near idle conditions. There were no Malfunction Indicator Lamp (MIL) illumination or Diagnostic Trouble codes (DTC) resulting from this customer complaint. Bentley Motors considers the described idle fluctuation to be strictly a customer satisfaction related issue. The Engine C
6341	Some vehicles have experienced rough engine idling during the initial cold start-up period. To improve this condition Hyundai has refined the engine control module program to more properly regulate the fuel injection control during the subject condition.Remedy: Hyundai will publish a TSB to provide repair information
6342	Some vehicles equipped with 1.6L engines have experienced a MIL-on as a result of a knock sensor malfunction (codes: P0325/P0326/P0327/P0328). The main cause of this condition is a corrosion of inner part due to lack of drying time in the manufacturing process. The internal corrosion may result in an intermitter
6343	Some vehicles with automatic transmission may experience a downshift bump at 2nd or 3rd gear when decelerating to a stop. This downshift bump does not appreciably affect either vehicle emission control or drivability but is a discernable factor in relation to smoothness of operation. This matter has been noticed in a
6344	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6345	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6346	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6347	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6348	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6349	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6350	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6351	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6352	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6353	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6354	An incorrect Fuel Tank Cover Label was installed on this model. The label states that fuel with 50 ppm sulfur content may be used in the vehicle, the label should read Ultra Low Sulfur Diesel. A Required Vehicle Update (RVU) was issued to dealers. There is no impact on emissions or drivability. Most vehicles will be corre
6355	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6356	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6357	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6358	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6359	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6360	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6361	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6362	The fuel pump mounting flange may develop stress cracks due temperature cycling. This defect is more likely to appear in hot climate regions. Common symptoms are fuel smell and occasionally hard starting/longer crank times. The fuel pump was improved for use in production in mid 2005 this pump is also used in s
6363	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the malfunction indicator light illumination with a DTC P0130 indicating an open circuit of a front bank 1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical conti
6364	Fuel Level Sending Units may have erratic operation caused by oxidation of the fuel level sensing plate. The fuel sensor is part of the fuel pump, part numbers 8616811, 8634832, 30636948 and 30794757 have been reported. There is no impact on emissions or drivability unless one was to run out of fuel. Analysis of t
6365	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the malfunction indicator light illumination with a DTC P0130 indicating an open circuit of a front bank 1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical conti
6366	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the malfunction indicator light illumination with a DTC P0130 indicating an open circuit of a front bank 1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical conti
6367	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the malfunction indicator light illumination with a DTC P0130 indicating an open circuit of a front bank 1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical conti
6368	Poor sealing fuel caps (part number 16116756772) may cause illumination of the Malfunction Indicator Lamp (MIL). Approximately 55% of the returned caps tested okay and it is assumed the operator did not turn the cap tight enough. Evaporative Emissions may be exceeded if the cap has not sealed properly. There i
6369	On some trucks equipped with 5.7L engines the rear exhaust manifold bolts may break due to thermal stresses. Remedy: Chrysler has upgraded to stainless steel bolts in production. Dealers have been instructed to replace damaged bolts with the upgraded stainless steel bolts.
6370	On some trucks equipped with 5.7L engines the rear exhaust manifold bolts may break due to thermal stresses. Remedy: Chrysler has upgraded to stainless steel bolts in production. Dealers have been instructed to replace damaged bolts with the upgraded stainless steel bolts.
6371	On some vehicles equipped with a 3.3L or 3.8L engine the OBD for Downstream Oxygen Sensor Slow Response diagnostic is oversensitive and may illuminate the MIL and set trouble code P013A when no problem exists. Remedy: Chrysler has updated the production software and issued TSB 18-035-09 to reprogram th
6372	On some vehicles equipped with a 3.3L or 3.8L engine the OBD for Downstream Oxygen Sensor Slow Response diagnostic is oversensitive and may illuminate the MIL and set trouble code P013A when no problem exists. Remedy: Chrysler has updated the production software and issued TSB 18-035-09 to reprogram th
6373	On some vehicles the crankshaft timing features incorporated in the engine's flex plate may exceed tolerances in the Dynamic Crank Fuel Control (DCFC) routine. On such vehicles the DCFC routine mistakenly concludes there is combustion instability and responds by adding fuel immediately after a cold start. Becaus
6374	On some vehicles the crankshaft timing features incorporated in the engine's flex plate may exceed tolerances in the Dynamic Crank Fuel Control (DCFC) routine. On such vehicles the DCFC routine mistakenly concludes there is combustion instability and responds by adding fuel immediately after a cold start. Becaus
6375	Some minivans may illuminate the MIL for P2181 (Cooling System Performance) when no problem exists. This can occur if the engine is turned on and has reached normal operating condition, then is turned off, and then key is turned back to the "on" position for a period of time sufficient for the coolant temperature t
6376	Some minivans may illuminate the MIL for P2181 (Cooling System Performance) when no problem exists. This can occur if the engine is turned on and has reached normal operating condition, then is turned off, and then key is turned back to the "on" position for a period of time sufficient for the coolant temperature t

6398	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6399	Oxygen Sensors (O2 sensor) used during productions months June, July, and part of August, 2007 had been damaged by moisture contamination. The damaged stock, part number C2S38497, has been cleared from use and vehicles are being repaired with more recent stock. Owners are alerted of the O2 sensor failure
6400	Certain vehicles were built with a fuel storage venting system that is too restrictive to allow the evaporative emissions OBD to reliably defect small leaks in the fuel cap and fill pipe area. The evaporative emissions system diagnostic will detect large leaks such as those created when the fuel cap has been left off. Reme
6401	Certain vehicles were built with a fuel storage venting system that is too restrictive to allow the evaporative emissions OBD to reliably defect small leaks in the fuel cap and fill pipe area. The evaporative emissions system diagnostic will detect large leaks such as those created when the fuel cap has been left off. Reme
6402	An incorrect emission test group is referenced on the VECI labels for certain vehicles equipped with 2.8L turbo engines. The correct test group should have been AGMXJ02.8161 instead of AGMXT02.8161, which was used until January 27, 2010. Remedy: There will be a Voluntary Emission Recall conducted on the affecte
6403	AN OBD DTC for misfire (P0300-P0304) is setting on some vehicles. The root cause is believed to be due to the unique operating characteristics of an HEV with a higher frequency of engine starts and stops which may result in carbon deposits on the exhaust valves and/or exhaust ports. An investigation is continuing.
6404	AN OBD DTC for misfire (P0300-P0304) is setting on some vehicles. The root cause is believed to be due to the unique operating characteristics of an HEV with a higher frequency of engine starts and stops which may result in carbon deposits on the exhaust valves and/or exhaust ports. An investigation is continuing.
6405	AN OBD DTC for misfire (P0300-P0304) is setting on some vehicles. The root cause is believed to be due to the unique operating characteristics of an HEV with a higher frequency of engine starts and stops which may result in carbon deposits on the exhaust valves and/or exhaust ports. An investigation is continuing.
6406	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6407	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6408	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6409	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6410	A small number of vehicles have experienced a hesitation, stumble or engine stop at idle. Remedy: Affected vehicles will likely be brought in to the dealership for service due to the drivability issue. The ECM will be reprogrammed pursuant to a TSB which has been developed.
6411	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6412	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6413	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6414	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6415	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6416	The P1421 DTC for Intake Air Low Pressure Switch Circuit High Voltage is being set on some vehicles. This DTC is caused by a programming irregularity in the ECM. Remedy: Under investigation. 7/22/10: Owners will return vehicles for service due to MIL illumination. The ECM will be reprogrammed under warranty pu
6417	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to Engine Coolant Temperature Sensor (ECT) replacement. Diagnostic Trouble Codes (DTC) P0118, P1290 and P2181 are associated with the failed part 06A 919 501 which is being replaced with part number 06A 919 501 A. Failures have been
6418	Under certain engine starting conditions the OBD system may falsely detect a malfunction of the misfire. The cause of the failure is inappropriate calibration of the PCM. Remedy: A PCM with an improved calibration is made available for repair under Field Fix #4L. When this defect occurs the MIL illuminates the vehicl
6419	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0030, P0130, P3266 and P3255 relate to front oxygen sensor concerns. Part numbers 06F 906 262 AC and 06E 906 265 C are involved, the failure is related to improper crimping of the wires to the inside the sensor. The vendor for this
6420	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
6421	Broken needle valves inside the high pressure fuel pump (06H 127 025 K) may create a low fuel pressure condition. This condition will illuminate the Malfunction Indicator Lamp (MIL) and log Diagnostic Trouble Code (DTC) P0087 in the vehicles Engine Control Module (ECM). The manufacturer does not intend on perfor
6422	Broken needle valves inside the high pressure fuel pump (06H 127 025 K) may create a low fuel pressure condition. This condition will illuminate the Malfunction Indicator Lamp (MIL) and log Diagnostic Trouble Code (DTC) P0087 in the vehicles Engine Control Module (ECM). The manufacturer does not intend on perfor
6423	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6424	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6425	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6426	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6427	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6428	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6429	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6430	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6431	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6432	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6433	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6434	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6435	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6436	Some vehicles may experience a MIL illumination and operation in a reduced power "limp home" mode. In a new engine (i.e. before it is "broken in") and in a cold condition, the engine will not be capable of producing the appropriate engine torque for certain driving conditions. This is improperly diagnosed as an eng
6437	As a result of a condition in the manufacturing process of the ECM vehicles equipped with an automatic transaxle may exhibit harshness in shifting operations during acceleration. REMEDY: TSB TC002-06 has been issued to replace the Engine Control Module (ECM) of affected in-use vehicles. All owners will be notified
6438	As a result of a condition in the manufacturing process of the ECM vehicles equipped with an automatic transaxle may exhibit harshness in shifting operations during acceleration. REMEDY: TSB TC002-06 has been issued to replace the Engine Control Module (ECM) of affected in-use vehicles. All owners will be notified
6439	As a result of a condition in the manufacturing process of the ECM vehicles equipped with an automatic transaxle may exhibit harshness in shifting operations during acceleration. REMEDY: TSB TC002-06 has been issued to replace the Engine Control Module (ECM) of affected in-use vehicles. All owners will be notified
6440	Rough or uneven engine running together with Malfunction Indicator Lamp (MIL) illumination has lead technicians to replace the Mass Air Flow Sensor (PHF000140). The manufacturer believes that the majority of sensors had been replaced due to misdiagnosis. The number of sensors being replaced was greatly reduced
6441	Rough or uneven engine running together with Malfunction Indicator Lamp (MIL) illumination has lead technicians to replace the Mass Air Flow Sensor (PHF000140). The manufacturer believes that the majority of sensors had been replaced due to misdiagnosis. The number of sensors being replaced was greatly reduced
6442	Numerous Diagnostic Trouble Codes (DTC) and illumination of the Malfunction Indicator Lamp (MIL) have lead to the replacement of the rear Oxygen Sensor (O2). It was discovered that this defect was a software issue of the Engine Control Unit programming. For the short term a more robust diagnostic software was im
6443	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6444	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
6445	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
6446	The throttle housing (part # 986 605 115 01) is not working to its specifications. The Engine Control Unit (ECU) detects this and in case of serious problems can activate limp mode. Limp home mode allows the vehicle to be driven at limited speeds so the owner may get the vehicle to the dealership for repairs. An impr
6447	On some 3.7L, 3.8L or 4.0L vehicles the Electrically Erasable Programmable Read-Only Memory (EEPROM) memory write is over sensitive and may illuminate the MIL for DTC P16990 (EEPROM memory write denied/invalid) when no problem exists. REMEDY: Chrysler has updated the production software and issued a TSB
6448	On some 3.7L, 3.8L or 4.0L vehicles the Electrically Erasable Programmable Read-Only Memory (EEPROM) memory write is over sensitive and may illuminate the MIL for DTC P16990 (EEPROM memory write denied/invalid) when no problem exists. REMEDY: Chrysler has updated the production software and issued a TSB
6449	On some 3.7L, 3.8L or 4.0L vehicles the Electrically Erasable Programmable Read-Only Memory (EEPROM) memory write is over sensitive and may illuminate the MIL for DTC P16990 (EEPROM memory write denied/invalid) when no problem exists. REMEDY: Chrysler has updated the production software and issued a TSB
6450	Customer complaints of rough running concerns have been traced to numerous problems with the Ignition Coil (Part No. 948 602 104 00). If the ignition coil is not working properly the On-Board Diagnostic (OBD) misfire detection will illuminate the Malfunction Indicator Lamp (MIL). Emissions and drivability will both be
6451	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6452	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6453	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6454	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6455	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6456	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6457	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6458	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6459	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6460	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6461	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6462	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6463	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6464	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6465	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6466	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6467	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6468	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6469	Customers have been experiencing vehicle hesitation issues and / or Malfunction Indicator Lamp (MIL) on. The source of the problem appears to be the high pressure fuel pump, part number 948 110 315 02. It has been determined that the following types of problems are root causes. 1) The steel bellow within the pu
6470	Customers have been experiencing vehicle hesitation issues and / or Malfunction Indicator Lamp (MIL) on. The source of the problem appears to be the high pressure fuel pump, part number 948 110 315 02. It has been determined that the following types of problems are root causes. 1) The steel bellow within the pu
6471	Fuel tanks are being replaced for complaints of hard refueling, in some cases the anti-spit-back valve was not welded correctly. Fuel tank part numbers 955 201 075 10, 955 201 075 11, 955 201 075 12, 955 201 075 13, and 955 201 075 15 are involved. No drivability or emissions related concerns were provided. A pro
6472	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
6473	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
6474	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
6475	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6476	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6477	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6478	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6479	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
6480	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
6481	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
6482	Fuel tank vent valves are being replaced in conjunction with Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0456 and P0442 are stored in the Engine Control Units memory which lead the technician to the vent valve. Part number 955 605 241 00. There is no impact on drivability or emis
6483	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
6484	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6485	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or

6531	There are numerous defect reports and recalls associated with ignition coil failures that are covered by this recall. This recall overlaps some of the previous recalls.
6532	MIL is illuminated. Diagnostic trouble codes (DTC) related to this concern are P050B-85 or P0131 and P0151. Report dated 3/31/2010 adds two engine families and the statement that a large number of the sensors are being replaced due to misdiagnosis. Also states that emissions will increase when defect is present.
6533	MIL is illuminated. Diagnostic trouble codes (DTC) related to this concern are P050B-85 or P0131 and P0151. Report dated 3/31/2010 adds two engine families and the statement that a large number of the sensors are being replaced due to misdiagnosis. Also states that emissions will increase when defect is present.
6534	(50) 2007-2009 vehicles may exhibit this concern because they were re-calibrated to the 2010 calibration during a service visit.

	O
6535	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6536	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6537	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6538	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6539	The induction air temperature sensor may accumulate condensation internally which can sporadically increase the resistance of the sensor. These resistance increases will send false outputs to the Engine Control Unit (ECU) which will illuminate the Malfunction Indicator Lamp (MIL). There is no impact on emissions or driv
6540	The induction air temperature sensor may accumulate condensation internally which can sporadically increase the resistance of the sensor. These resistance increases will send false outputs to the Engine Control Unit (ECU) which will illuminate the Malfunction Indicator Lamp (MIL). There is no impact on emissions or driv
6541	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6542	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6543	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6544	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6545	The dampener-fuel line assembly may have a small perforation in the diaphragm of the pulse dampener due to out of specification parts. This may result in a noise noticeable to the customer. In addition to the noise a small amount of fuel may weep from manufacturing holes in the diaphragm housing. Remedy: Cl
6546	The dampener-fuel line assembly may have a small perforation in the diaphragm of the pulse dampener due to out of specification parts. This may result in a noise noticeable to the customer. In addition to the noise a small amount of fuel may weep from manufacturing holes in the diaphragm housing. Remedy: Cl
6547	A DTC code (P0461, P0462, or P0463) for the Fuel Level Sensor Circuit is being set on some vehicles. After further investigation it has been found that the contact fingers might prematurely wear or become damaged not providing adequate contact with the resistance card. Remedy: Affected vehicles will likely be broug
6548	A DTC code (P0461, P0462, or P0463) for the Fuel Level Sensor Circuit is being set on some vehicles. After further investigation it has been found that the contact fingers might prematurely wear or become damaged not providing adequate contact with the resistance card. Remedy: Affected vehicles will likely be broug
6549	Thermostat failure is being attributed to certain frequencies caused by constant speed driving. Coolant can seep into the wax element resulting in mechanical damage, seal failure. Technicians are lead to the thermostat based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes (DTC)
6550	Pressure hoses 11367838669 and 11367838670 used in the Variable Cam Timing system may crack because the Teflon used for production becomes brittle with age. There was a limited production period involving this concern, 09/05 to 12/05, the composition of the hose was changed at the beginning of Calendar Yea
6551	Fault code P2262 may be triggered in some vehicles because of failure of the turbocharger variable geometry (VG) mechanism to open or close as commanded by the Engine Control Module (ECM). Investigation shows that excessive soot build up inside turbocharger is most likely the cause of such open or close failures
6552	Fault code P2262 may be triggered in some vehicles because of failure of the turbocharger variable geometry (VG) mechanism to open or close as commanded by the Engine Control Module (ECM). Investigation shows that excessive soot build up inside turbocharger is most likely the cause of such open or close failures
6553	The soot filter on some 2007 Ram 2500/3500 vehicles may fail due to internal cracks from very high regeneration temperatures which result from continued soot loading without adequate regeneration. The design of the engine control module (ECM) calibration prevents the level of temperatures that initiate filter crackin
6554	The soot filter on some 2007 Ram 2500/3500 vehicles may fail due to internal cracks from very high regeneration temperatures which result from continued soot loading without adequate regeneration. The design of the engine control module (ECM) calibration prevents the level of temperatures that initiate filter crackin
6555	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
6556	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
6557	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
6558	Under certain driving conditions inappropriate ignition control causes catalyst heat damage. The catalyst oxygen storage capacity is reduced and the MIL illuminates. The cause of the failure is inappropriate calibration of the PCM. Remedy: A PCM with an improved calibration is made available for repair under Field Fi
6559	Under certain driving conditions inappropriate ignition control causes catalyst heat damage. The catalyst oxygen storage capacity is reduced and the MIL illuminates. The cause of the failure is inappropriate calibration of the PCM. Remedy: A PCM with an improved calibration is made available for repair under Field Fi
6560	On some Hybrid Electric Vehicles equipped with 5.7L engines, the OBD system may illuminate the MIL when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the PCM, Hybrid Control Processor (HCP), TEHCM, and Accessory Power Module (APM) with new software on af
6561	Some mini vans have been built with a manufacturing aid (clip) that can side load the wiring harness connector at the Accelerator Pedal Position Sensor and illuminate the Electronic Throttle Control (ETC) lamp for P2122 (APP Sensor 1 circuit low) or P2127 (APP Sensor 2 circuit low). This condition can only occur if the veh
6562	Some mini vans have been built with a manufacturing aid (clip) that can side load the wiring harness connector at the Accelerator Pedal Position Sensor and illuminate the Electronic Throttle Control (ETC) lamp for P2122 (APP Sensor 1 circuit low) or P2127 (APP Sensor 2 circuit low). This condition can only occur if the veh
6563	Some mini vans may have been built with incorrect terminals in the engine wiring harness and illuminate the MIL for P0300-01, P0303, P0340, P0344, P2302, or P2308. Wiring harnesses built between March 20 and April 17, 2009 may have the incorrect terminals at one or more of the following locations: ignition coil #
6564	Some mini vans may have been built with incorrect terminals in the engine wiring harness and illuminate the MIL for P0300-01, P0303, P0340, P0344, P2302, or P2308. Wiring harnesses built between March 20 and April 17, 2009 may have the incorrect terminals at one or more of the following locations: ignition coil #
6565	Some mini vans may have been built with incorrect terminals in the engine wiring harness and illuminate the MIL for P0300-01, P0303, P0340, P0344, P2302, or P2308. Wiring harnesses built between March 20 and April 17, 2009 may have the incorrect terminals at one or more of the following locations: ignition coil #
6566	Some mini vans may have been built with incorrect terminals in the engine wiring harness and illuminate the MIL for P0300-01, P0303, P0340, P0344, P2302, or P2308. Wiring harnesses built between March 20 and April 17, 2009 may have the incorrect terminals at one or more of the following locations: ignition coil #
6567	Some trucks may experience throttle blade icing in extremely cold weather and illuminate the Electronic Throttle Control (ETC) lamp for P2110 or P2118.Remedy: Chrysler has issued TSB 04-003-10 instructing dealerships to reflash the PCM on affected vehicles. This new software adds logic that cycles the throttle blade
6568	Some trucks may experience throttle blade icing in extremely cold weather and illuminate the Electronic Throttle Control (ETC) lamp for P2110 or P2118.Remedy: Chrysler has issued TSB 04-003-10 instructing dealerships to reflash the PCM on affected vehicles. This new software adds logic that cycles the throttle blade
6569	Some trucks may experience throttle blade icing in extremely cold weather and illuminate the Electronic Throttle Control (ETC) lamp for P2110 or P2118.Remedy: Chrysler has issued TSB 04-003-10 instructing dealerships to reflash the PCM on affected vehicles. This new software adds logic that cycles the throttle blade
6570	Some trucks may experience throttle blade icing in extremely cold weather and illuminate the Electronic Throttle Control (ETC) lamp for P2110 or P2118.Remedy: Chrysler has issued TSB 04-003-10 instructing dealerships to reflash the PCM on affected vehicles. This new software adds logic that cycles the throttle blade
6571	Some trucks may experience throttle blade icing in extremely cold weather and illuminate the Electronic Throttle Control (ETC) lamp for P2110 or P2118.Remedy: Chrysler has issued TSB 04-003-10 instructing dealerships to reflash the PCM on affected vehicles. This new software adds logic that cycles the throttle blade
6572	Some vehicles equipped with 3.7L engines may have a thermostat in which the rubber stem seat was not properly cured. This could allow coolant to prematurely pass through the thermostat causing it to open early and illuminate the MIL setting trouble codes P0128 or P2181. Remedy: Chrysler has identified the batch
6573	Some vehicles equipped with 3.7L engines may have a thermostat in which the rubber stem seat was not properly cured. This could allow coolant to prematurely pass through the thermostat causing it to open early and illuminate the MIL setting trouble codes P0128 or P2181. Remedy: Chrysler has identified the batch
6574	Some vehicles with automatic transmissions may experience a harsh downshift at 4th - 3rd gear. Some consumers may notice this downshift and mention this as a point of displeasure in Initial Quality Survey (IQS) results. 	O
6733	Owner concerns of Malfunction Indicator Lamp (MIL) illumination are related to coolant temperature sensors, part number 997 606 420 00. There also is a potential for cold start issues with a failed part. A production change was made in 2/5/2009. Update 1 adds 1 Engine Family and updates sales volumes.Update 2 A
6734	It is believed fuel pressure sensors are being replaced as part of the diagnostic process before the high pressure fuel pump is replaced. Update 1 adds 2009 3.4BDI and 2010 4.8SEd Engine Families.Update 2 adds 2009 3.8CDI and 2010 4.8PSD Engine Families.Update 3 adds 2011 Engine Families 3.4BDI, 4.8CSD and
6735	It is believed fuel pressure sensors are being replaced as part of the diagnostic process before the high pressure fuel pump is replaced. Update 1 adds 2009 3.4BDI and 2010 4.8SEd Engine Families.Update 2 adds 2009 3.8CDI and 2010 4.8PSD Engine Families.Update 3 adds 2011 Engine Families 3.4BDI, 4.8CSD and
6736	Customer complaints of difficulty filling the fuel tank have lead to the replacement of fuel filler necks. Reported part numbers are 997 201 043 02 or 997 201 043 08. The is no impact on drivability or emissions and the concern is under investigation. Update 1 dated 6/7/2010 adds 2009 3.8CDI Engine Family and part
6737	Illumination of the Malfunction Indicator Lamp (MIL) drives owners to return to their vehicles to the dealership workshop for investigation. Numerous Oxygen sensor related trouble codes lead technicians to replace the pre-catalyst Oxygen sensor, part number 948 606 131 01. The manufacturer will continue to monitor t
6738	Illumination of the Malfunction Indicator Lamp (MIL) drives owners to return to their vehicles to the dealership workshop for investigation. Numerous Oxygen sensor related trouble codes lead technicians to replace the pre-catalyst Oxygen sensor, part number 948 606 131 01. The manufacturer will continue to monitor t
6739	Owner complaints of rough running at idle and Malfunction Indicator Lamp (MIL) illumination may be related to fuel pressure sensors. If trouble code P12A2 is retrieved technicians proceed to replace the fuel pressure sensor in the lower fuel rail. Part number 955 606 230 00 was provided in the report. It is believed som
6740	Owner complaints of rough running at idle and Malfunction Indicator Lamp (MIL) illumination may be related to fuel pressure sensors. If trouble code P12A2 is retrieved technicians proceed to replace the fuel pressure sensor in the lower fuel rail. Part number 955 606 230 00 was provided in the report. It is believed som
6741	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
6742	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
6743	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
6744	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
6745	the air inlet duct to the turbocharger may become loose or disconnected on vehicles built through April 28, 2010. The original design was sensitive to operator and installation process such that the duct may not be fully seated and properly aligned. Remedy: A new design for the air duct has been developed that will a
6746	The components that failed are either the left or right exhaust manifold. The exhaust manifold assemblies also includes a catalytic converter. The typical failure for a left/right assembly is due to thermal damage of the catalytic converter. The cause of the higher than expected exhaust temperatures has not been det
6747	The components that failed are either the left or right exhaust manifold. The exhaust manifold assemblies also includes a catalytic converter. The typical failure for a left/right assembly is due to thermal damage of the catalytic converter. The cause of the higher than expected exhaust temperatures has not been det
6748	The components that failed are either the left or right exhaust manifold. The exhaust manifold assemblies also includes a catalytic converter. The typical failure for a left/right assembly is due to thermal damage of the catalytic converter. The cause of the higher than expected exhaust temperatures has not been det
6749	The component that failed is the exhaust manifold. The exhaust manifold assembly for these vehicles also includes the catalytic converter. The typical failure is mat erosion of the catalytic converter. The probable cause of the mat erosion failures are due to a combination of the following: dimple location for error pro
6750	The component that failed is the exhaust manifold. The exhaust manifold assembly for these vehicles also includes the catalytic converter. The typical failure is mat erosion of the catalytic converter. The probable cause of the mat erosion failures are due to a combination of the following: dimple location for error pro
6751	The Air/Flow Sensor slow response DTCs (P0133/P0153) will eventually illuminate the MIL for early build 2011MY M56 vehicles due to a programming error. Remedy: Production has been changed as of May 15, 2010. A TSB has been issued to aid in diagnosis and to direct technicians to reprogram these vehicles. Niss
6752	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
6753	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
6754	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
6755	Data errors in the On-Board Diagnostic (OBDll) software allows certain faults to be recorded as P0000 instead of their correct trouble code. Example: incorrect oxygen sensor response time should record P0133/P0153 instead P0000 is recorded. It also occurs with P11B9/P11BA intake air temperature sensor and P10B4/P1
6756	Data errors in the On-Board Diagnostic (OBDll) software allows certain faults to be recorded as P0000 instead of their correct trouble code. Example: incorrect oxygen sensor response time should record P0133/P0153 instead P0000 is recorded. It also occurs with P11B9/P11BA intake air temperature sensor and P10B4/P1
6757	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission from 3/08-8/08. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discove
6758	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discovered by the man
6759	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discovered by the man
6760	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission from 3/10-8/10. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discove
6761	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discovered by the man
6762	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discovered by the man
6763	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission from 3/10-8/10. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discove
6764	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission from 3/10-8/10. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discove
6765	A data error in the transmission control software will allow erasure of any trouble codes when the control unit is shutdown. This defect impacts only vehicles built with the DKG transmission from 3/10-8/10. Improved software is in the planning stages and will be sent to dealers as soon as available. This defect was discove
6766	A small Evaporative Emissions leak may be caused by the Leak Diagnostic Pump, part number 16137193479. Malfunction Indicator Lamp (MIL) illumination alerts owners of the concern. Tests performed on returned pumps show 55% of the pumps had an electrical problem (shorted to ground). The 45% that tested oka
6767	Data errors in the On-Board Diagnostic (OBDll) software allows certain faults to be recorded as P0000 instead of the correct trouble code. A malfunction in the vehicle speed sensor rationality check should store code P0503 instead P0000 appears. The Malfunction Indicator Lamp will illuminate when a malfunction is prese
6768	Data errors in the On-Board Diagnostic (OBDll) software allows certain faults to be recorded as P0000 instead of the correct trouble code. A malfunction in the vehicle speed sensor rationality check should store code P0503 instead P0000 appears. The Malfunction Indicator Lamp will illuminate when a malfunction is prese
6769	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to Engine Coolant Temperature Sensor (ECT) replacement. Diagnostic Trouble Codes (DTC) P0118, P1290 and P2181 are associated with the failed part 06A 919 501 which is being replaced with part number 06A 919 501 A. Failures have been
6770	Some vehicles may experience a MIL accompanied by DTC P0456 indicating Evaporative Emission System-Very Small Leak Detected when no actual leak exists. This false MIL is due to a diagnostic threshold that is too severe. Remedy: Hyundai will publish a TSB to provide repair info to dealers and will reprogram the
6771	Some vehicles may experience a MIL illumination as a result of thermostat monitoring error. The main cause is insufficient opening temperature of thermostat due to inner part defect (bent). Remedy: Kia will publish a TSB to provide repair information to Kia dealers for this condition and will replace the thermostat.
6772	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6773	Exhibits various DTCs:P0751 and auto trans limited to 3rd gear for fail-safe operation after MIL illumination. P0172, P0175 which results in system too rich. P02196, P02198 which results in O2 sensor stuck rich. P0128, P0037, P0057 for O2 sensor heater control circuit low. Remedy: Corrections have been made at t
6774	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6775	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6776	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6777	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6778	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6779	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6780	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6781	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6782	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6783	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6784	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6785	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6786	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6787	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6788	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6789	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6790	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6791	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6792	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6793	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6794	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6795	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6796	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6797	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6798	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6799	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6800	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6801	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6802	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6803	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6804	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6805	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6806	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6807	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6808	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6809	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6810	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6811	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6812	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6813	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6814	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6815	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6816	Some vehicles equipped with 5.7L engines may experience MIL illumination for EGR performance due to corrosion internal to the EGR valve's integral solenoid. This corrosion is caused by exhaust gas migration along vent hole in the isolator shield. Remedy: The EGR valve was modified for MY2008 to remove the ven
6817	There are reports of a malfunction in the Intake Manifold Runner (possible binding of the flap), part number 06J 133 201 G. This malfunction will illuminate the Malfunction Indicator Lamp and store Diagnostic Trouble Code (DTC) P2015. There is no effect on emissions and test data was provided. Modified dimensional
6818	There are reports of a malfunction in the Intake Manifold Runner (possible binding of the flap), part number 06J 133 201 G. This malfunction will illuminate the Malfunction Indicator Lamp and store Diagnostic Trouble Code (DTC) P2015. There is no effect on emissions and test data was provided. Modified dimensional
6819	Malfunction Indicator Lamp (MIL) on with Diagnostic Trouble Code (DTC) P0706 (transmission range sensor circuit performance) is related to the Transmission Control Module (TCM). This concern only involves the Continuously Variable Transmission (CVT). Other symptoms associated with this failure are shifter display f
6820	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6821	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6822	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6823	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6824	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6825	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6826	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6827	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6828	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6829	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6830	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6831	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv
6832	Some vehicles may experience catalyst front substrate cracking or melting. Some of these conditions may be attributed to the combination of higher canning pressures in manufacturing of the catalyst assembly, with a substrate produced at the lower end of the strength specification and exposure to some extreme driv

6931	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6932	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6933	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6934	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6935	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6936	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6937	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6938	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6939	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6940	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6941	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6942	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6943	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Re
6944	Failure of the Selective Catalyst Reduction (SCR) system pump illuminates the Malfunction Indicator Lamp (MIL). Diagnostic Trouble Codes P20E8 and 20E9 will be logged in the memory of the Engine Control Module (ECM) also. A software charge will also be required to repair the vehicles involved. Emissions will increase
6945	Numerous failures of the thermostat (inc. housing) ,part number 11537534521, lead to owner complaints of Malfunction Indicator lamp (MIL) illumination. Failures include leakage, temperature sensor failure and/or electrical contact corrosion. There is no impact on emissions or drivability with this concern.
6946	Numerous failures of the thermostat (inc. housing) ,part number 11537534521, lead to owner complaints of Malfunction Indicator lamp (MIL) illumination. Failures include leakage, temperature sensor failure and/or electrical contact corrosion. There is no impact on emissions or drivability with this concern.
6947	The P1421 DTC for intake air low pressure switch circuit high voltage is being set on some Versa 1.8L vehicles. This DTC is being set by a programming irregularity in the ECM. Remedy: A TSB is being created and will be distributed for this issue that instructs dealers to reprogram the ECM.
6948	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
6949	Some 2010MY vehicle equipped with 2.0L engines have experienced a malfunction indicator light illumination as a result of a thermostat monitoring error (P0128). The main cause is insufficient opening temperature of thermostat due to inner part defect (bent). REMEDY: Kia will publish a TSB to provide repair informa
6950	Some 2010MY vehicle equipped with 2.0L engines have experienced a malfunction indicator light illumination as a result of a thermostat monitoring error (P0128). The main cause is insufficient opening temperature of thermostat due to inner part defect (bent). REMEDY: Kia will publish a TSB to provide repair informa
6951	Poor sealant used on the Camshaft Position (CMP) actuator may allow engine oil to follow the wiring harness to the Engine Control Module (ECM). Part numbers A271 051 01 77 and A111 051 01 77. Once the oil reaches the ECM harness plug it will leach into the unit itself. If enough oil accumulates inside it can "short o

Per the applicable model year owner manual, "if the fuel cap is not tightened until it clicks or if the tether is caught under the cap the Check Engine warning light may come on. RE
6988	Some vehicles may experience breakage of the fuel cap tether. Other reported warranty repairs include cap stuck or improperly tightened. Per the applicable model year owner manual, "if the fuel cap is not tightened until it clicks or if the tether is caught under the cap the Check Engine warning light may come on. RE
6989	Very small particles can contaminate the Valve Timing Control (VTC) solenoid leading to a MIL illumination for the DTC P0011 code. It is believed that these are due to the initial manufacturing process with no issue of recurrence once remedied. REMEDY: For production starting in July 2009 active cleaning logic for the
6990	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns are related to the catalytic converters which are being replaced by part numbers 3C0 254 502 TX, 3C0 254 503 PX and 3C0 254 504 BX. Vehicles ex
6991	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns are related to the catalytic converters which are being replaced by part numbers 3C0 254 502 TX, 3C0 254 503 PX and 3C0 254 504 BX. Vehicles ex
6992	There are reports of a malfunction in the Intake Manifold Runner (possible binding of the flap), part number 06J 133 201 G. This malfunction will illuminate the Malfunction Indicator Lamp and store Diagnostic Trouble Code (DTC) P2015. There is no effect on emissions and test data was provided. Modified dimensional
6993	Malfunction Indicator Lamp Illumination (MIL) in association with stored Diagnostic Trouble Code P 0455 lead to the replacement of the purge valve assembly. It has been determined that the valve, part number 3W0 133 986 N, is stuck open by carbon particles from the charcoal canister. The particles escape because o
6994	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
6995	Exhaust pipes are being replaced in conjunction with oxygen sensor failure reported in Defect Report 2008-12. Malfunction Indicator Light (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0421 and P0431 lead to the replacement of the oxygen (O2) sensor. Replacement of the pipe may be required if
6996	High pressure fuel injectors are being replaced for two concerns, loose springs clips on the injector and for coking of the injector. Both concerns may cause rough running conditions an impact on emissions is not yet known. A production change was made 12/2009 to correct the spring clip concern, the coking concern is ur
6997	Spark plugs have been found to be defective because of loose platinum coating on the ground electrode caused by a flaw in the manufacturing process. Workshop Service Action W728 was issued April 2008 to replace all spark plugs, part number 999 170 122 90, in the vehicles involved. The impact on emissions is unk
6998	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
6999	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0456 and P0455. Part number 997 110 029 73. No other information was provided as the manufacturer will continue to monitor the concern.
7000	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0456 and P0455. Part number 997 110 029 73. No other information was provided as the manufacturer will continue to monitor the concern.
7001	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0456 and P0455. Part number 997 110 029 73. No other information was provided as the manufacturer will continue to monitor the concern.
7002	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0441 and P0455. Part number 9A1 110 091 02 these lines include a purge valve which has become stuck open causing the concern. There may be customer complaints of vehicle hesitation. The manufacturer will continue to monitor the concern
7003	Catalytic converters, part numbers 997 113 109 33 and 997 113 110 33, are being replaced based on Diagnostic Trouble Codes P0421 and P0431. However, the manufacturer believes, based on tests performed on returned parts, that a damaged Oxygen sensor is the real causal part. A technical Service Bulletin was iss
7004	On some trucks equipped with 5.7L engines the rear exhaust manifold bolts may break due to thermal stresses. Remedy: Chrysler has upgraded to stainless steel bolts in production. Dealers have been instructed to replace damaged bolts with the upgraded stainless steel bolts.
7005	In severely corrosive environments where road salts are frequently used in winter vehicles may be exposed to road debris (mud) mixed with road salt. This material can become trapped between a reinforcing bracket and the fuel filler pipe potentially causing corrosion. Over time corrosion could damage the fuel filler pi
7006	In severely corrosive environments where road salts are frequently used in winter vehicles may be exposed to road debris (mud) mixed with road salt. This material can become trapped between a reinforcing bracket and the fuel filler pipe potentially causing corrosion. Over time corrosion could damage the fuel filler pi
7007	As a result of a poor seal between the fuel filler pipe and the fuel cap the key-off monitor will detect an evaporation emission fuel vapor leak that will activate the MIL 'ON' condition and store the DTC P1423 in the ECM. Remedy: A TSB has been issued that instructs that the fuel filler pipe and fuel cap of affected in-us
7008	As a result of a poor seal between the fuel filler pipe and the fuel cap the key-off monitor will detect an evaporation emission fuel vapor leak that will activate the MIL 'ON' condition and store the DTC P1423 in the ECM. Remedy: A TSB has been issued that instructs that the fuel filler pipe and fuel cap of affected in-us
7009	As a result of a poor seal between the fuel filler pipe and the fuel cap the key-off monitor will detect an evaporation emission fuel vapor leak that will activate the MIL 'ON' condition and store the DTC P1423 in the ECM. Remedy: A TSB has been issued that instructs that the fuel filler pipe and fuel cap of affected in-us
7010	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Hyundai will publish a TSB to provide reprogramming information to Kia dealers for this condition.
7011	Some vehicles have experienced false MIL illumination accompanied by DTC P0128, Coolant Temp Below Thermostat Regulating Temperature. In certain driving conditions these fault codes may be set when no component or emission malfunction exists, therefore the false MIL. Remedy: To prevent these erroneous f
7012	Kia has received owner complaints of vibration or rough idle at idle when the gear selector is put in (D)rive. Kia has inspected these vehicles but could find find any problem. Remedy: Although vehicles are normal Kia will release an ECU data update with idle RPM changed from 550 to 650RPM.
7013	Kia has received owner complaints of vibration or rough idle at idle when the gear selector is put in (D)rive. Kia has inspected these vehicles but could find find any problem. Remedy: Although vehicles are normal Kia will release an ECU data update with idle RPM changed from 550 to 650RPM.
7014	Kia has received owner complaints of vibration or rough idle at idle when the gear selector is put in (D)rive. Kia has inspected these vehicles but could find find any problem. Remedy: Although vehicles are normal Kia will release an ECU data update with idle RPM changed from 550 to 650RPM.
7015	Kia has received owner complaints of vibration or rough idle at idle when the gear selector is put in (D)rive. Kia has inspected these vehicles but could find find any problem. Remedy: Although vehicles are normal Kia will release an ECU data update with idle RPM changed from 550 to 650RPM.
7016	Kia has received owner complaints of vibration or rough idle at idle when the gear selector is put in (D)rive. Kia has inspected these vehicles but could find find any problem. Remedy: Although vehicles are normal Kia will release an ECU data update with idle RPM changed from 550 to 650RPM.
7017	A broken or faulty ground (pin B42 ground engine sensors) in the engine wiring harness can result in numerous (12 listed) system failures. Splice points VS1 and VS1_1 are the points of concern. Numerous fault codes are detected and the Malfunction Indicator Lamp (MIL) illuminates. These faults can happen at differe
7018	A broken or faulty ground (pin B42 ground engine sensors) in the engine wiring harness can result in numerous (12 listed) system failures. Splice points VS1 and VS1_1 are the points of concern. Numerous fault codes are detected and the Malfunction Indicator Lamp (MIL) illuminates. These faults can happen at differe
7019	Owner complaints of rattling noises from under the vehicle may be due to a leaking inlet flex pipe to the Catalytic Converter part numbers 4B0 254 500 LX and 4B0 254 550 LX. Also associated with this noise will be the illumination of the Malfunction Indicator Lamp (MIL) with Diagnostic Trouble Codes (DTC) P0421 and
7020	Owner complaints of rattling noises from under the vehicle may be due to a leaking inlet flex pipe to the Catalytic Converter part numbers 4B0 254 500 LX and 4B0 254 550 LX. Also associated with this noise will be the illumination of the Malfunction Indicator Lamp (MIL) with Diagnostic Trouble Codes (DTC) P0421 and
7021	On certain Mazda3 vehicles with manual transmission, if the clutch is not disengaged fully in spite of stops for such as a traffic light, the PCM works to increase the intake air for load adjustment. Subsequently, when the driver depresses the clutch pedal fully, the clutch is disengaged and the idle speed increases. The P

Subsequently, when the driver depresses the clutch pedal fully, the clutch is disengaged and the idle speed increases. The P
7025	On the front oxygen sensor, carbon may adhere on sensor element surface and lower insulation among its electrodes. This causes a change of voltage distribution inside of element leading to loss of oxygen ion from the element and stiffness deterioration. When dew information and vaporization occur on the sensor
7026	On the front oxygen sensor, carbon may adhere on sensor element surface and lower insulation among its electrodes. This causes a change of voltage distribution inside of element leading to loss of oxygen ion from the element and stiffness deterioration. When dew information and vaporization occur on the sensor
7027	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7028	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7029	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7030	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7031	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7032	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7033	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7034	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7035	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
7036	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
7037	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
7038	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to the Secondary Air Flow Pressure Sensor. If Diagnostic Trouble Code (DTC) P2431 is retrieved from the Engine Control Module the sensor is replaced. No drivability or emissions concerns are associated with the failure. A new parts is ava
7039	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to the Secondary Air Flow Pressure Sensor. If Diagnostic Trouble Code (DTC) P2431 is retrieved from the Engine Control Module the sensor is replaced. No drivability or emissions concerns are associated with the failure. A new parts is ava
7040	Improper calibration for intake air temperature, during cold starts, will cause Malfunction Indicator Lamp (MIL) illumination. This defect does not impact drivability or emissions. A new software calibration is planned to be implemented at the vehicles next service visit.
7041	Vehicles equipped with an automatic transaxle may experience a harsh shift condition and a MIL on with DTC P2716 (pressure control solenoid 'D' electrical) stored. this is caused by a manufacturing defect associated with the ECM.Remedy: Corrections have been made at the manufacturer of the ECU to correct the con
7042	Under certain conditions, the battery may experience high internal resistance and the OBD system may falsely detect deterioration of IMA battery. The cause of the failure is due to unnecessary coating in the IMA battery cell. Remedy: An improved IMA battery under #5B. Vehicle owners will be notified to bring their v
7043	A DTC code (P0461, P0462, or P0463) for the Fuel Level Sensor Circuit is being set on some vehicles. After further investigation it has been found that the contact fingers might prematurely wear or become damaged not providing adequate contact with the resistance card. Remedy: Affected vehicles will likely be broug

This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
7104	Customers have been experiencing vehicle hesitation issues and / or Malfunction Indicator Lamp (MIL) on. The source of the problem appears to be the high pressure fuel pump, part number 948 110 315 02. It has been determined that the following types of problems are root causes. 1) The steel bellow within the pu
7105	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
7106	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
7107	Fuel tanks are being replaced for complaints of hard refueling, in some cases the anti-spit-back valve was not welded correctly. Fuel tank part numbers 955 201 075 10, 955 201 075 11, 955 201 075 12, 955 201 075 13, and 955 201 075 15 are involved. No drivability or emissions related concerns were provided. A pro
7108	Poor crimping of the heater wire inside the Oxygen sensor causes Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 606 128 30 and 655 606 129 30 are involved in this report. An improved crimping process was introduced at the supplier in December 2007. Update 1 adds two part numbers, 955 606 136
7109	Engine hesitation and Malfunction Indicator Lamp (MIL) illumination may be associated to the mass air flow sensor. Part number 955 605 123 35. The manufacturer is currently monitoring the situation. Update 1 dated 11/9/2010 adds the 2009 and 2010 Engine Families. Also the report states the majority of returned p
7110	Engine hesitation and Malfunction Indicator Lamp (MIL) illumination may be associated to the mass air flow sensor. Part number 955 605 123 35. The manufacturer is currently monitoring the situation. Update 1 dated 11/9/2010 adds the 2009 and 2010 Engine Families. Also the report states the majority of returned p
7111	Malfunction Indicator Lamp (MIL) illumination, in turbo charged vehicles, is being attributed to debris or oil contamination in the air mass sensor, part number 997 606 125 00. The guided fault finder function in the On-Board Diagnosis (OBD) Tester has been improved to pinpoint which individual sensor is the root cause
7112	Malfunction Indicator Lamp (MIL) illumination, in turbo charged vehicles, is being attributed to debris or oil contamination in the air mass sensor, part number 997 606 125 00. The guided fault finder function in the On-Board Diagnosis (OBD) Tester has been improved to pinpoint which individual sensor is the root cause
7113	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change w
7114	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change w
7115	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change w
7116	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
7117	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
7118	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
7119	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
7120	Owner concerns of Malfunction Indicator Lamp (MIL) illumination or the engine cooling fan not running may be related to a defective temperature sensor. Engine over heating while driving at slow speeds on warm days may also be experienced. Part number 997 606 213 00. The replaced parts have not reached the requ
7121	Owner concerns of Malfunction Indicator Lamp (MIL) illumination or the engine cooling fan not running may be related to a defective temperature sensor. Engine over heating while driving at slow speeds on warm days may also be experienced. Part number 997 606 213 00. The replaced parts have not reached the requ
7122	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
7123	Pressure pipes for the Turbo Charging System are being replaced because they become loose. When the pipes loosen there is a loss in Turbo boost. The Malfunction Indicator Lamp (MIL) will illuminate and the vehicle will hesitate and loose power. The impact on emissions will be minimal because the hesitation and los
7124	Customer complaints of engine miss fire or running rough are related to spark plugs. It is believed the failures are a result of water intrusion caused by high pressure washing of the engine and engine compartment area. Water is channeled into the spark plug and coil causing corrosion at the mating surfaces. A Technic
7125	Customer complaints of hesitation, lack of power and Malfunction Indicator Lamp (MIL) illumination are being pinpointed to high pressure fuel pumps. Part numbers 9A1 110 315 01 or 9A1 110 315 02 have been reported. Low fuel pressure can cause a lean running condition which will increase vehicle emissions. A prod
7126	Customer complaints of hesitation, lack of power and Malfunction Indicator Lamp (MIL) illumination are being pinpointed to high pressure fuel pumps. Part numbers 9A1 110 315 01 or 9A1 110 315 02 have been reported. Low fuel pressure can cause a lean running condition which will increase vehicle emissions. A prod
7127	Customer complaints of difficulty filling the fuel tank have lead to the replacement of fuel filler necks. Reported part numbers are 997 201 043 02 or 997 201 043 08. The is no impact on drivability or emissions and the concern is under investigation. Update 1 dated 6/7/2010 adds 2009 3.8CDI Engine Family and part
7128	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Code (DTC) P2270. Part number involved in this possible defect is 997 606 138 02.

	O
7129	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
7130	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
7131	Carbon Canisters are being replaced based on Malfunction Indicator Lamp (MIL) illumination and numerous evaporative leak codes. Part number 958 201 221 20 was reported. There will be no impact on drivability but will have a potential for a small evaporative emissions leak.
7132	Carbon Canisters are being replaced based on Malfunction Indicator Lamp (MIL) illumination and numerous evaporative leak codes. Part number 958 201 221 20 was reported. There will be no impact on drivability but will have a potential for a small evaporative emissions leak.
7133	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 103 90 is involved. Porsche will continue to monitor this concern.
7134	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 103 90 is involved. Porsche will continue to monitor this concern.
7135	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 103 90 is involved. Porsche will continue to monitor this concern.
7136	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7137	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7138	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7139	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7140	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7141	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7142	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7143	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7144	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7145	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7146	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Part number involved in this possible defect is 9A1 606 177 01. Porsche is investigating this issue and only the 2009 Engine Family achieved the required number of failures.
7147	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Part number involved in this possible defect is 9A1 606 177 01. Porsche is investigating this issue and only the 2009 Engine Family achieved the required number of failures.
7148	Due to a manufacturing defect the exhaust temperature sensor may be susceptible to water ingress. Part numbers 9A1 606 250 04, 9A1 606 250 06 and 000 043 301 37 were reported. However the total number of failures was 3, which does not warrant submission of a defect report. A service bulletin was issued to instr
7149	On throttle position sensor (TPS) which consists of brush contact and resistive element, the brush contact may be worn out prematurely due to insufficient brush durability against a usage to drive in stop-and-go traffic frequently with repeated throttle operation. As a result abrasion dust of brush may adhere on resistive
7150	On throttle position sensor (TPS) which consists of brush contact and resistive element, the brush contact may be worn out prematurely due to insufficient brush durability against a usage to drive in stop-and-go traffic frequently with repeated throttle operation. As a result abrasion dust of brush may adhere on resistive
7151	On throttle position sensor (TPS) which consists of brush contact and resistive element, the brush contact may be worn out prematurely due to insufficient brush durability against a usage to drive in stop-and-go traffic frequently with repeated throttle operation. As a result abrasion dust of brush may adhere on resistive
7152	On throttle position sensor (TPS) which consists of brush contact and resistive element, the brush contact may be worn out prematurely due to insufficient brush durability against a usage to drive in stop-and-go traffic frequently with repeated throttle operation. As a result abrasion dust of brush may adhere on resistive
7153	On throttle position sensor (TPS) which consists of brush contact and resistive element, the brush contact may be worn out prematurely due to insufficient brush durability against a usage to drive in stop-and-go traffic frequently with repeated throttle operation. As a result abrasion dust of brush may adhere on resistive
7154	On throttle position sensor (TPS) which consists of brush contact and resistive element, the brush contact may be worn out prematurely due to insufficient brush durability against a usage to drive in stop-and-go traffic frequently with repeated throttle operation. As a result abrasion dust of brush may adhere on resistive
7155	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7156	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7157	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7158	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7159	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7160	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7161	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7162	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7163	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7164	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7165	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7166	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7167	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7168	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7169	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7170	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7171	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7172	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7173	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7174	The tightening specification of spark plug is inappropriate so that the spark plug may loosen and leads to misfire. The MIL illuminates. REMEDY: TBA
7175	Customer complaints of Malfunction Indicator Lamp (MIL) illumination in association with Diagnostic Trouble Codes (DTC) P0325 and P0327 lead technicians to replace the Knock Sensor. Part number 03H 905 377 A is shown to have signs of corrosion due to water egress. There is no impact on drivability or emissions ar
7176	Numerous failures of the thermostat (inc. housing) ,part number 11537534521, lead to owner complaints of Malfunction Indicator lamp (MIL) illumination. Failures include leakage, temperature sensor failure and/or electrical contact corrosion. There is no impact on emissions or drivability with this concern.
7177	Numerous failures of the thermostat (inc. housing) ,part number 11537534521, lead to owner complaints of Malfunction Indicator lamp (MIL) illumination. Failures include leakage, temperature sensor failure and/or electrical contact corrosion. There is no impact on emissions or drivability with this concern.
7178	On some trucks equipped with 5.7L engines the rear exhaust manifold bolts may break due to thermal stresses. Remedy: Chrysler has upgraded to stainless steel bolts in production. Dealers have been instructed to replace damaged bolts with the upgraded stainless steel bolts.
7179	Some vehicles are experiencing an error in tightening the fuel filler cap resulting in an evaporative emission leak DTC. An analysis of available field reports indicates that a very high percentage of these are due to the owner incorrectly installing the fuel cap either by pushing while turning the cap or by not tightening to
7180	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7181	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7182	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7183	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7184	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7185	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7186	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7187	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7188	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7189	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7190	The low fuel pressure sensor, part number 13537547883, is being replaced because of a defective o-ring which will allow fuel to seep into the sensor causing a short circuit. The shorted circuit causes Malfunction Indicator Lamp (MIL) illumination which alerts owner to seek repairs. There is no impact on emissions or driva
7191	Under certain driving conditions, inappropriate calibration of the PCM may cause low power. REMEDY: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix #5W. The PCM software will be updated under emission warranty according to
7192	Under certain driving conditions, inappropriate calibration of the PCM may cause low power. REMEDY: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix #5W. The PCM software will be updated under emission warranty according to
7193	Some vehicles may experience transmission drivability concerns due to high electrical resistance conditions in the transmission range sensor. High resistance conditions may be due to incorrect nickel plating on the stationary contacts in the sensor which is the result of poor process controls in the sensor supplier's manu
7194	Some vehicles may experience transmission drivability concerns due to high electrical resistance conditions in the transmission range sensor. High resistance conditions may be due to incorrect nickel plating on the stationary contacts in the sensor which is the result of poor process controls in the sensor supplier's manu
7195	Some vehicles may experience transmission drivability concerns due to high electrical resistance conditions in the transmission range sensor. High resistance conditions may be due to incorrect nickel plating on the stationary contacts in the sensor which is the result of poor process controls in the sensor supplier's manu

The OBD thermostat monitor uses calculated values to compare to the calibration threshold. Under this conditi
7245	The Air/Fuel Sensor slow response DTV P0133 may illuminate the MIL for early build 2011MY Juke vehicles due to a programming error. Remedy: This incident is under investigation. Running change XB3-G0434 was implemented in production on December 14, 2010. A port modification was implemented to reprogram
7246	Analysis of sample parts showed that the defective valves were blocked due to broken oil screens. Remedy: Production improvements were implemented at vendor as of the production period. Improved replacement parts are available for service.
7247	Some Motor Rotor Position Sensor may have been manufactured out of specification which may cause open-circuit. The MIL illuminates. Remedy: Part quality has been improved.
7248	Some Motor Rotor Position Sensor may have been manufactured out of specification which may cause open-circuit. The MIL illuminates. Remedy: Part quality has been improved.
7249	The component involved is the camshaft position actuator solenoid valve. A camshaft position actuator is attached to each camshaft and is hydraulically operated in order to change angle of the camshaft relative to crankshaft position. The solenoid valves have screen ring filters to protect from debris entering the inter
7250	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7251	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7252	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7253	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7254	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7255	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7256	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7257	Under extremely cold weather conditions the plastic intake manifold may contract sufficiently to cause interference with the actuator lever for the tumble/swirl control valve (TSCV) restricting the TSCV from returning fully to the open position. Remedy: The shutter valve actuator will be modified to provide more clearance
7258	One some electronic throttle bodies the internal gears may have been assembled with a misalignment due to production variation which may result in excessive wear of the gears. As a result during throttle initialization performed after key-off the increased internal friction from the excessively worn gears may prevent t
7259	The OBD fuel system monitor on these vehicles monitors the motor current of the leak detection pump (LDP) to determine if a leak exists. When the monitor initializes it measures the motor current needed to move air through a calibrated orifice and then uses this motor current as a reference for the monitor threshol
7260	The OBD fuel system monitor on these vehicles monitors the motor current of the leak detection pump (LDP) to determine if a leak exists. When the monitor initializes it measures the motor current needed to move air through a calibrated orifice and then uses this motor current as a reference for the monitor threshol

If loosening occurs, fuel could leak past a gasket used in the connection between the sensor and the pipe a
7377	Due to insufficient tightening of the fuel pressure sensor connected to certain engine fuel delivery pipes (those with nickel phosphorus plating) there is possibility that over time the pressure sensor could loosen. If loosening occurs, fuel could leak past a gasket used in the connection between the sensor and the pipe a
7378	Due to insufficient tightening of the fuel pressure sensor connected to certain engine fuel delivery pipes (those with nickel phosphorus plating) there is possibility that over time the pressure sensor could loosen. If loosening occurs, fuel could leak past a gasket used in the connection between the sensor and the pipe a
7379	Some vehicles equipped with 3.5L engines have experienced a MIL illumination with a DTC P0017 set, indicating a bank 1 exhaust tooth offset error even though a malfunction has not occurred. This is due to improper programming of the PCM threshold for a malfunction. Remedy: To correct this problem Kia has repr
7380	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7381	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7382	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7383	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7384	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7385	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7386	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7387	Failure of the evaporative emissions Diagnostic Module for Tank Leakage (DMTL) results in replacement. Dealership service technicians proceed based on Malfunction Indicator Lamp illumination. Part number WRT500200 was reported. With this failure there is no impact on emissions or drivability. Update dated 3/29/20
7388	Some rollover valves may have been incorrectly manufactured which may allow liquid fuel to enter the vent line upon roll over. Remedy: Part quality has been improved. Vehicle owners will be notified to bring their vehicle to the dealership for the replacement of the fuel tank unit (including roll over valve) according to
7389	Poor circuit continuity of the Air Temperature Sensor located in the Premair treated heat exchanger will illuminate the Malfunction Indicator Lamp (MIL). Failure of the sensor is a result of a poor solder of the wire to the sensor and is affected by the temperature change of the part. Part number A2115420918 was reporte
7390	Poor circuit continuity of the Air Temperature Sensor located in the Premair treated heat exchanger will illuminate the Malfunction Indicator Lamp (MIL). Failure of the sensor is a result of a poor solder of the wire to the sensor and is affected by the temperature change of the part. Part number A2115420918 was reporte
7391	The random misfire DTC P0300 may illuminate the MIL due to a supplier hardware issue with the negative battery cables leading to high resistance in the ground wires. Remedy: An Infiniti TSB is under development that will assist dealership technicians with the ground wire replacement repair procedure.
7392	The random misfire DTC P0300 may illuminate the MIL due to a supplier hardware issue with the negative battery cables leading to high resistance in the ground wires. Remedy: An Infiniti TSB is under development that will assist dealership technicians with the ground wire replacement repair procedure.
7393	The random misfire DTC P0300 may illuminate the MIL due to a supplier hardware issue with the negative battery cables leading to high resistance in the ground wires. Remedy: An Infiniti TSB is under development that will assist dealership technicians with the ground wire replacement repair procedure.
7394	The random misfire DTC P0300 may illuminate the MIL due to a supplier hardware issue with the negative battery cables leading to high resistance in the ground wires. Remedy: An Infiniti TSB is under development that will assist dealership technicians with the ground wire replacement repair procedure.
7395	The random misfire DTC P0300 may illuminate the MIL due to a supplier hardware issue with the negative battery cables leading to high resistance in the ground wires. Remedy: An Infiniti TSB is under development that will assist dealership technicians with the ground wire replacement repair procedure.
7396	Owner complaints describing lack of power and whining noises from engine compartment have been diagnosed to be the result of a cracked turbocharger compressor wheel. This defect will also illuminate the Malfunction Indicator Lamp (MIL) and set Diagnostic Trouble Codes (DTC) P0234, P0299 and P2564. Owners/driv
7397	In some instances a baffle on the inside of the engine valve cover will separate from the valve cover itself. When this defect occurs the Malfunction Indicator Lamp (MIL) will illuminate and Diagnostic Trouble Codes (DTC) P2279 and P2187 will be stored in the Engine Control Module (ECM). A loose baffle will allow the Po
7398	In some instances a baffle on the inside of the engine valve cover will separate from the valve cover itself. When this defect occurs the Malfunction Indicator Lamp (MIL) will illuminate and Diagnostic Trouble Codes (DTC) P2279 and P2187 will be stored in the Engine Control Module (ECM). A loose baffle will allow the Po
7399	Failure of the front oxygen sensor (part number 06J 906 262) may be caused by broken wires, sporadic signal or a defective heater device. This condition will illuminate the Malfunction Indicator Lamp (MIL) and store Diagnostic Trouble Codes (DTC) P0130. An analysis of returned parts show that one third of the parts te
7400	The emissions label (part number 059 010 533 G) contains incorrect weight category. A new label will be installed on the remaining production vehicles and vehicles sold to retail customers. There is no impact on emissions or drivability.
7401	The fuel fill pipe to fuel tank weld joint may crack slightly as a result of stress placed on the joint by the swelling of dissimilar materials. When this defect occurs EVAP emisisons are presumed to increase. Remedy: An improved fuel filler neck tube and an improved vapor return tube are available for repair under Field I
7402	The fuel fill pipe to fuel tank weld joint may crack slightly as a result of stress placed on the joint by the swelling of dissimilar materials. When this defect occurs EVAP emisisons are presumed to increase. Remedy: An improved fuel filler neck tube and an improved vapor return tube are available for repair under Field I
7403	A calibration ROM error may illuminate the MIL for a P0710 DTC when a malfunction does not exist for some vehicles equipped with a CVT transmission. Remedy: A TSB is being written to instruct technicians to reprogram the TCM.
7404	A calibration ROM error may illuminate the MIL for a P0710 DTC when a malfunction does not exist for some vehicles equipped with a CVT transmission. Remedy: A TSB is being written to instruct technicians to reprogram the TCM.
7405	A calibration ROM error may illuminate the MIL for a P0710 DTC when a malfunction does not exist for some vehicles equipped with a CVT transmission. Remedy: A TSB is being written to instruct technicians to reprogram the TCM.
7406	A calibration ROM error may illuminate the MIL for a P0710 DTC when a malfunction does not exist for some vehicles equipped with a CVT transmission. Remedy: A TSB is being written to instruct technicians to reprogram the TCM.
7407	A calibration ROM error may illuminate the MIL for a P0710 DTC when a malfunction does not exist for some vehicles equipped with a CVT transmission. Remedy: A TSB is being written to instruct technicians to reprogram the TCM.
7408	A calibration ROM error may illuminate the MIL for a P0710 DTC when a malfunction does not exist for some vehicles equipped with a CVT transmission. Remedy: A TSB is being written to instruct technicians to reprogram the TCM.
7409	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
7410	In severely corrosive environments where road salts are frequently used in winter vehicles may be exposed to road debris (mud) mixed with road salt. This material can become trapped between a reinforcing bracket and the fuel filler pipe potentially causing corrosion. Over time corrosion could damage the fuel filler pi

	O
1	**Resolution**
2	Volvo has determined that these vehicles may not fully meet the Environmental Protection Agency (EPA) and California Air Resources Board (CARB) exhaust emissions standards. This condition may cause the vehicle to fail a state inspection or Smog Check test. Remedy: Owners are asked to contact their dealer to sc
3	Remedy: Recall Q131 instructs Land Rover dealerships to reconfigure the Engine Control Module (ECM) and, where appropriate, the Transmission Control Module (TCM). This recall will correct a concern that has been identified with the emissions calibration where certain driving conditions may cause a gradual increase in

Part numbers 8E0 906 087 D/E/N/P are involved in the recall. Remedy: Volkswagen and Audi dealers were sent instructions on or about September 26, 2007 to inspect su
7	The left and right side catalyst assemblies, involving a total of four catalysts, will be replaced with the correct catalyst assemblies for this application. See Enclosure I (Ford Service Recall Bulletin).
8	The left and right side catalyst assemblies, involving a total of four catalysts, will be replaced with the correct catalyst assemblies for this application. See Enclosure I (Ford Service Recall Bulletin).
9	The existing Powertrain Control Modules (PCMs) will be replaced using PCMs having newly certified calibrations.
10	The existing Powertrain Control Modules (PCMs) will be replaced using PCMs having newly certified calibrations.
11	The potential defect involves fuel hoses and metal lines in the engine compartment that deliver fuel to and from the engine. It is possible that seepage could occur between a hose and the metal line on either side of the hose. If this seepage occurs, a conspicuous fuel odor will be present.
12	The potential defect involves fuel hoses and metal lines in the engine compartment that deliver fuel to and from the engine. It is possible that seepage could occur between a hose and the metal line on either side of the hose. If this seepage occurs, a conspicuous fuel odor will be present.
13	The potential defect involves fuel hoses and metal lines in the engine compartment that deliver fuel to and from the engine. It is possible that seepage could occur between a hose and the metal line on either side of the hose. If this seepage occurs, a conspicuous fuel odor will be present.
14	Certain cars exhibit an incorrect hose routing on the emission label.
15	Certain cars exhibit an incorrect hose routing on the emission label.
16	The emission label on these vehicles erroneously indicates compliance with "TLEV" emissions standards.
17	The protective internal coating of the electronic crank angle sensor was manufactured from material that did not meet specifications.
18	The monoliths in the underbody catalytic converter may rattle and break up during the vehicles' useful lives.
19	The monoliths in the underbody catalytic converter may rattle and break up during the vehicles' useful lives.
20	The drive belt pulley on your car's engine could develop fatigue cracks in the metal and break. If the drive pulley breaks, your car would not have engine cooling, battery charging and power steering. Loss of these systems could cause you to lose control of the car.
21	The drive belt pulley on your car's engine could develop fatigue cracks in the metal and break. If the drive pulley breaks, your car would not have engine cooling, battery charging and power steering. Loss of these systems could cause you to lose control of the car.
22	The emission system is modified by installing a modulator kit.The catalyst and fuel pump is inspected.
23	The emission system is modified by installing a modulator kit.The catalyst and fuel pump is inspected.
24	The emission system is modified by installing a modulator kit.The catalyst and fuel pump is inspected.(Vehicles were manufactured by Hyundai for Mitsubishi)
25	The coolant temperature signal to the control module is modified by the installation of a modulator kit.
26	The coolant temperature signal to the control module is modified by the installation of a modulator kit.
27	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
28	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
29	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
30	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
31	The vehicles in this engine family may be releasing air pollutants which exceed California standards for NMHC and NOx. To correct this condition, there will be a Voluntary Emission Recalll to replace the catalytic converter catalyst beads on vehicles in this engine family.
32	The "light" inertia weight class vehicles in this engine family may be releasing air pollutants which exceed California standards for NMHC. To correct this condition, there will be a Voluntary Emission Recall to replace the catalytic converter catalyst beads on vehicles in this engine family.
33	The "light" inertia weight class vehicles in this engine family may be releasing air pollutants which exceed California standards for NMHC. To correct this condition, there will be a Voluntary Emission Recall to replace the catalytic converter catalyst beads on vehicles in this engine family.
34	The emission tune-up label on some vehicles has an incorrect evaporative emission family designation.
35	Some trucks have been shipped with an incorrect tune-up label installed on the engine air cleaner.
36	Volvo has found that the block heater contact surface may not match correctly with the engine block as intended. In extreme circumstances the block heater may come loose from the engine block, and may possibly overheat if being used. This may cause damage if it comes in contact with with other engine compartm
37	Volvo has found that the block heater contact surface may not match correctly with the engine block as intended. In extreme circumstances the block heater may come loose from the engine block, and may possibly overheat if being used. This may cause damage if it comes in contact with with other engine compartm
38	Volvo has found that the block heater contact surface may not match correctly with the engine block as intended. In extreme circumstances the block heater may come loose from the engine block, and may possibly overheat if being used. This may cause damage if it comes in contact with with other engine compartm
39	Volvo has found that the block heater contact surface may not match correctly with the engine block as intended. In extreme circumstances the block heater may come loose from the engine block, and may possibly overheat if being used. This may cause damage if it comes in contact with with other engine compartm
40	There is the possibility of excessive chafing of the insulation of the battery cables. This could lead to a short circuit.
41	There is the possibility of excessive chafing of the insulation of the battery cables. This could lead to a short circuit.
42	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
43	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
44	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
45	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
46	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
47	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
48	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
49	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
50	The power train control module (PCM) installed on certain early production Dodge Ram pickups equipped with 3.9L engine, manual transmission, and Federal emissions, contained an uncertified calibration.
51	The vapor control valve and tube assembly on the fuel tank will be removed and replaced with an assembly which contains improved vapor control and vapor vent valves. In addition, the affected vehicles will also have a wiring harness seal replaced during this recall service.
52	The vapor control valve and tube assembly on the fuel tank will be removed and replaced with an assembly which contains improved vapor control and vapor vent valves. In addition, the affected vehicles will also have a wiring harness seal replaced during this recall service.
53	The vapor control valve and tube assembly on the fuel tank will be removed and replaced with an assembly which contains improved vapor control and vapor vent valves. In addition, the affected vehicles will also have a wiring harness seal replaced during this recall service.
54	The OBD2 systems installed on 1995 MY Sephias do not under all driving conditions perform as required by California's OBD2 regulations.Defects include: Readiness Function Code (RFC), Component Monitoring Timer and incorrect VECI label.
55	The OBD2 systems installed on 1995 MY Sephias do not under all driving conditions perform as required by California's OBD2 regulations.Defects include: Readiness Function Code (RFC), Component Monitoring Timer and incorrect VECI label.
56	Recalibration of early production volume of 1993 MY 2.5L flex fuel engines in California. This recalibration changes the certified emission levels of the family from Tier one to TLEV, allowing a recalculation of corporate NMOG average.
57	Reprogram the EMS ECM using the portable diagnostic unit (PDU) and new diskette. The PDU will flash program new operating strategies into the ECM (the strategies are identical to that used on the 1998 XK8's).
58	Some vehicles are exhibiting, under certain driving conditions, uncontrolled spark knock. Correction will consist of reflashing the PCM with a calibration that will enhance the knock detection routine so as not to permit this condition.
59	Replace engine control module with a remedied one.
60	Some vehicles may experience water intrusion into the Evaporative Emission Control System canisters.
61	This recall concerns some 1994 vehicles which may be emitting nitrogen oxides (NOx) in excess of California emissions standards. GM will conduct a Voluntary Emission Recall to correct these vehicles by replacing the calibration in the Powertrain Control Module with a new calibration. Also, the connectors on either side c
62	Dealers are to replace the evaporative emission canister purge solenoid valve. Also, the PROM calibration in the Oldsmobile Cutlass Supreme convertible, only, will be replaced.
63	Some ignition control modules may have been made without a nickel layer that helps bond to a transistor driver. Without the nickel layer, the transistor driver may become delaminated from the remaining bond layers. If the transistor driver becomes delaminated, inadequate internal heat dissipation can cause prema
64	Some ignition control modules may have been made without a nickel layer that helps bond to a transistor driver. Without the nickel layer, the transistor driver may become delaminated from the remaining bond layers. If the transistor driver becomes delaminated, inadequate internal heat dissipation can cause prema
65	Check emission testing has shown that low mileage vehicles fail to meet the NOx standard of 0.4gm/mi. GM will conduct a Voluntary Emission Recall to correct these vehicles by reflashing the VCM calibration.
66	The affected part is the crankshaft position/RPM sensor. The reason for the defect is a thermal mismatch of the materials used in the sensor. Due to different coefficients of thermal expansion of these materials, alternating thermal stress could cause a breakage of internal solder connections. Under certain conditions
67	The affected part is the crankshaft position/RPM sensor. The reason for the defect is a thermal mismatch of the materials used in the sensor. Due to different coefficients of thermal expansion of these materials, alternating thermal stress could cause a breakage of internal solder connections. Under certain conditions
68	Vehicles may experience a condition that will cause the evaporative emission control system canister to not be purged of fuel vapors for the remainder of a drive trip.
69	The Emission Information Label on these vehicles have a vacuum hose routing diagram which incorrectly shows hoses reversed in the connections to the Canister Purge Solenoid valve.
70	The Emission Information Label on these vehicles have a vacuum hose routing diagram which incorrectly shows hoses reversed in the connections to the Canister Purge Solenoid valve.
71	The Emission Information Label on these vehicles have a vacuum hose routing diagram which incorrectly shows the two vacuum ports on the Canister Purge Solenoid valve on the opposite ends of the valve. The correct representation should have both ports on the same end of the valve.
72	The Emission Information Label on these vehicles have a vacuum hose routing diagram which incorrectly shows the two vacuum ports on the Canister Purge Solenoid valve on the opposite ends of the valve. The correct representation should have both ports on the same end of the valve.
73	False MIL illumination due to the mis-wiring of the engine wire harness related to the Air/Fuel ratio sensor's ground. (Trouble code: P0420, Catalyst malfunction)
74	The Powertrain Control Module (PCM) will be reflashed with a emissions compliant calibration.
75	The affected vehicles are equipped with incorrect powertrain control modules, catalysts, and certain OBD system components. As a result, the vehicles do not meet OBD2 requirements.
76	The affected vehicles are equipped with incorrect powertrain control modules, catalysts, and certain OBD system components. As a result, the vehicles do not meet OBD2 requirements.
77	Some of the subject vehicles may have been built with the wrong LEGR valve.
78	Low tank pressure under certain conditions causes a false MIL for a leaking canister. Repair involves modification of the charcoal canister.
79	Low tank pressure under certain conditions causes a false MIL for a leaking canister. Repair involves modification of the charcoal canister.
80	Incorrect EGR part numbers were found on 29 parts examined from warranty claims returns. The parts came from two different days of engine build date codes.
81	Incorrect EGR part numbers were found on 29 parts examined from warranty claims returns. The parts came from two different days of engine build date codes.
82	Incorrect EGR part numbers were found on 29 parts examined from warranty claims returns. The parts came from two different days of engine build date codes.
83	Incorrect EGR part numbers were found on 29 parts examined from warranty claims returns. The parts came from two different days of engine build date codes.
84	Replacement of fuel tank vapor hoses.
85	Replacement of fuel tank vapor hoses.
86	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
87	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
88	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
89	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
90	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
91	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
92	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
93	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
94	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
95	Fuel vapor leak from the interface of the gap between the fuel cap and fuel filler pipe. The gap could be generated by improper dimension in distance between the top ends of inner pipe and outer pipe of the fuel filler pipe.
96	Due to a lack of inspection and correction during the assembly process, a small percentage of vehicles may have insufficient evaporative emission purge hose clearance. The hose may be installed in a position close to a heat protector for the exhaust pipe. Despite the use of heat resistant material in the hose, the ho
97	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
98	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
99	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
100	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
101	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
102	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
103	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
104	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
105	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
106	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
107	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
108	The fuel filler cap will be replaced with a cap which will properly seal the fuel filler pipe.
109	In some of the affected vehicles, the transmission control wiring harness may be routed too close to the Exhaust Gas Recirculation (EGR) sleeve and tube.
110	In some of the affected vehicles, the transmission control wiring harness may be routed too close to the Exhaust Gas Recirculation (EGR) sleeve and tube.
111	The average CO of the above subject vehicles may exceed the standard (3.4 gpm) due to insufficient robustness of emission control logic and calibration with emission parts at high mileage.
112	MMMA will conduct a Voluntary Remedial Plan to replace the VECI label on 2000 MY vehicles. The label incorrectly lists the engine family as YDSXV03.0G2H.
113	In some of the affected vehicles, the fuel fill hose material did not meet specification and may react with the gasoline in the fuel tank. Over a period of time the in-tank fuel filter may become contaminated and eventually lead to lack of engine performance, hesitation or may have an adverse affect on your vehicle's e
114	In some of the affected vehicles, the fuel fill hose material did not meet specification and may react with the gasoline in the fuel tank. Over a period of time the in-tank fuel filter may become contaminated and eventually lead to lack of engine performance, hesitation or may have an adverse affect on your vehicle's e
115	Initial production of certain 1999 California Low Emissions Vehicle standard Buick LeSabres and Pontiac Bonnevilles have a diagnostic algorithm that may cause a "false" oxygen sensor Diagnostic Test Code to set under certain conditions, resulting in MIL illumination. A voluntary recall campaign will be conducted on affe
116	Some cars have experienced small vapor leaks caused by excessive vacuum in the fuel tank.The fuel filler cap will be replaced with a cap that reduces the amount of vacuum applied to the fuel tank.
117	Some cars have experienced small vapor leaks caused by excessive vacuum in the fuel tank.The fuel filler cap will be replaced with a cap that reduces the amount of vacuum applied to the fuel tank.
118	Some cars have experienced small vapor leaks caused by excessive vacuum in the fuel tank.The fuel filler cap will be replaced with a cap that reduces the amount of vacuum applied to the fuel tank.
119	Some cars have experienced small vapor leaks caused by excessive vacuum in the fuel tank.The fuel filler cap will be replaced with a cap that reduces the amount of vacuum applied to the fuel tank.
120	Some cars have experienced small vapor leaks caused by excessive vacuum in the fuel tank.The fuel filler cap will be replaced with a cap that reduces the amount of vacuum applied to the fuel tank.
121	Some cars have experienced small vapor leaks caused by excessive vacuum in the fuel tank.The fuel filler cap will be replaced with a cap that reduces the amount of vacuum applied to the fuel tank.
122	The natural gas fuel fill valves may leak.
123	An incorrect PCM calibration may have been installed in service.
124	The crankcase ventilation valve's internal membrane/diaphragm, installed in the V12 engines of the affected vehicles, is not sufficiently resistant to condensation and, over time may become functionally impaired, affecting driveability and causing the CHECK ENGINE light to illuminate. The corrective measure consists o

The corrective measure consists o
129	The existing Powertrain Control Modules (PCMs) will be replaced using PCMs having newly certified calibrations.
130	The existing Powertrain Control Modules (PCMs) will be replaced using PCMs having newly certified calibrations.
131	The potential defect involves fuel hoses and metal lines in the engine compartment that deliver fuel to and from the engine. It is possible that seepage could occur between a hose and the metal line on either side of the hose. If this seepage occurs, a conspicuous fuel odor will be present.
132	The potential defect involves fuel hoses and metal lines in the engine compartment that deliver fuel to and from the engine. It is possible that seepage could occur between a hose and the metal line on either side of the hose. If this seepage occurs, a conspicuous fuel odor will be present.
133	The potential defect involves fuel hoses and metal lines in the engine compartment that deliver fuel to and from the engine. It is possible that seepage could occur between a hose and the metal line on either side of the hose. If this seepage occurs, a conspicuous fuel odor will be present.
134	Certain cars exhibit an incorrect hose routing on the emission label.
135	Certain cars exhibit an incorrect hose routing on the emission label.
136	The emission label on these vehicles erroneously indicates compliance with "TLEV" emissions standards.
137	The protective internal coating of the electronic crank angle sensor was manufactured from material that did not meet specifications.
138	The monoliths in the underbody catalytic converter may rattle and break up during the vehicles' useful lives.
139	The monoliths in the underbody catalytic converter may rattle and break up during the vehicles' useful lives.
140	The drive belt pulley on your car's engine could develop fatigue cracks in the metal and break. If the drive pulley breaks, your car would not have engine cooling, battery charging and power steering. Loss of these systems could cause you to lose control of the car.
141	The drive belt pulley on your car's engine could develop fatigue cracks in the metal and break. If the drive pulley breaks, your car would not have engine cooling, battery charging and power steering. Loss of these systems could cause you to lose control of the car.
142	The emission system is modified by installing a modulator kit.The catalyst and fuel pump is inspected.
143	The emission system is modified by installing a modulator kit.The catalyst and fuel pump is inspected.
144	The emission system is modified by installing a modulator kit.The catalyst and fuel pump is inspected.(Vehicles were manufactured by Hyundai for Mitsubishi)
145	The coolant temperature signal to the control module is modified by the installation of a modulator kit.
146	The coolant temperature signal to the control module is modified by the installation of a modulator kit.
147	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
148	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
149	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
150	Mitsubishi hereby notifies the EPA that a safety recall campaign concerning fuel tank replacement has been initiated for all Federal and California emissions equipped 1995 and 1996 Mitsubishi Eclipse GSX and Eagle Talon TSI ALL Wheel Drive, turbocharged vehicles.
151	The vehicles in this engine family may be releasing air pollutants which exceed California standards for NMHC and NOx. To correct this condition, there will be a Voluntary Emission Recalll to replace the catalytic converter catalyst beads on vehicles in this engine family.
152	The "light" inertia weight class vehicles in this engine family may be releasing air pollutants which exceed California standards for NMHC. To correct this condition, there will be a Voluntary Emission Recall to replace the catalytic converter catalyst beads on vehicles in this engine family.
153	The "light" inertia weight class vehicles in this engine family may be releasing air pollutants which exceed California standards for NMHC. To correct this condition, there will be a Voluntary Emission Recall to replace the catalytic converter catalyst beads on vehicles in this engine family.
154	The emission tune-up label on some vehicles has an incorrect evaporative emission family designation.
155	Some trucks have been shipped with an incorrect tune-up label installed on the engine air cleaner.
156	Volvo has found that the block heater contact surface may not match correctly with the engine block as intended. In extreme circumstances the block heater may come loose from the engine block, and may possibly overheat if being used. This may cause damage if it comes in contact with with other engine compartm

In extreme circumstances the block heater may come loose from the engine block, and may possibly overheat if being used. This may cause damage if it comes in contact with with other engine compartm
160	There is the possibility of excessive chafing of the insulation of the battery cables. This could lead to a short circuit.
161	There is the possibility of excessive chafing of the insulation of the battery cables. This could lead to a short circuit.
162	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
163	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
164	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
165	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
166	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
167	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
168	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
169	The Vehicle Emission Control Information (VECI) labels on Federal and California full sized Dodge Ram Van and Wagon models with 3.9L and 5.2L engines were incorrect.Chrysler will conduct a recall to install correct VECI labels on the subject vehicles.
170	The power train control module (PCM) installed on certain early production Dodge Ram pickups equipped with 3.9L engine, manual transmission, and Federal emissions, contained an uncertified calibration.
171	The vapor control valve and tube assembly on the fuel tank will be removed and replaced with an assembly which contains improved vapor control and vapor vent valves. In addition, the affected vehicles will also have a wiring harness seal replaced during this recall service.
172	The vapor control valve and tube assembly on the fuel tank will be removed and replaced with an assembly which contains improved vapor control and vapor vent valves. In addition, the affected vehicles will also have a wiring harness seal replaced during this recall service.
173	The vapor control valve and tube assembly on the fuel tank will be removed and replaced with an assembly which contains improved vapor control and vapor vent valves. In addition, the affected vehicles will also have a wiring harness seal replaced during this recall service.
174	The OBD2 systems installed on 1995 MY Sephias do not under all driving conditions perform as required by California's OBD2 regulations.Defects include: Readiness Function Code (RFC), Component Monitoring Timer and incorrect VECI label.
175	The OBD2 systems installed on 1995 MY Sephias do not under all driving conditions perform as required by California's OBD2 regulations.Defects include: Readiness Function Code (RFC), Component Monitoring Timer and incorrect VECI label.
176	Recalibration of early production volume of 1993 MY 2.5L flex fuel engines in California. This recalibration changes the certified emission levels of the family from Tier one to TLEV, allowing a recalculation of corporate NMOG average.
177	Reprogram the EMS ECM using the portable diagnostic unit (PDU) and new diskette. The PDU will flash program new operating strategies into the ECM (the strategies are identical to that used on the 1998 XK8's).
178	Some vehicles are exhibiting, under certain driving conditions, uncontrolled spark knock. Correction will consist of reflashing the PCM with a calibration that will enhance the knock detection routine so as not to permit this condition.
179	Replace engine control module with a remedied one.
180	Some vehicles may experience water intrusion into the Evaporative Emission Control System canisters.
181	This recall concerns some 1994 vehicles which may be emitting nitrogen oxides (NOx) in excess of California emissions standards. GM will conduct a Voluntary Emission Recall to correct these vehicles by replacing the calibration in the Powertrain Control Module with a new calibration. Also, the connectors on either side c
182	Dealers are to replace the evaporative emission canister purge solenoid valve. Also, the PROM calibration in the Oldsmobile Cutlass Supreme convertible, only, will be replaced.
183	In corrosive salt-belt markets, long term or recurring exposure to salt or wet conditions may lead to internal corrosion of the Pump Electronic Module (PEM). Corrosion may cause a faulty signal from the PEM to the fuel pump, resulting in low or no fuel pressure to the engine. Remedy: The fuel pump electronic module w
184	In corrosive salt-belt markets, long term or recurring exposure to salt or wet conditions may lead to internal corrosion of the Pump Electronic Module (PEM). Corrosion may cause a faulty signal from the PEM to the fuel pump, resulting in low or no fuel pressure to the engine. Remedy: The fuel pump electronic module w
