4327	Malfunction Indicator Lamp (MIL) illumination and the On-Board Diagnosis (OBD) system stores a fault for the oxygen sensor (part # 993 606 168 01) even if the sensor is not defective. The code relates to the oxygen sensor heating. An engine control unit data set (reprogramming) has been introduced to minimize t
4328	During transportation from the production plant to the customer the engine gets started very often for a very short time without reaching normal operating temperature. This can cause fouling of the spark plugs (Part No. 999 170 207 91) requiring their replacement. The problem is obvious to the driver, rough idle or poo
4329	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
4330	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
4331	An improperly routed fuel line could be the cause of a fuel leak. There were no changes to the vehicles during production and the vehicles are no longer being produced. Remedy: Safety Recall 26E5/R5 is being implemented on this vehicle to inspect the fuel line routing and reroute or replace as needed.
4332	An improperly routed fuel line could be the cause of a fuel leak. There were no changes to the vehicles during production and the vehicles are no longer being produced. Remedy: Safety Recall 26E5/R5 is being implemented on this vehicle to inspect the fuel line routing and reroute or replace as needed.
4333	Hard start and rough idle concerns may be attributed to a faulty glow plug relay, part number 038 907 281 C. Analysis of returned parts show internal electrical failures in only 8% do to corroded contacts and 92% found to be okay. The manufacturer states the relays have been replaced unnecessarily during replacemen
4334	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4335	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4336	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4337	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4338	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4339	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4340	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4341	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4342	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4343	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4344	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4345	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4346	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4347	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4348	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
4349	A defect in the activated carbon container (part # 99620122107) will illuminate the Malfunction Indicator Lamp (MIL). Broken plastic parts have been found, and were probably caused by assembly or disassembly processes. It is expected owners will return to Porsche dealership to have the light investigated and repairs
4350	A defect in the activated carbon container (part # 99620122107) will illuminate the Malfunction Indicator Lamp (MIL). Broken plastic parts have been found, and were probably caused by assembly or disassembly processes. It is expected owners will return to Porsche dealership to have the light investigated and repairs
4351	A defect in the activated carbon container (part # 99620122107) will illuminate the Malfunction Indicator Lamp (MIL). Broken plastic parts have been found, and were probably caused by assembly or disassembly processes. It is expected owners will return to Porsche dealership to have the light investigated and repairs
4352	A defect in the activated carbon container (part # 99620122107) will illuminate the Malfunction Indicator Lamp (MIL). Broken plastic parts have been found, and were probably caused by assembly or disassembly processes. It is expected owners will return to Porsche dealership to have the light investigated and repairs
4353	A defect in the activated carbon container (part # 99620122107) will illuminate the Malfunction Indicator Lamp (MIL). Broken plastic parts have been found, and were probably caused by assembly or disassembly processes. It is expected owners will return to Porsche dealership to have the light investigated and repairs
4354	A defect in the activated carbon container (part # 99620122107) will illuminate the Malfunction Indicator Lamp (MIL). Broken plastic parts have been found, and were probably caused by assembly or disassembly processes. It is expected owners will return to Porsche dealership to have the light investigated and repairs
4355	Spark plugs (part # 999 170 195 90) may have been fouled during transport to dealerships. Probable cause is short idling during transport. This could cause poor acceleration, and vehicle will be brought to dealership for repair. Update 2004-20 update 2 adds (2) 2004 Engine Families.
4356	Spark plugs (part # 999 170 195 90 and 999 170 210 90) may have been fouled during transport to dealerships. Probable cause is short idling/driving during transport. This could cause poor acceleration, and vehicle will be brought to dealership for repair. Update 2004-20 update 2 adds (2) 2004 Engine Families.
4357	A fault code entry to the DME (engine control unit) control unit (part # 996 618 604 00) is sometimes replaced too early in the process of finding the real problem. Most of them appear not to have a internal fault. Dealership technicians are receiving special training so the DME unit will not be replaced unless a real fau
4358	A fault code entry to the DME (engine control unit) control unit (part # 996 618 604 00) is sometimes replaced too early in the process of finding the real problem. Most of them appear not to have a internal fault. Dealership technicians are receiving special training so the DME unit will not be replaced unless a real fau
4359	A fault code entry to the DME (engine control unit) control unit (part # 996 618 604 00) is sometimes replaced too early in the process of finding the real problem. Most of them appear not to have a internal fault. Dealership technicians are receiving special training so the DME unit will not be replaced unless a real fau
4360	On-Board Diagnosis (OBD) system stores a fault entry for the oxygen sensor (part # 996 606 128 00) even if the sensor is not defective. The code relates to the oxygen sensor heating and will illuminate the Malfunction Indicator (MIL) lamp. An engine control unit data set has been introduced to minimize the risk of t
4361	Some fuel pumps (part # 955 620 103 01 and 955 620 103 21) have been replaced in the field for complaints of engine stalling or noises. There is no effect on emissions, but the vehicle could stall while driving if the fuel pump fails. An improved fuel pump has been introduced into production. No statement was given
4362	Some fuel pumps (part # 955 620 103 01 and 955 620 103 21) have been replaced in the field for complaints of engine stalling or noises. There is no effect on emissions, but the vehicle could stall while driving if the fuel pump fails. An improved fuel pump has been introduced into production. No statement was given
4363	Some fuel pumps (part # 955 620 103 01 and 955 620 103 21) have been replaced in the field for complaints of engine stalling or noises. There is no effect on emissions, but the vehicle could stall while driving if the fuel pump fails. An improved fuel pump has been introduced into production. No statement was given
4364	Some fuel pumps (part # 955 620 103 01 and 955 620 103 21) have been replaced in the field for complaints of engine stalling or noises. There is no effect on emissions, but the vehicle could stall while driving if the fuel pump fails. An improved fuel pump has been introduced into production. No statement was given
4365	Some fuel pumps (part # 955 620 103 01 and 955 620 103 21) have been replaced in the field for complaints of engine stalling or noises. There is no effect on emissions, but the vehicle could stall while driving if the fuel pump fails. An improved fuel pump has been introduced into production. No statement was given
4366	On some Cayenne Turbo vehicles the oil separator was faulty and could leak oil into the intercooler hoses. The technician would assume there was a bad seal in the turbocharger; then replace the pressure hoses, turbo and flush the intercooler, or they would replace the oil separator and pressure hoses. Examine the pre
4367	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being rep
4368	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being rep
4369	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being rep
4370	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being rep
4371	Transmission control units (part # 996 618 180 07) are being replaced due to harsh shifting of transmission, or transmission shifting too aggressively complaints from customers. Indication of manufacturer Follow-Up - None.
4372	Some vehicles have had the exhaust gasket (Part #955 111 113 20) replaced. This part is replaced as a required replacement during major engine or transmission repairs or any time the exhaust system is removed from the engine. They are not being replaced because they are defective.
4373	Some vehicles have had the exhaust gasket (Part #955 111 113 20) replaced. This part is replaced as a required replacement during major engine or transmission repairs or any time the exhaust system is removed from the engine. They are not being replaced because they are defective.
4374	There is the possibility that the signal of the Air Mass Sensor (Part No. 996 606 124 00) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects that and illuminates the Malfunction Indicator Lamp (MIL). There is no impact on the emission. Depending of the length of the signal being not pla
4375	There is the possibility that the signal of the Air Mass Sensor (Part No. 996 606 124 00) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects that and illuminates the Malfunction Indicator Lamp (MIL). There is no impact on the emission. Depending of the length of the signal being not pla
4376	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
4377	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
4378	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
4379	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
4380	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
4381	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
4382	Under certain conditions the Air cut-off valve (Part No. 993 110 337 50) can create a specific noise while in use. This noise does not impact the functionality of the part. No impact on drivability or emissions, customers are complaining about a strange noise. An improved part to minimize the possibility of the noise has b
4383	The throttle housing (part # 986 605 115 01) is not working to its specifications. The Engine Control Unit (ECU) detects this and in case of serious problems can activate limp mode. Limp home mode allows the vehicle to be driven at limited speeds so the owner may get the vehicle to the dealership for repairs. An impr
4384	The throttle housing (part # 986 605 115 01) is not working to its specifications. The Engine Control Unit (ECU) detects this and in case of serious problems can activate limp mode. Limp home mode allows the vehicle to be driven at limited speeds so the owner may get the vehicle to the dealership for repairs. An impr
4385	The throttle housing (part # 986 605 115 01) is not working to its specifications. The Engine Control Unit (ECU) detects this and in case of serious problems can activate limp mode. Limp home mode allows the vehicle to be driven at limited speeds so the owner may get the vehicle to the dealership for repairs. An impr
4386	The throttle housing (part # 986 605 115 01) is not working to its specifications. The Engine Control Unit (ECU) detects this and in case of serious problems can activate limp mode. 4387	The throttle housing (part # 986 605 115 01) is not working to its specifications. The Engine Control Unit (ECU) detects this and in case of serious problems can activate limp mode. Limp home mode allows the vehicle to be driven at limited speeds so the owner may get the vehicle to the dealership for repairs. An impr
4388	Under certain conditions it is possible that the On-Board Diagnosis (OBD) System stores a fault code entry for the Oxygen Sensor (Part No. 996 606 178 01) even if the sensor is not defective. This fault code entry relates to a problem in the Oxygen Sensor heating and will illuminate the Malfunction Indicator Lamp (MIL
4389	Under certain conditions it is possible that the On-Board Diagnosis (OBD) System stores a fault code entry for the Oxygen Sensor (Part No. 996 606 178 01) even if the sensor is not defective. This fault code entry relates to a problem in the Oxygen Sensor heating and will illuminate the Malfunction Indicator Lamp (MIL
4390	Under certain conditions it is possible that the On-Board Diagnosis (OBD) System stores a fault code entry for the Oxygen Sensor (Part No. 996 606 178 01) even if the sensor is not defective. This fault code entry relates to a problem in the Oxygen Sensor heating and will illuminate the Malfunction Indicator Lamp (MIL
4391	During transportation from the production plant to the customer the engine gets started very often for a very short time without reaching normal operating temperature. This can cause fouling of the spark plugs (Part No. 999 170 207 91) requiring their replacement. The problem is obvious to the driver, rough idle or poo
4392	When diagnosing a certain fault code, the DME (Engine) Control Unit is sometimes replaced too early in the process. Part Numbers involved are 955 618 602 00 and 955 618 601 00, 995 618 6001 10 and 955 618 604 02. In subsequent inspections, of the replaced DME's, the majority appear not to have an internal fau
4393	When diagnosing a certain fault code, the DME (Engine) Control Unit is sometimes replaced too early in the process. Part Numbers involved are 955 618 602 00 and 955 618 601 00, 995 618 6001 10 and 955 618 604 02. In subsequent inspections, of the replaced DME's, the majority appear not to have an internal fau
4394	When diagnosing a certain fault code, the DME (Engine) Control Unit is sometimes replaced too early in the process. Part Numbers involved are 955 618 602 00 and 955 618 601 00, 995 618 6001 10 and 955 618 604 02. In subsequent inspections, of the replaced DME's, the majority appear not to have an internal fau
4395	When diagnosing a certain fault code, the DME (Engine) Control Unit is sometimes replaced too early in the process. Part Numbers involved are 955 618 602 00 and 955 618 601 00, 995 618 6001 10 and 955 618 604 02. In subsequent inspections, of the replaced DME's, the majority appear not to have an internal fau
4396	When diagnosing a certain fault code, the DME (Engine) Control Unit is sometimes replaced too early in the process. Part Numbers involved are 955 618 602 00 and 955 618 601 00, 995 618 6001 10 and 955 618 604 02. In subsequent inspections, of the replaced DME's, the majority appear not to have an internal fau
4397	When diagnosing a certain fault code, the DME (Engine) Control Unit is sometimes replaced too early in the process. Part Numbers involved are 955 618 602 00 and 955 618 601 00, 995 618 6001 10 and 955 618 604 02. In subsequent inspections, of the replaced DME's, the majority appear not to have an internal fau
4398	When diagnosing a certain fault code, the DME (Engine) Control Unit is sometimes replaced too early in the process. Part Numbers involved are 955 618 602 00 and 955 618 601 00, 995 618 6001 10 and 955 618 604 02. In subsequent inspections, of the replaced DME's, the majority appear not to have an internal fau
4399	Inoperative fuel tank gauges (Part No. 996 620 832 01) are being replaced. There is no direct impact on the emissions or drivability. There is no planned follow up at this time.
4400	Inaccurate fuel level readings after refueling is caused by the fuel level sensor float contacting fuel pressure pipe inside the fuel tank. Part numbers involved are 966 620 833 02 and 966 620 833 01. Technical Service Bulletin (TSB) #2066 has been issued to dealerships to help technicians resolve the concern. The TSB
4401	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
4402	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
4403	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, would cause Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
4404	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, would cause Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
4405	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, would cause Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
4406	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, would cause Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
4407	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, causes Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
4408	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure.
4409	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure.
4410	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure.
4411	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure.
4412	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4413	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4414	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4415	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4416	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4417	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4418	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4419	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4420	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4421	Rough running concerns and various fault codes stored are related to speed (hall) sensor failure. Part number 966 606 106 02. Manufacturer is asking dealers to return parts for analysis. Information concerning the impact on emissions and emissions related test data were not sent. A change to this part was made in C
4422	Temperature sensor (part #997 606 410 00) is being replaced when the sensor has not been confirmed to be bad. The Engine Control Unit (ECU) uses the instrument clusters time value to calculate/evaluate the engine run time. When the vehicles battery goes dead and the vehicle has to be jump started the clusters ti
4423	Temperature sensor (part #997 606 410 00) is being replaced when the sensor has not been confirmed to be bad. The Engine Control Unit (ECU) uses the instrument clusters time value to calculate/evaluate the engine run time. When the vehicles battery goes dead and the vehicle has to be jump started the clusters ti
4424	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
4425	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
4426	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
4427	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
4428	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
4429	Air vent lines (purge valves, Part No. 996 110 129 05 and 996 110 129 04) are being replaced in the field for setting fault codes indicating the leak detection pump (LDP) is not working properly. The affected parts are being called in from the field for analysis. Effects on emissions and drivability are to be determined an
4430	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4431	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4432	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4433	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4434	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4435	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4436	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4437	Customers are complaining of having difficulty refueling their vehicles. Apparently the fuel tank vent valve (Part No. 996 605 203 01) is sticking making it difficult to refuel the vehicle since the pressure build up has no outlet to the carbon canister. The situation is being monitored.
4438	There is no specific complaint regarding this component (part no. 997 111 217 70 or 997 111 215 70). Metal exhaust seals located between the turbocharger and catalyst are being replaced in the field. This component is a service part which must be replaced anytime the gasket is removed. For many engine service ope
4439	On some 2006 vehicles the camshaft position sensor valve used to control the exhaust camshaft phaser, using oil pressure, may become contaminated with debris due to failure of the wire mesh oil filter screens. Once the wire mesh filter screen fails, wire mesh pieces or other debris present in the engine oil may jam t
4440	One of the downstream catalyst cans has been observed to lose retention of the substrate. Each substrate is supported by an intumescent mat. Proper fit of the substrate and mat is important for catalyst durability. The substrate is wrapped in an intumescent mat during manufacture which is then pushed into a cylind
4441	One of the downstream catalyst cans has been observed to lose retention of the substrate. Each substrate is supported by an intumescent mat. Proper fit of the substrate and mat is important for catalyst durability. The substrate is wrapped in an intumescent mat during manufacture which is then pushed into a cylind

4492	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
4493	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
4494	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
4495	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
4496	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
4497	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4498	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4499	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4500	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4501	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4502	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4503	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4504	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4505	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4506	Electronic throttle valves are being replaced based on particular Diagnostic Trouble Codes (DTC) and Malfunction Indicator Lamp (MIL) illumination. Concerns of engine hesitation is also being reported. The manufacturer is currently monitoring the situation. Part number involved is 948 605 115 03.
4507	Concerns of engines being hard to start and Malfunction Indicator Lamp (MIL) illumination may be associated with engine temperature sensor failure. The manufacturer has no follow up plans at this time. Part numbers involved are 955 106 125 00 and 955 106 125 01. Update 1 adds 2009 Engine Family and updates s
4508	Concerns of engines being hard to start and Malfunction Indicator Lamp (MIL) illumination may be associated with engine temperature sensor failure. The manufacturer has no follow up plans at this time. Part numbers involved are 955 106 125 00 and 955 106 125 01. Update 1 adds 2009 Engine Family and updates s
4509	Concerns of engines being hard to start and Malfunction Indicator Lamp (MIL) illumination may be associated with engine temperature sensor failure. The manufacturer has no follow up plans at this time. Part numbers involved are 955 106 125 00 and 955 106 125 01. Update 1 adds 2009 Engine Family and updates s
4510	Concerns of engines being hard to start and Malfunction Indicator Lamp (MIL) illumination may be associated with engine temperature sensor failure. The manufacturer has no follow up plans at this time. Part numbers involved are 955 106 125 00 and 955 106 125 01. Update 1 adds 2009 Engine Family and updates s
4511	Air intake tubes are being replaced based on Malfunction Indicator Lamp (MIL) illumination. No manufacturer follow up is planned at this time. Part number involved are 955 110 046 00.
4512	Air intake tubes are being replaced based on Malfunction Indicator Lamp (MIL) illumination. No manufacturer follow up is planned at this time. Part number involved are 955 110 046 00.
4513	Air intake tubes are being replaced based on Malfunction Indicator Lamp (MIL) illumination. No manufacturer follow up is planned at this time. Part number involved are 955 110 046 00.
4514	Air intake tubes are being replaced based on Malfunction Indicator Lamp (MIL) illumination. No manufacturer follow up is planned at this time. Part number involved are 955 110 046 00.
4515	Air intake tubes are being replaced based on Malfunction Indicator Lamp (MIL) illumination. No manufacturer follow up is planned at this time. Part number involved are 955 110 046 00.
4516	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4517	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4518	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4519	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4520	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4521	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4522	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4523	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4524	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4525	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4526	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4527	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4528	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
4529	Replacement of fuel injector valves for Malfunction indicator lamp (MIL) illumination associated with engine miss fire is being investigated. Complaints of hesitation and rough idle have also been reported. Returned parts tested by the manufacturer have been found to perform as designed. Part number 955 605 031 00
4530	Replacement of fuel injector valves for Malfunction indicator lamp (MIL) illumination associated with engine miss fire is being investigated. Complaints of hesitation and rough idle have also been reported. Returned parts tested by the manufacturer have been found to perform as designed. Part number 955 605 031 00
4531	Replacement of fuel injector valves for Malfunction indicator lamp (MIL) illumination associated with engine miss fire is being investigated. Complaints of hesitation and rough idle have also been reported. Returned parts tested by the manufacturer have been found to perform as designed. Part number 955 605 031 00
4532	Fuel tanks are being replaced for complaints of hard refueling, in some cases the anti-spit-back valve was not welded correctly. Fuel tank part numbers 955 201 075 10, 955 201 075 11, 955 201 075 12, 955 201 075 13, and 955 201 075 15 are involved. No drivability or emissions related concerns were provided. A pro

4591	Some vehicles have experienced an abnormal noise and/or vibration. Kia believes this may occur when a metal clip separates from the steel axis rod of the air Induction Control Valve (ICV). The separation of this clip may alter the seal of the ICV causing an increase in air intake. however, the ECU is able to compensa
4592	Some vehicles equipped with 3.8L engines and 4WD systems may have a communication error with a generic scan tool. The 4WD vehicle control strategy includes a 4WD electronic control unit (4WD-ECU). It has come to Hyundai's attention that some generic scan tools may improperly interact with the 4WD-ECU leading
4593	Some vehicles equipped with 3.8L engines and 4WD systems may have a communication error with a generic scan tool. The 4WD vehicle control strategy includes a 4WD electronic control unit (4WD-ECU). It has come to Hyundai's attention that some generic scan tools may improperly interact with the 4WD-ECU leading
4594	Under certain driving conditions, the Onboard Diagnostic (OBD) system may falsely detect a malfunction of the thermostat. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A Powertrain Control Module (PCM) with an improved calibration has been applied to the assembly line and has b
4595	Under certain driving conditions, the Onboard Diagnostic (OBD) system may falsely detect a malfunction of the thermostat. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A Powertrain Control Module (PCM) with an improved calibration has been applied to the assembly line and has b
4596	Under certain driving conditions, the Onboard Diagnostic (OBD) system may falsely detect a malfunction of the thermostat. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A Powertrain Control Module (PCM) with an improved calibration has been applied to the assembly line and has b
4597	Malfunction Indicator Lamp (MIL) illumination with trouble codes P0118, P0117 and P0116 stored in the Engine Control Units (ECU) memory may be the result of the Engine Coolant Sensor (ECT) failing. Failures are attributed to internal electrical concerns of part number 059 919 501 A. The effect on emissions and dri
4598	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4599	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4600	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4601	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4602	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4603	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4604	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4605	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4606	The evap canister drain box may be blocked by a spider's nest and the MIL illuminates.Remedy: An improved evap canister drain box will be applied to the assembly line and be available for repair under Running Change/Field Fix #1Z. When this defect occurs the MIL illuminates and the vehicle will likely be brought i
4607	The knock control system may falsely interpret electrical noise as a knock signal thus causing a retarded ignition timing condition.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change #Y8. When this defect occurs the vehicle will lik
4608	The knock control system may falsely interpret electrical noise as a knock signal thus causing a retarded ignition timing condition.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change #Y8. When this defect occurs the vehicle will lik
4609	On some 2008 Dodge Caliber vehicles equipped with a 1.8L engine, the on-board diagnostic calibration for the Downstream Oxygen Sensor Slow response Diagnostic is overly sensitive and may cause MIL illumination for diagnostic trouble code P0139 when no problem exists.Remedy: Chrysler has issued TSB 18-011-08
4610	On some 2008 Dodge Caliber vehicles equipped with a 1.8L engine, the on-board diagnostic calibration for the Downstream Oxygen Sensor Slow response Diagnostic is overly sensitive and may cause MIL illumination for diagnostic trouble code P0139 when no problem exists.Remedy: Chrysler has issued TSB 18-011-08
4611	Some vehicles may illuminate the MIL for P1607 (PCM Internal Shutdown Timer Rationality) when no problem exists. The Shutdown Timer Rationality may incorrectly diagnose a problem if the engine fails to properly start and engine speed returns to zero after the key is released.Remedy: Chrysler has issued TSB 18-0
4612	Some vehicles may illuminate the MIL for P1607 (PCM Internal Shutdown Timer Rationality) when no problem exists. The Shutdown Timer Rationality may incorrectly diagnose a problem if the engine fails to properly start and engine speed returns to zero after the key is released.Remedy: Chrysler has issued TSB 18-0
4613	On some vehicles equipped with 2.7L engines and certified for flex fuel usage an error in the calculated ethanol content can result in long crank times and illumination of the MIL for P0171 (Fuel System Lean Bank 1) or P0174 (Fuel System Lean bank 2).Remedy: Chrysler has issued TSB 18-028-08 to instruct technicia
4614	On some vehicles equipped with 2.7L engines and certified for flex fuel usage and error in the calculated ethanol content can result in long crank times and illumination of the MIL for P0171 (Fuel System Lean Bank 1) or P0174 (Fuel System Lean bank 2).Remedy: Chrysler has issued TSB 18-028-08 to instruct technici
4615	At engine start under very cold ambient conditions, the element of the air fuel ratio sensor may crack due to the thermal shock by water condensed on the sensor element. A Power train Control Module with a improved calibration has been applied to the assembly line and is made available for repair under Running Ch
4616	A delay in the engagement of the Valve Timing Control system causes the MIL to illuminate.Remedy: When this defect occurs the vehicle will likely be brought in for service and repaired under emission warranty. UPDATE 9-22-2008: An ECM with an improved calibration has been applied to the assembly line and is mad
4617	A delay in the engagement of the Valve Timing Control system causes the MIL to illuminate.Remedy: When this defect occurs the vehicle will likely be brought in for service and repaired under emission warranty. UPDATE 9-22-2008: An ECM with an improved calibration has been applied to the assembly line and is mad
4618	A delay in the engagement of the Valve Timing Control system causes the MIL to illuminate.Remedy: When this defect occurs the vehicle will likely be brought in for service and repaired under emission warranty. UPDATE 9-22-2008: An ECM with an improved calibration has been applied to the assembly line and is mad
4619	A delay in the engagement of the Valve Timing Control system causes the MIL to illuminate.Remedy: When this defect occurs the vehicle will likely be brought in for service and repaired under emission warranty. UPDATE 9-22-2008: An ECM with an improved calibration has been applied to the assembly line and is mad
4620	A delay in the engagement of the Valve Timing Control system causes the MIL to illuminate.Remedy: When this defect occurs the vehicle will likely be brought in for service and repaired under emission warranty. UPDATE 9-22-2008: An ECM with an improved calibration has been applied to the assembly line and is mad
4621	A delay in the engagement of the Valve Timing Control system causes the MIL to illuminate.Remedy: When this defect occurs the vehicle will likely be brought in for service and repaired under emission warranty. UPDATE 9-22-2008: An ECM with an improved calibration has been applied to the assembly line and is mad
4622	A delay in the engagement of the Valve Timing Control system causes the MIL to illuminate.Remedy: When this defect occurs the vehicle will likely be brought in for service and repaired under emission warranty. UPDATE 9-22-2008: An ECM with an improved calibration has been applied to the assembly line and is mad
4623	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4624	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4625	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4626	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4627	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4628	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4629	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4630	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4631	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4632	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4633	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4634	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4635	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change wa
4636	Engine speed sensors are being replaced for Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0335. No pattern has become evident as the complaints seem to be random. The manufacturer will continue to monitor the concern, no follow up is planned at this time. There was no report o
4637	Engine speed sensors are being replaced for Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0335. No pattern has become evident as the complaints seem to be random. The manufacturer will continue to monitor the concern, no follow up is planned at this time. There was no report o
4638	Engine speed sensors are being replaced for Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0335. No pattern has become evident as the complaints seem to be random. The manufacturer will continue to monitor the concern, no follow up is planned at this time. There was no report o
4639	Engine speed sensors are being replaced for Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0335. No pattern has become evident as the complaints seem to be random. The manufacturer will continue to monitor the concern, no follow up is planned at this time. There was no report o
4640	Engine speed sensors are being replaced for Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0335. No pattern has become evident as the complaints seem to be random. The manufacturer will continue to monitor the concern, no follow up is planned at this time. There was no report o
4641	Engine speed sensors are being replaced for Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0335. No pattern has become evident as the complaints seem to be random. The manufacturer will continue to monitor the concern, no follow up is planned at this time. There was no report o
4642	Catalytic convertors have been replaced for concerns of rattling noises from under the vehicle. Part numbers 996 113 021 97 and 996 113 022 97 have been reported. There is no information provided for the effects on emissions or drivability. The issue is currently being investigated and there is no follow up plan at this
4643	Catalytic convertors have been replaced for concerns of rattling noises from under the vehicle. Part numbers 996 113 021 97 and 996 113 022 97 have been reported. There is no information provided for the effects on emissions or drivability. The issue is currently being investigated and there is no follow up plan at this
4644	Catalytic convertors have been replaced for concerns of rattling noises from under the vehicle. Part number 996 113 023 07 has been reported. There is no information provided for the effects on emissions or drivability. The issue is currently being investigated and there is no follow up plan at this time. Update 1 dated
4645	Catalytic convertors have been replaced for concerns of rattling noises from under the vehicle. Part number 996 113 023 07 has been reported. There is no information provided for the effects on emissions or drivability. The issue is currently being investigated and there is no follow up plan at this time. Update 1 dated
4646	Crankshaft position sensors are being replaced for illuminating the Malfunction Indicator Lamp (MIL). Part number 955 606 147 00 has been reported. No information pertaining to emissions and drivability was reported. No manufacturer follow up is planned at this time.
4647	Crankshaft position sensors are being replaced for illuminating the Malfunction Indicator Lamp (MIL). Part number 955 606 147 00 has been reported. No information pertaining to emissions and drivability was reported. No manufacturer follow up is planned at this time.
4648	Crankshaft position sensors are being replaced for illuminating the Malfunction Indicator Lamp (MIL). Part number 955 606 147 00 has been reported. No information pertaining to emissions and drivability was reported. No manufacturer follow up is planned at this time.
4649	Crankshaft position sensors are being replaced for illuminating the Malfunction Indicator Lamp (MIL). Part number 955 606 147 00 has been reported. No information pertaining to emissions and drivability was reported. No manufacturer follow up is planned at this time.
4650	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P044 may be caused by a concern with fuel tank vent lines. There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
4651	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P044 may be caused by a concern with fuel tank vent lines. There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
4652	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P044 may be caused by a concern with fuel tank vent lines. There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
4653	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P044 may be caused by a concern with fuel tank vent lines. There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
4654	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4655	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4656	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4657	Air mass sensors are being replaced do to water entry concerns, which causes Malfunction Indicator Lamp (MIL) illumination. The supplier has extended the seal on the sensor, part number 987 606 125 00, to eliminate the possibility of water entry. Update 2008-56 (reported as new report) dated 12/18/2008 adds the
4658	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
4659	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
4660	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4661	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4662	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4663	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4664	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4665	Secondary air pumps, 996 605 104 00, are being replaced for concerns of Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follo
4666	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4667	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4668	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4669	The Throttle Housing (Part No. 996 605 115 01) is not working according to its specifications and will cause the Malfunction Indicator Lamp (MIL) to illuminate. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were repor
4670	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4671	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4672	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4673	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4674	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4675	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4676	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4677	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4678	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4679	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
4680	Malfunction Indicator Lamp (MIL) illumination may be caused by a concern with fuel tank vent lines. The vehicle may also exhibit difficulty stating after refueling. The part number involved is 987 110 128 01. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacemen
4681	Malfunction Indicator Lamp (MIL) illumination may be caused by a concern with fuel tank vent lines. The vehicle may also exhibit difficulty stating after refueling. The part number involved is 987 110 128 01. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacemen
4682	Glow plug failure caused by cracking, defective heater element and electrical malfunctions will illuminate the Malfunction Indicator Lamp. Diagnostic trouble codes P161A through D will be stored by the Engine Control Module. Improvements in the ultra sonic check and a reduction in maximum glow plug temperature were
4683	Thermostat failure caused by distorted o-rings, poor fitting thermostat plugs or sticking concerns can cause Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P3081 and P2181. Concerns of coolant leakage have also been reported. Part number 06B 121 111 K was reported as the causal
4684	Malfunction Indicator Lamp (MIL) illumination, rough running concerns with numerous miss fire codes stored in the Engine Control Units (ECU) memory can be caused by malfunctioning ignition coils. Analysis of sample parts shows that the ignition coils may have internal electrical problems (vendor problem) as well as ir
4685	On some vehicles the exhaust manifolds may develop a crack. the crack forms along the weld which attaches the two-in-one collector strap to the manifold. This strap, which is designed to prevent cracking of the manifold at the terminal collector, can over-constrain the thermal expansion of the manifold at extremely hi
4686	On some vehicles the exhaust manifolds may develop a crack. the crack forms along the weld which attaches the two-in-one collector strap to the manifold. This strap, which is designed to prevent cracking of the manifold at the terminal collector, can over-constrain the thermal expansion of the manifold at extremely hi
4687	On some vehicles the exhaust manifolds may develop a crack. the crack forms along the weld which attaches the two-in-one collector strap to the manifold. This strap, which is designed to prevent cracking of the manifold at the terminal collector, can over-constrain the thermal expansion of the manifold at extremely hi
4688	On some vehicles the exhaust manifolds may develop a crack. the crack forms along the weld which attaches the two-in-one collector strap to the manifold. This strap, which is designed to prevent cracking of the manifold at the terminal collector, can over-constrain the thermal expansion of the manifold at extremely hi
4689	Some vehicles have experienced MIL illumination with a DTC P0170 or P0171 indicating an abnormal fuel trim caused by a fuel pump malfunction. Vehicles with malfunctioning fuel pumps also experience poor engine starting, hesitation and other engine performance issues. Hyundai's fuel pump supplier changed sub-
4690	Some vehicles have experienced MIL illumination with a DTC P0170 or P0171 indicating an abnormal fuel trim caused by a fuel pump malfunction. Vehicles with malfunctioning fuel pumps also experience poor engine starting, hesitation and other engine performance issues. Hyundai's fuel pump supplier changed sub-
4691	Some vehicles have experienced MIL illumination with a DTC P0170 or P0171 indicating an abnormal fuel trim caused by a fuel pump malfunction. 4759	Some vehicles equipped with a Continuously Variable Transmission (CVT) the On Board Diagnostic (OBD) calibrations for the Fuel System Lean and TPS/MAP Performance diagnostics are overly sensitive and may cause MIL illumination for DTCs P0171 or P2173, respectively, when no problem exists.Remedy: A TSB was
4760	Some vehicles equipped with a Continuously Variable Transmission (CVT) the On Board Diagnostic (OBD) calibrations for the Fuel System Lean and TPS/MAP Performance diagnostics are overly sensitive and may cause MIL illumination for DTCs P0171 or P2173, respectively, when no problem exists.Remedy: A TSB was
4761	Some vehicles equipped with a Continuously Variable Transmission (CVT) the On Board Diagnostic (OBD) calibrations for the Fuel System Lean and TPS/MAP Performance diagnostics are overly sensitive and may cause MIL illumination for DTCs P0171 or P2173, respectively, when no problem exists.Remedy: A TSB was
4762	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4763	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4764	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4765	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4766	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4767	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4768	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4769	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4770	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4771	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4772	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4773	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4774	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4775	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4776	Some vehicles may illuminate the MIL for P0740 (Torque Converter Clutch Circuit) when no problem exists. The MIL can illuminate if the A/C compressor engages when vehicle speed is greater than 85 MPH causing the torque converter to change from full to partial lock to assure proper lubrication. This condition was n
4777	The OBD-II completion rate for the evaporative emission monitor is not currently meeting the in-use monitoring requirements.Remedy: Nissan will conduct a voluntary recall campaign to reprogram the Electronic Control Module (ECM). 9/29/2008: Nissan issued voluntary emissions recall NE-9-29-8.
4778	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4779	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4780	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4781	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4782	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4783	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4784	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4785	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4786	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4787	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
4788	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining

4951	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4952	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4953	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4954	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4955	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
4956	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4957	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
4958	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock.Remedy: The oxygen sensor shield design was changed for the 2008MY. Affected vehicles may likely be brought to a dealership for repair due to the illumination of the MIL. The oxygen sensor will be repl
4959	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock.Remedy: The oxygen sensor shield design was changed for the 2008MY. Affected vehicles may likely be brought to a dealership for repair due to the illumination of the MIL. The oxygen sensor will be repl
4960	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock.Remedy: The oxygen sensor shield design was changed for the 2008MY. Affected vehicles may likely be brought to a dealership for repair due to the illumination of the MIL. The oxygen sensor will be repl
4961	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
4962	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
4963	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
4964	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
4965	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
4966	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
4967	The vehicle emission control information (VECI) label on some vehicles does not include the emission control system identifier "TC" for the turbocharger.Remedy: Chrysler will conduct a voluntary emissions recall (H43) to replace the VECI label on affected vehicles.
4968	In the presence of a certain fuel system rich faults certain vehicles equipped with 1.8L engines may not be able to store a DTC and illuminate the MIL until emissions reach as high as 2.4 times the emission standard to which the vehicle was certified.Remedy: Corrected software and calibrations have been made availab
4969	The vehicles were built with emissions labels that are correct, but they will not be destroyed when removed. Part numbers involved are, for 2008 A 132 221 00 01 and for 2009 A 132 221 03 01. The manufacturer has initiated a voluntary service campaign and will relabel vehicles at their next workshop visit. Update date
4970	The vehicles were built with emissions labels that are correct, but they will not be destroyed when removed. Part numbers involved are, for 2008 A 132 221 00 01 and for 2009 A 132 221 03 01. The manufacturer has initiated a voluntary service campaign and will relabel vehicles at their next workshop visit. Update date
4971	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
4972	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
4973	Poor soldering of the internal electrical coil wire to the flat pin connector may cause the purge valve to stick closed. When the valve sticks closed the fuel vapors are not allowed to return to the fuel tank from the charcoal canister. Eventually the canister will become saturated and will emit fuel vapors into the atmosphere
4974	The manufacturer discovered vehicles being shipped to cold climate areas were built with the wrong air cleaner assembly. Cold climates require an air cleaner housing that will provide warm air to the engine during the warm up period. There is no effect on drivability or emissions, so no emissions testing is planned. As a
4975	The manufacturer discovered vehicles being shipped to cold climate areas were built with the wrong air cleaner assembly. Cold climates require an air cleaner housing that will provide warm air to the engine during the warm up period. There is no effect on drivability or emissions, so no emissions testing is planned. As a
4976	Thumping or knocking from the fuel tank area during or shortly after driving may be caused by a plugged evaporative canister. Part number 4F0 201 801 B/A were reported. The canister can become plugged by sand, no indication was given as to where the sand comes from. The filter element was to fine in the original
4977	The diaphragm on the fuel pressure regulator is inclined and abrasion may occur on part of the seal side which may result in a deterioration of performance. In this case fuel pressure will drop after the engine is stopped. They may experience longer than normal crank times due to a slowed ability to build-up fuel press
4978	Some NISSAN 2003, 2004, 2005 vehicles have a throttle valve shaft problem. On opening and closing the On-Board Diagnostics (OBD) system will diagnose any incorrect throttle position and illuminates the Malfunction Indicator Light (MIL). The vehicle owner will easily recognize the vehicle is not operating properly and
4979	The camshaft position sensor (CMP) is protected against engine oil by a cupped shaped cover. During the manufacturing process this cover could be deformed to the extent that the 0-ring between the sensor and the cover does not seal properly. Engine oil can then seep into the cover and disable the sensor. For vehicl
4980	Some lock pins and housings for Variable Valve Timing Control System have been manufactured out of specification or contaminated with foreign objects. This may lead to unstable valve timing under cold engine starting conditions. A loud knocking noise occurs.Remedy: Part quality has been improved. When this de
4981	Turbo charger actuating or adjustment rods may become corroded at the ball stud mechanism. The ball stud and linkage will become stiff resulting in delayed action of the turbo. The impact on emissions has not been determined and no test data was provided. Part numbers involved are 997 123 013 X, 997 123 013 7
4982	Some lock pins and housings for Variable Valve Timing Control System have been manufactured out of specification or contaminated with foreign objects. This may lead to unstable valve timing under cold engine starting conditions. A loud knocking noise occurs.Remedy: Part quality has been improved. When this de
4983	Turbo charger actuating or adjustment rods may become corroded at the ball stud mechanism. The ball stud and linkage will become stiff resulting in delayed action of the turbo. The impact on emissions has not been determined and no test data was provided. Part numbers involved are 997 123 013 X, 997 123 013 7
4984	Turbo charger actuating or adjustment rods may become corroded at the ball stud mechanism. The ball stud and linkage will become stiff resulting in delayed action of the turbo. The impact on emissions has not been determined and no test data was provided. Part numbers involved are 997 123 013 X, 997 123 013 7
4985	Because of thermal shock conditions during high performance driving events and due to different material expansions the welding points of the metal monoliths of the affected converters may break causing a rattling noise. If left unattended this could lead to a deformation of the monolith's cell structure. Update dated
4986	Because of thermal shock conditions during high performance driving events and due to different material expansions the welding points of the metal monoliths of the affected converters may break causing a rattling noise. If left unattended this could lead to a deformation of the monolith's cell structure. Update dated
4987	Because of thermal shock conditions during high performance driving events and due to different material expansions the welding points of the metal monoliths of the affected converters may break causing a rattling noise. If left unattended this could lead to a deformation of the monolith's cell structure. Update dated
4988	A malfunction of Fuel Delivery Module/Sender (FDM) (part C2C24164) will cause a wrong fuel gage reading or a illuminated Malfunction Indicatpr Lamp (MIL). The cause is deterioration of the sender resistance track caused by a reaction with sulfides that are in fuel. Diagnostic Trouble Code (DTC) P0460 is stored in the
4989	A rattle from under the hood and or a loss of performance can be caused by the Variable Intake System (VIS) actuator arm (part LKB000120) becoming detached. Due to improper diagnosis complete intake manifolds are being replaced in the field. With the VIS2 valve inoperative there is a flat spot in the torque curve
4990	Affected part number 11531485847 (thermostat). The seal between the thermostat and the thermostat housing is not compatible with the engine cooling fluid causing a leak. The decreasing cooling fluid level will cause the engine to exceed 115 degrees Celsius that will result in the coolant warning light to illuminate.Re
4991	Affected part number 11531485847 (thermostat). The seal between the thermostat and the thermostat housing is not compatible with the engine cooling fluid causing a leak. The decreasing cooling fluid level will cause the engine to exceed 115 degrees Celsius that will result in the coolant warning light to illuminate.Re
4992	Malfunction Indicator Lamp (MIL) illumination associated with numerous Diagnostic Trouble Codes (DTC) may be caused by defective oxygen sensors. It was discovered the sensors were damaged during the material handling and assembly process. This concern will not affect drivability but will result in an increase of tai
4993	Malfunction Indicator Lamp (MIL) illumination associated with numerous Diagnostic Trouble Codes (DTC) may be caused by defective oxygen sensors. It was discovered the sensors were damaged during the material handling and assembly process. This concern will not affect drivability but will result in an increase of tai

5013	Upon refueling, if the filler cap is forcefully pushed and turned with uneven downward pressure while opening, the cap may get stuck to the filler pipe neck, and opening and closing of the cap may become difficult. If the top of the cap is forcefully pulled in this condition, it may come off from the bottom portion of the c
5014	Upon refueling, if the filler cap is forcefully pushed and turned with uneven downward pressure while opening, the cap may get stuck to the filler pipe neck, and opening and closing of the cap may become difficult. If the top of the cap is forcefully pulled in this condition, it may come off from the bottom portion of the c
5015	Upon refueling, if the filler cap is forcefully pushed and turned with uneven downward pressure while opening, the cap may get stuck to the filler pipe neck, and opening and closing of the cap may become difficult. If the top of the cap is forcefully pulled in this condition, it may come off from the bottom portion of the c
5016	Engine vibration causes the cannister purge valve to malfunction. The valve can fail in either the open or closed position. The MIL will illuminate shortly after the valve sticks. A valve stuck in the closed postion will vent fuel vapors into the atmosphere, once "diagnosed" the overall emissions would never get out of contro
5017	Some Superduty trucks have a federal calibration with the Cold Start Emission Reduction (CSER), OBD monitor disabled. Although not required by EPA OBD regulations, the CSER monitor is required by CARB OBD regulations and was contained in the certification documentation supplied to EPA.Remedy: Ford plans to cor
5018	Some Superduty trucks have a federal calibration with the Cold Start Emission Reduction (CSER), OBD monitor disabled. Although not required by EPA OBD regulations, the CSER monitor is required by CARB OBD regulations and was contained in the certification documentation supplied to EPA.Remedy: Ford plans to cor
5019	Some Superduty trucks have a federal calibration with the Cold Start Emission Reduction (CSER), OBD monitor disabled. Although not required by EPA OBD regulations, the CSER monitor is required by CARB OBD regulations and was contained in the certification documentation supplied to EPA.Remedy: Ford plans to cor
5020	Some Superduty trucks have a federal calibration with the Cold Start Emission Reduction (CSER), OBD monitor disabled. Although not required by EPA OBD regulations, the CSER monitor is required by CARB OBD regulations and was contained in the certification documentation supplied to EPA.Remedy: Ford plans to cor
5021	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of this failure is inappropriate calibration of the PCM.Remedy: When this defect occurs the vehicle likely will be brought to a dealership and diagnosed under emission warranty. A PCM with improved calibration has be
5022	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
5023	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
5024	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
5025	The OBD system may falsely detect a malfunction of IMA battery current sensor when 12V battery voltage is low. The cause of the failure is inappropriate calibration of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair under Running Chan
5026	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
5027	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
5028	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
5029	The OBD system may falsely detect a malfunction of CAN communication between MCM and BCMM when 12V battery voltage is low. The cause of the failure is inappropriate programming of the OBD system.Remedy: A PCM with a correct calibration has been applied to the assembly line and is made available for repair
5030	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
5031	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
5032	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
5033	During engine start the OBD system may falsely detect a malfunction of Crank Position Sensor when the cranking speed is reduced due to a calibration of the PCM. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration will be applied to the assembly line and is ma
5034	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
5035	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
5036	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
5037	Injection valves are being replaced by dealers for customer complaints of rough idle, hesitation and engine miss fire. Part number 948 605 130 01 is involved.
5038	Injection valves are being replaced by dealers for customer complaints of rough idle, hesitation and engine miss fire. Part number 948 605 130 01 is involved.
5039	Injection valves are being replaced by dealers for customer complaints of rough idle, hesitation and engine miss fire. Part number 948 605 130 01 is involved.
5040	Oxygen sensor 955 606 168 00 is being replaced by dealers based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes. A production change was made in March of 2008 and the concern will continue to be monitored. No report of drivability concerns or emissions impact was provided. U
5041	Oxygen sensor 955 606 168 00 is being replaced by dealers based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes. A production change was made in March of 2008 and the concern will continue to be monitored. No report of drivability concerns or emissions impact was provided. U
5042	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fol
5043	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fol
5044	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fol
5045	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fol
5046	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
5047	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
5048	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
5049	Malfunction Indicator Lamp (MIL) illumination is alerting owners to failure of the pre-catalyst oxygen sensor part number 997 606 128 02. There is no impact on drivability and the impact on emissions is not known at the time of this report.
5050	Malfunction Indicator Lamp (MIL) illumination is alerting owners to failure of the pre-catalyst oxygen sensor part number 997 606 128 02. There is no impact on drivability and the impact on emissions is not known at the time of this report.
5051	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5052	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5053	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5054	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5055	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5056	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5057	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5058	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5059	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5060	Erroneous fault code C151 is being set in numerous control units because the transmission control unit is set to a configuration that is not recognized by the test equipment. A Technical Service Bulletin was sent to dealers to aid in explaining the concern. A permanent repair is under investigation.
5061	Some vehicles may illuminate the MIL for P1607 (PCM Internal Shutdown Timer Rationality) when no problem exists. The Shutdown Timer Rationality may incorrectly diagnose a problem if the engine fails to properly start and engine speed returns to zero after the key is released.Remedy: Chrysler has issued TSB 18-0
5062	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5063	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5064	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5065	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5066	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5067	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5068	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5069	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5070	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5071	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5072	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5073	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5074	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5075	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5076	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5077	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5078	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5079	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5080	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5081	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5082	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5083	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5084	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5085	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5086	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5087	Fuel pressure regulators are being replaced for concerns of engine miss fire and no start concerns. In some cases the fuel pump was also replaced for low fuel pressure concerns. Part numbers 955 620 841 10 and 955 620 841 30 are involved in the defect. Regulator and/or fuel pump failures can cause hesitation or ro
5088	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
5089	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
5090	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
5091	Carbon container valves are being replaced for customer complaints of howling noises. Part number 996 605 213 01. There is no impact on drivability and the impact on emissions is yet to be determined. The manufacturer is currently monitoring the situation and no follow up is planned at the time this report was subm
5092	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5093	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5094	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5095	Customer complaints of rattling noises from the engine compartment lead technicians to replace the exhaust manifold which includes a catalytic converter. In some instances Diagnostic Trouble Codes of P0430 and P0420 may be stored in the Electronic Control Unit, the majority however did not. Part numbers 996 113
5096	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0446, 0451, 0456 and 0455 result in replacement of the fuel tank vent lines which contains the purge valve. Part number 996 110 129 52 is involved in this concern. There is no impact on emissions as vapors will be sent to the intake m
5097	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0446, 0451, 0456 and 0455 result in replacement of the fuel tank vent lines which contains the purge valve. Part number 996 110 129 52 is involved in this concern. There is no impact on emissions as vapors will be sent to the intake m
5098	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5099	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5100	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5101	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5102	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5103	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5104	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5105	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5106	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5107	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5108	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
5109	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 601 00. There is no impact on emissions or drivability because the ECU would have to be r
5110	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 601 00. There is no impact on emissions or drivability because the ECU would have to be r
5111	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 601 00. There is no impact on emissions or drivability because the ECU would have to be r
5112	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 604 02. There is no impact on emissions or drivability because the ECU would have to be r
5113	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 604 02. There is no impact on emissions or drivability because the ECU would have to be r
5114	Leak Detection Pump replacement based on Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC). The related DTC codes are P0442, 0455 and 0456. The failures may be related to lack of sufficient vacuum to the pump. Part numbers 3C0 9006 201, 3C0 906 201 A, 1K0 906 201
5115	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
5116	Over crimping of the steel shell during the production process, of the catalyst, allows channeling in the mat wrapping the monolith. During driving the catalyst erodes and develops an increasing crack which allows the release of uncontrolled emissions. This condition affects vehicles built between 12/2006 and 12/2007. F

5202	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5203	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5204	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5205	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5206	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5207	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5208	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5209	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5210	These vehicles are equipped with aluminum Fuel Delivery Pipes (fuel rails). Lexus has determined that ethanol fuels with a low moisture content will corrode the internal surface of the fuel rails. As this condition progresses the Malfunction Indicator Light (MIL) may illuminate. Over time, the corrosion will create a pinho
5211	The catalytic converters may become damaged from continued operation in 'limp-in' mode following a camshaft position sensor fault. Remedy: Chrysler will reprogram the vehicle's Powertrain Control Module.
5212	The catalytic converters may become damaged from continued operation in 'limp-in' mode following a camshaft position sensor fault. Remedy: Chrysler will reprogram the vehicle's Powertrain Control Module.
5213	
5214	Improved service part. Emissions impact - follow-up with mfg.
5215	Improved service part. Emissions impact - follow-up with mfg.
5216	Some vehicles may have ignition coils that could malfunction under certain conditions. If this happens the Malfunction Indicator Lamp (MIL) will illuminate. Remedy: Dealers will inspect and, if necessary, install new ignition coils.
5217	The Powertrain Control Module (PCM) may not be able to detect a completely blocked Exhaust Gas Recirculation (EGR) valve or passage. Without this ability a blocked valve or passage may cause the engine to emit nitrogen oxides at levels which may exceed California Emissions Standards. Remedy: Chrysler dealers
5218	The fuel pump module in these vehicles may not be compatible with the instrument cluster software and overstates the actual fuel level by 1/4 of a tank. This could cause the vehicle to run out of gas and cause a crash without warning. Remedy: Chrysler dealers will replace the fuel pump module and reconfigure the T
5219	An incorrect Positive Crankcase Ventilation (PCV) valve may have been installed on these vehicles. Remedy: Chrysler dealers will inspect the vehicle's PCV and replace it if necessary.
5220	An incorrect Positive Crankcase Ventilation (PCV) valve may have been installed on these vehicles. Remedy: Chrysler dealers will inspect the vehicle's PCV and replace it if necessary.
5221	An incorrect Positive Crankcase Ventilation (PCV) valve may have been installed on these vehicles. Remedy: Chrysler dealers will inspect the vehicle's PCV and replace it if necessary.
5222	An incorrect Positive Crankcase Ventilation (PCV) valve may have been installed on these vehicles. Remedy: Chrysler dealers will inspect the vehicle's PCV and replace it if necessary.
5223	An incorrect Positive Crankcase Ventilation (PCV) valve may have been installed on these vehicles. Remedy: Chrysler dealers will inspect the vehicle's PCV and replace it if necessary.
5224	The original VECI label on these vehicles indicates an emissions test group name that does not apply to the vehicle's emissions package. Remedy: Chrysler will mail new VECI labels to customers and ask them to apply the label so that it covers the original label as described in the reverse side of the owner letter.
5225	
5226	
5227	The electronic control module (ECM) software for the emissions monitoring system can cause affected vehicles to exceed emissions standards. Remedy: Dealers will inspect and, if necessary, update the ECM software in affected vehicles.
5228	
5229	Some vehicles equipped with 2.0L 4-cylinder supercharged engines may have a condition where the Malfunction Indicator Light (MIL) illuminates and/or there is a lack of engine power. This may be caused by failure of the catalytic converter. Remedy: GM is providing additional coverage for the catalytic converter to 10
5230	Some vehicles equipped with 2.0L 4-cylinder supercharged engines may have a condition where the Malfunction Indicator Light (MIL) illuminates and/or there is a lack of engine power. This may be caused by failure of the catalytic converter. Remedy: GM is providing additional coverage for the catalytic converter to 10
5231	Some vehicles equipped with 2.0L 4-cylinder supercharged engines may have a condition where the Malfunction Indicator Light (MIL) illuminates and/or there is a lack of engine power. This may be caused by failure of the catalytic converter. Remedy: GM is providing additional coverage for the catalytic converter to 10
5232	Some vehicles equipped with 2.0L 4-cylinder supercharged engines may have a condition where the Malfunction Indicator Light (MIL) illuminates and/or there is a lack of engine power. This may be caused by failure of the catalytic converter. Remedy: GM is providing additional coverage for the catalytic converter to 10

When P0116 is set other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership fro repair due to the illumination of the MIL. The ECM will be programmed pursuant to Infiniti TSB ITB09-010 and a correspon
5289	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5290	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5291	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5292	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5293	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5294	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5295	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5296	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5297	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5298	Some vehicles may illuminate the malfunction indicator lamp (MIL) for DTC P02610 (PCM Internal Engine Off Timer Performance) when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the powertrain control module with new software on affected vehicles.
5299	An investigation of warranty parts found that a hole can develop by damage from the spot welding used to connect the heat shield to the catalytic converter. The air enters into the catalytic converter through the hole near the rear O2 sensor which causes a MIL for abnormal A/F sensor or catalytic converter because the r
5300	This engine is equipped with a swirl control valve motor and position sensor in the intake manifold. It was found that the swirl control valve position was slightly shifted from the design specification. As a result the MIL was illuminated by the swirl control valve diagnosis of the OBD II system.Remedy: Owners will seek s
5301	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5302	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5303	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5304	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5305	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5306	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5307	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5308	Some vehicles with Delphi EMS have experienced MIL illumination with a DTC P2135 indicating a Throttle Position Sensor (TPS) 1/2 voltage correlation error. The threshold for diagnosis of an error for the TPS voltage correlation was improperly set in the original programming which could result in the system determining
5309	The exhaust manifold with catalytic converter may experience thermal degradation in the event of prolonged extreme driving conditions. This, in turn, may cause the catalytic converter efficiency to drop and a P0420 DTC code to be set.Remedy: Part quality has been improved with the 2005.5MY running change. Affec
5310	The exhaust manifold with catalytic converter may experience thermal degradation in the event of prolonged extreme driving conditions. This, in turn, may cause the catalytic converter efficiency to drop and a P0420 DTC code to be set.Remedy: Part quality has been improved with the 2005.5MY running change. Affec
5311	The Mass Air Flow Sensor has either a broken or a smudged element. Dust particles collide and break the air flow detecting element. Since the dust particles are of a size that is usually caught by the air cleaner, the cause of dust entry is either that they entered at the time of air cleaner replacement or use of air clean
5312	Some vehicles with 2.7L engines have experienced a MIL illumination with a DTC P2A00 and P2A03 indicating an oxygen sensor malfunction which is in error. The main cause is improper exhaust gas modeling in the PCU. Comparing with actual temperature the modeling temperature is too high after initial cold start, th
5313	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5314	Customer complaints of difficulty filling fuel tank, fuel smell, rough running and Malfunction Indicator Lamp (MIL) illumination may be related to the fuel tank roll over valve. Fuel may enter the Evaporative Emissions System (EVAP) through a poor sealing condition of the roll-over valve. The fuel will migrate to the charc
5315	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5316	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5317	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5318	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5319	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5320	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5321	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5322	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5323	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5324	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5325	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5326	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5327	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5328	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5329	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5330	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5331	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5332	Some vehicles with Delphi EMS have experienced MIL illumination with DTC P2135 indicating a throttle position 1/2 voltage correlation error. In certain driving conditions this fault code may be set when no component or emission malfunction exists.Remedy: To correct this problem Kia will reprogram the affected PCM to
5333	Some vehicles equipped with 3.3/3.8L engines have experienced a bumping symptom during engagement of the damper clutch (torque converter lock-up clutch) and a bucking symptom when the damper clutch is fully engaged. The main cause is improper programming of the TCM.Remedy: Kia will publish a TSB to pr
5334	Some vehicles equipped with 3.3/3.8L engines have experienced a bumping symptom during engagement of the damper clutch (torque converter lock-up clutch) and a bucking symptom when the damper clutch is fully engaged. The main cause is improper programming of the TCM.Remedy: Kia will publish a TSB to pr
5335	Some vehicles equipped with 3.3/3.8L engines have experienced a bumping symptom during engagement of the damper clutch (torque converter lock-up clutch) and a bucking symptom when the damper clutch is fully engaged. The main cause is improper programming of the TCM.Remedy: Kia will publish a TSB to pr

This could allow some fuel to escape from the vehicle via the filler neck at the end of refueling.Remedy: Chrysler will conduct Safety Recall (H45) to inspect and, if necessary, replace the fuel tank (with integral fuel fil
5341	The fuel tank filler tube inlet check valve on some vehicles may not fully close at the end of refueling. This could allow some fuel to escape from the vehicle via the filler neck at the end of refueling.Remedy: Chrysler will conduct Safety Recall (H45) to inspect and, if necessary, replace the fuel tank (with integral fuel fil
5342	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5343	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5344	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5345	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5346	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5347	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5348	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5349	The O2 sensor heater circuit in the powertrain control module may take longer than expected to turn off causing the OBD to illuminate the MIL erroneously indicating an O2 sensor heater fault. During metal etching process on the silicone wafer temperature excursions can cause variations in thickness of the metal strips
5350	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5351	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5352	Fuel tank crossover venturi tubes are being replaced because of blockage concerns. These tubes transfer fuel from one side of the fuel tank to the other when one fuel pump fails. Blockage results in lack of proper amounts of fuel resulting in hesitation concerns. Part numbers involved in this concern are 955 620 112 1
5353	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
5354	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.

5357	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5358	Complaints of coolant smell have been pinpointed to small leaks in the heater core part number 997 572 129 00. There is no impact on emissions or drivability and the manufacturer has no follow up plan at this time.
5359	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5360	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5361	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5362	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5363	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
5364	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5365	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5366	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5367	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
5368	Customer complaints of rattling noises from the engine compartment lead technicians to replace the exhaust manifold which includes a catalytic converter. In some instances Diagnostic Trouble Codes of P0430 and P0420 may be stored in the Electronic Control Unit, the majority however did not. Part numbers 996 113 1
5369	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0446, 0451, 0456 and 0455 result in replacement of the fuel tank vent lines which contains the purge valve. Part number 996 110 129 52 is involved in this concern. There is no impact on emissions as vapors will be sent to the intake m
5370	Possible premature replacement of oxygen sensors may be do to technicians replacing the cheaper of two parts associated with certain Diagnostic Trouble Codes. In some cases the catalyst will have to be replaced to eliminate the trouble code. Part numbers 987 606 123 01 or 987 606 124 00 are involved. There is no
5371	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5372	Fuel pressure valves are being replaced based on Diagnostic Trouble Code P0446 which relates to the fuel pressure sensor. The manufacturer considers this a random situation and will continue to monitor the situation. There is no impact on drivability and the impact on emissions is unknown. Part number 996 606 205
5373	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5374	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5375	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5376	Under certain conditions inappropriate calibration causes the deviation of air to fuel ratio compensation factor results in MIL illumination for fuel system.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available fro repair under Running Change/Field Fix #2U and #3N. W
5377	A fault code entry to the DME (engine control unit) control unit (part # 996 618 604 00) is sometimes replaced too early in the process of finding the real problem. Most of them appear not to have a internal fault. Dealership technicians are receiving special training so the DME unit will not be replaced unless a real fau
5378	A fault code entry to the DME (engine control unit) control unit (part # 996 618 604 00) is sometimes replaced too early in the process of finding the real problem. Most of them appear not to have a internal fault. Dealership technicians are receiving special training so the DME unit will not be replaced unless a real fau
5379	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5380	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5381	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5382	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
5383	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5384	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5385	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5386	Malfunction Indicator Lamp (MIL) illumination and vehicle hesitation may be related to faulty spark plugs (part # 999 170 223 90). No information was provided relating to the effect on emissions. The condition is being monitored for follow up. Update 5 adds statement that the majority of the spark plugs are being repl
5387	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
5388	Carbon Canister vent lines are being replaced do to a cracked gasket in the purge valve which is part of the line. Loose rivets or rivets that are out of position may create a condition that causes the gasket to crack. Malfunction Indicator Lamp (MIL) illumination alerts drivers of the concern. An improved part has been m
5389	Malfunction Indicator Lamp (MIL) illumination and numerous fault codes (not reported) have been pinpointed a particular batch of mass air flow (MAF) sensors, part number 955 606 123 00. No emissions, drivability impact or company follow up was reported. Update 1 Dated 12/18/2008 adds model years 2004, 2005, a
5390	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
5391	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, causes Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
5392	Temperature sensor (part #997 606 410 00) is being replaced when the sensor has not been confirmed to be bad. The Engine Control Unit (ECU) uses the instrument clusters time value to calculate/evaluate the engine run time. When the vehicles battery goes dead and the vehicle has to be jump started the clusters ti
5393	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5394	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5395	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
5396	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5397	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5398	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5399	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5400	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5401	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5402	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5403	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5404	Cut-off valves (Part No. 955 605 245 00) are being replaced in the field for having set fault codes PO456/0455 indicating a fault in the evaporative system leak detection pump. The affected parts are being called back from the field for evaluation. Impact on emissions and drivability is yet to be determined. Update 1 d
5405	There is no specific complaint regarding this component (part no. 997 111 217 70 or 997 111 215 70). Metal exhaust seals located between the turbocharger and catalyst are being replaced in the field. This component is a service part which must be replaced anytime the gasket is removed. For many engine service ope
5406	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5407	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5408	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5409	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5410	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5411	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5412	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5413	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5414	Evaporative emissions vent lines that run from the fuel pump to the charcoal canister are being replaced in the field. At this time the manufacturer does not have enough information to determine the reason. If the lines are leaking, some vapor may escape into the atmosphere. If the leak is large enough it can cause
5415	Concerns of the Automatic Transmission Fluid (ATF) sensor not opening at the appropriate time may cause a loss of comfort during shifting. This concern is most noticeable when the outside temperature is low. The ATF sensor, part number 955 307 027 01, will be replaced at the next workshop visit regardless of a cus
5416	Concerns of the Automatic Transmission Fluid (ATF) sensor not opening at the appropriate time may cause a loss of comfort during shifting. This concern is most noticeable when the outside temperature is low. The ATF sensor, part number 955 307 027 01, will be replaced at the next workshop visit regardless of a cus
5417	Concerns of the Automatic Transmission Fluid (ATF) sensor not opening at the appropriate time may cause a loss of comfort during shifting. This concern is most noticeable when the outside temperature is low. The ATF sensor, part number 955 307 027 01, will be replaced at the next workshop visit regardless of a cus
5418	Concerns of the Automatic Transmission Fluid (ATF) sensor not opening at the appropriate time may cause a loss of comfort during shifting. This concern is most noticeable when the outside temperature is low. The ATF sensor, part number 955 307 027 01, will be replaced at the next workshop visit regardless of a cus
5419	Concerns of the Automatic Transmission Fluid (ATF) sensor not opening at the appropriate time may cause a loss of comfort during shifting. This concern is most noticeable when the outside temperature is low. The ATF sensor, part number 955 307 027 01, will be replaced at the next workshop visit regardless of a cus
5420	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
5421	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
5422	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
5423	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
5424	Repairs to the high pressure fuel injection system are being performed based on numerous fault codes. Customer complaints of rough idle and poor acceleration have lead technicians to fuel delivery components. The manufacturer believes these repairs are unwarranted and most likely caused by the pre-delivery (low p

5460	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5461	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5462	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5463	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5464	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5465	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5466	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5467	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5468	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5469	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5470	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5471	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5472	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5473	005, (3) 2006, (1) 2007 and (1) 2008 Engine Family and part number 996 602 104 00. Update 2 adds 1 2009 Engine Family and one part number, 997 602 107 00. Also changes sales volumes for all 2008 E.F.'s.	
5474	extended crank time and adds 2008 model year. Report also states production changes were made in August and September of 2005. Update 2008-17-1 adds (2) 2006 Engine Families and updates sales volumes for 2008 Model Years.	
5475	extended crank time and adds 2008 model year. Report also states production changes were made in August and September of 2005. Update 2008-17-1 adds (2) 2006 Engine Families and updates sales volumes for 2008 Model Years.	
5476	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5477	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5478	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5479	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5480	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5481	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5482	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5483	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5484	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5485	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.	
5486	at this time. Update 2008-29-2 adds (3) 2004, (4) 2005, (1) 2006, (2) 2007 and one 2008 Engine Family. Plus information on the real problem which has to do with vacuum hoses going to the center radiator change over valve. The hoses may be loose or pinched some where between the radiator and the transmission.

The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5632	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5633	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5634	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5635	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5636	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5637	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5638	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5639	The catalytic converter assemblies on certain LX and LC family vehicles include a decoupler (flexible joint) downstream of the catalytic converter substrate. The decoupler is located in the vehicle ground plane (the vehicle height at which the ground would contact the vehicle with the suspension at full jounce without tires)
5640	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5641	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5642	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5643	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5644	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5645	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5646	Some knock sensor connectors might not have been properly plugged in during assembly. A loose connector will set a DTC P0325. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under
5647	Some Throttle Position Sensor/Throttle Actuator assemblies may have been manufactured with contamination which may lead to short circuit. The MIL illuminates.Remedy: Part quality has been improved. When this occurs the vehicle will likely be brought to a dealership and repaired under emissions warranty.
5648	Some Throttle Position Sensor/Throttle Actuator assemblies may have been manufactured with contamination which may lead to short circuit. The MIL illuminates.Remedy: Part quality has been improved. When this occurs the vehicle will likely be brought to a dealership and repaired under emissions warranty.
5649	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5650	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5651	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5652	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5653	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5654	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5655	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5656	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5657	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5658	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5659	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5660	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5661	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5662	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5663	Some secondary heated oxygen sensors have been manufactured with slight cracks which may lead to open circuit of the heater. The MIL illuminates.Remedy: Part quality has been improved. When this defect occurs the vehicle will likely be brought to a dealership and repaired under emission warranty.
5664	Some vehicles may have failed Variable Cam Timing (VCT) solenoids due to lack of lubrication and uneven surface finish of the solenoid's rear bearing.Remedy: A pre-lube of the solenoid's rear bearing was added to the engine assembly process on 2/23/2009. Bearings with improved surface finish were launched in e
5665	Some trucks may have dislocated thermostat bypass valves leading to low engine coolant flow and potential illumination of the MIL. The bypass valve can be pulled down the thermostat body by high pressure coolant flow.Remedy: Improved parts were available in service beginning in October 2006 and in production i
5666	Improper Engine Control Module (ECM) calibration detects a leak in the Evaporative Emissions System when there is no leak. Owners are alerted to this concern by Malfunction Indicator Lamp (MIL) illumination. There is no impact on emissions or drivability pertaining to this defect. Vehicles will be corrected at their next s
5667	Improper Engine Control Module (ECM) calibration may cause a communication error with the Diagnosis Module for Tank Leakage (DMTL). Different run times after engine shutoff may cause the Malfunction Indicator Lamp (MIL) to illuminate and store fault codes for the DMTL. This concern does not impact emissions or
5668	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5669	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5670	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5671	On a small number of vehicles equipped with 3.7L or 4.7L engines the EGR valve actuator coil supporessor diode may fail. The diode failure creates a short circuit to ground resulting in a disabled EGR valve and MIL illumination for P0403 (EGR solenoid circuit). The root cause for the diode damage has not been determ
5672	Catalysts (particulate matter filter) with improper ceramic substrates were in stalled on a small number of vehicles. The vehicles were built from 11-12-2008 through 1-16-2009. An internal analyses discovered the condition, there will be an impact on emissions but will not cause a concern with drivability. Remedy: Volun
5673	Over tightening of the clamps for the front silencer (muffler) may cause forced vibrations of the exhaust system. These vibrations can cause cracking at the exhaust pipes for the rear silencer which will cause exhaust leaks and noises. Remedy: Vehicles will be repaired at the next workshop visit free of charge. Instru
5674	Failure of the engine thermostat, part number 11537502779, can be caused by either mechanical failure or electrical shorts. Owners are alerted to the failure by Malfunction Indicator Lamp (MIL) illumination. The manufacturer believes there will be minimal impact on emissions because MIL illumination will prompt the o
5675	Thermostat failure is being attributed to certain frequencies caused by constant speed driving. Coolant can seep into the wax element resulting in mechanical damage, seal failure. Technicians are lead to the thermostat based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes (DTC)
5676	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5677	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5678	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5679	On certain vehicles after parking under the hot sun for long periods the Intake Air Temperature sensor may become hot by the radiation through the hood. When started the vehicle may illuminate the MIL.Remedy: Mazda will issue a repair procedure to assist service technicians in diagnosing and correcting this concer
5680	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module. Remedy: The manufacturing process for the FSCM has been
5681	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5682	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5683	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5684	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5685	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5686	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5687	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re

5693	The Fuel System Control Module (FSCM) on certain vehicles may experience a condition in which there is an adhesive separation of Room Temperature Vulcanizing (RTV) seal between the seal and the housing which may allow water to seep into the module.Remedy: The manufacturing process for the FSCM has been re
5694	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5695	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5696	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5697	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5698	The intake air ducts, which are connected to the intermediate resonator in the air intake system of the engine, may separate from the resonator with engine movement. This separation occurs due to the premature aging of the material used in the intake air ducts which causes excessive shrinking. The aging/shrinking
5699	A change in the Engine Control Module (ECM) 038 906 016 H, 038 906 016 Q and 038 906 016 AG software is being initiated to improve emissions durability on manual transmission vehicle only. There was no change during vehicle production but the software upgrade is available for service. Remedy: A Voluntary Emis
5700	A change in the Engine Control Module (ECM) 038 906 016 H, 038 906 016 Q and 038 906 016 AG software is being initiated to improve emissions durability on manual transmission vehicle only. There was no change during vehicle production but the software upgrade is available for service. Remedy: A Voluntary Emis
5701	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
5702	Complaints of Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Code (DTC) P0299 lead technicians to replace the Turbocharger Re-circulation Valve. Production part number 06F 145 710 C is being replaced by part 06F 145 710 G. Analysis of returned parts determined the membranes had cracked.
5703	Complaints of Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Code (DTC) P0299 lead technicians to replace the Turbocharger Re-circulation Valve. Production part number 06F 145 710 C is being replaced by part 06F 145 710 G. Analysis of returned parts determined the membranes had cracked.
5704	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
5705	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5706	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5707	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5708	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5709	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5710	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5711	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5712	In cold ambient conditions a static electric charge can build up in the Clean Air Duct and discharge to the throttle plat in the Throttle Body. This electrostatic discharge may cause the onboard diagnostics system to set a fault for either P0123 (Throttle Position Sensor 1 Circuit High) or P0222 (Throttle Position Sensor 2 C
5713	Electrical noise on the Camshaft Position Sensor circuit can cause the Application Specific Integrated Circuit (ASIC) that monitors Crankshaft and Camshaft Position Sensor output to momentarily lose synchronization and set a fault for either P0340 (Camshaft Position Sensor Circuit) or P0344 (Camshaft Position Sensor C
5714	Electrical noise on the Camshaft Position Sensor circuit can cause the Application Specific Integrated Circuit (ASIC) that monitors Crankshaft and Camshaft Position Sensor output to momentarily lose synchronization and set a fault for either P0340 (Camshaft Position Sensor Circuit) or P0344 (Camshaft Position Sensor C
5715	Malfunction Indicator Lamp (MIL) on with Diagnostic Trouble Code (DTC) P0706 (transmission range sensor circuit performance) is related to the Transmission Control Module (TCM). This concern only involves the Continuously Variable Transmission (CVT). Other symptoms associated with this failure are shifter display f
5716	The DTC P0116 code is being set by an incorrect program in the ECM. When P0116 is set other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership fro repair due to the illumination of the MIL. The ECM will be programmed pursuant to Infniti TSB ITB09-010 and a correspon
5717	The DTC P0116 code is being set by an incorrect program in the ECM. When P0116 is set other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership fro repair due to the illumination of the MIL. The ECM will be programmed pursuant to Infniti TSB ITB09-010 and a correspon
5718	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5719	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5720	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5721	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5722	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5723	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5724	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5725	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5726	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5727	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5728	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5729	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5730	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5731	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5732	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5733	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5734	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5735	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5736	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5737	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
5738	The P0128 DTC code for thermostat function is being sent on a small number of 2007MY 2.5L Altima and 2.0L Sentra vehicles. This DTC is being set by an incorrect program in the ECM.Remedy: Affeccted vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be reprog
5739	The P0128 DTC code for thermostat function is being sent on a small number of 2007MY 2.5L Altima and 2.0L Sentra vehicles. This DTC is being set by an incorrect program in the ECM.Remedy: Affeccted vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be reprog
5740	The P0128 DTC code for thermostat function is being sent on a small number of 2007MY 2.5L Altima and 2.0L Sentra vehicles. This DTC is being set by an incorrect program in the ECM.Remedy: Affeccted vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be reprog
5741	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5742	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5743	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5744	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5745	The P0463 DTC code for fuel level sensor circuit high input is being set on a number of 2008MY and 2009MY vehicles. This DTC is being set by an incorrect program in the ECM. When the P0463 DTC sets other OBD monitors may not complete.Remedy: Affected vehicles will likely be brought to a dealership for repair d
5746	Some 2004 and 2005 Model Year Nissans have exhaust manifold problems. The exhaust manifold develops slight cracks due to stress caused by the exhaust temperature. Nissan improved the exhaust manifold by adding a reinforcement rib to the area where the crack occurred.
5747	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5748	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5749	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5750	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5751	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5752	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5753	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5754	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5755	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5756	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5757	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
5758	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5759	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5760	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5761	The 2007-09MY Versa may experience longer than normal crank times due to a slowed ability to build up fuel pressure.Remedy: Affected vehicles will likely be brought to a dealership for repair. The fuel pressure regulator is being replaced under warranty pursuant to a Nissan TSB.
5762	The P0133 DTC for A/F sensor circuit is being set on the 2008MY Altima Hybrid. This DTC is being set due to a programming issue with the ECM. When the P0133 DTC sets other OBD monitors may not complete. Also the internal parts ordering system may have allowed the dealer to replace the A/F sensor in the 2008
5763	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5764	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5765	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5766	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5767	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5768	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18

	P
5769	On some vehicles the OBD calibrations for the Evap Pressure Switch Stuck Closed and/or Low/Reverse Pressure Switch Rationality (2.4L engines only) diagnostics are overly sensitive and may cause MIL illumination for DTCs P0452 and/or P0841, respectively, when no problem exists.Remedy: Chrysler has issued TSB 18
5770	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the valv
5771	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the valv
5772	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the valv
5773	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the valv
5774	Some vehicles may illuminate the MIL for P0404 (EGR Position Sensor Performance) when no problem exists. The diagnostics could false fail if the change commanded in EGR position was greater than the valve could physically move in the time allowed by the monitor before an error was detected, even though the valv
5775	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5776	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5777	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5778	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5779	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5780	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5781	Excessive load can be applied to the #5 thrust bearing in a 62TE transmission during torque converter unlock while in 6th gear. Loads causing deformation of the bearing can result in the OBD setting faults for P0731 through P0735 or P1736 (Incorrect Gear Ratio in 1st through 6th gears) or for P0868 (Low Line Pressure
5782	Harsh engine vibration (such as trailer towing) can cause movement of the wiring harness connector at the Short Runner Valve (SRV) resulting in loss of the tin plating from the terminals. If enough plating is lost from either the SRV or the harness terminals a fault can be detected for either P1004 (Short Runner Valve C
5783	Harsh engine vibration (such as trailer towing) can cause movement of the wiring harness connector at the Short Runner Valve (SRV) resulting in loss of the tin plating from the terminals. If enough plating is lost from either the SRV or the harness terminals a fault can be detected for either P1004 (Short Runner Valve C
5784	Harsh engine vibration (such as trailer towing) can cause movement of the wiring harness connector at the Short Runner Valve (SRV) resulting in loss of the tin plating from the terminals. If enough plating is lost from either the SRV or the harness terminals a fault can be detected for either P1004 (Short Runner Valve C
5785	Harsh engine vibration (such as trailer towing) can cause movement of the wiring harness connector at the Short Runner Valve (SRV) resulting in loss of the tin plating from the terminals. If enough plating is lost from either the SRV or the harness terminals a fault can be detected for either P1004 (Short Runner Valve C
5786	The component that failed is the generator battery control module. The generator battery control module, also referred to as the battery disconnect unit or battery energy control module, is a serviceable device which is mounted to the rear of the hybrid generator battery carrier assembly. This controller also includes sev
5787	The emission-related component is the fuel tank fill pipe. On some vehicles there may be an inadequate sealing of the surface of the fuel tank fill pipe. The probable cause is inadequate manufacturing process control on the quality of the sealing surface of the pipe.Remedy: An interim production change was made
5788	In some vehicles the two mode hybrid battery pack control module can have a calculated State Of Charge (SOC) error (drift) from the true SOC. Once the SOC error is significant enough a high discharge event such as an auto start from stop may reduce the battery charge due to the point that P061B (Control Module T
5789	In some vehicles the two mode hybrid battery pack control module can have a calculated State Of Charge (SOC) error (drift) from the true SOC. Once the SOC error is significant enough a high discharge event such as an auto start from stop may reduce the battery charge due to the point that P061B (Control Module T
5790	Improper communication between the On-Board Diagnostic System (OBD) tester and the Engine Control Module (ECU) was discovered during routine production tests. The Production Vehicle Evaluation test is required by the California Air Resources Board. The failure is related to the monitoring of the rear oxygen sensor
5791	Owner complaints of Malfunction Indicator Lamp (MIL) illumination associated with Mass Air Flow (MAF) related trouble codes lead to the replacement of the MAF. Part number 11721438814 made by Fa. Continental was changed by using a different ceramic paste. It is believed this paste is the cause of the MAF failures.
5792	Owner complaints of Malfunction Indicator Lamp (MIL) illumination associated with Mass Air Flow (MAF) related trouble codes lead to the replacement of the MAF. Part number 11721438814 made by Fa. Continental was changed by using a different ceramic paste. It is believed this paste is the cause of the MAF failures.
5793	Some vehicles may have evaporative leaks at the fuel tank filler spud due to inconsistencies in the fuel tank molding process. The fuel tank supplier's apparent lack of adherence to standard process control techniques may have allowed application of excess pressure while the fuel filler spud was welded to the tank, po
5794	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
5795	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
5796	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
5797	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
5798	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
5799	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
5800	The OBD system can sometimes misjudge an Engine Off Natural Vacuum leak check as a stuck open purge valve if the engine is started while the monitor is running and fuel tank vapor pressure is high. The evaporative emission vent control valve is not sealing properly during the EONV OBD-II test. The OBD system
5801	The P1421 DTC for Intake Air Low Pressure Switch Circuit High Voltage is being set on some 2009MY vehicles. This DTC is being set by programming irregularity in the ECM.Remedy: A Nissan TSB has been created and distributed for this issue that instructs the dealers to reprogram the ECM.
5802	The P1421 DTC for Intake Air Low Pressure Switch Circuit High Voltage is being set on some 2009MY vehicles. This DTC is being set by programming irregularity in the ECM.Remedy: A Nissan TSB has been created and distributed for this issue that instructs the dealers to reprogram the ECM.
5803	The P1421 DTC for Intake Air Low Pressure Switch Circuit High Voltage is being set on some 2009MY vehicles. This DTC is being set by programming irregularity in the ECM.Remedy: A Nissan TSB has been created and distributed for this issue that instructs the dealers to reprogram the ECM.
5804	A certain ECM calibration may have been used in the production of a limited number of vehicles leading to a potential P0133 and/or P0153 DTC circuit slow response.Remedy: Nissan and Infiniti TSBs have been issued that instruct dealers to reprogram the ECM.
5805	A certain ECM calibration may have been used in the production of a limited number of vehicles leading to a potential P0133 and/or P0153 DTC circuit slow response.Remedy: Nissan and Infiniti TSBs have been issued that instruct dealers to reprogram the ECM.

Such contamination may be generated from a press-fit joining process that is used in manufacturing the injectors.Remedy: Improvements to the fuel injector manufacturing process to eli
5833	Oxygen sensors, (Part Nos. 94860612902, 94860612802) are being replaced in the field for setting diverse fault codes. A pattern has not yet emerged as to a specific root cause. Update 1 states: A production change was made February, 18 2004 by the supplier and reports of replacements are tapering off. But yet this
5834	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
5835	There is the possibility that the signal of the Air Mass Sensor (Part No. 986 606 125 01) appears intermittently not plausible. The On-Board Diagnosis (OBD) System detects this and illuminates the Malfunction Indicator Lamp (MIL). Depending on the length of time the signal is not plausible there might be a slight impa
5836	The evaporative system's check valves (Part No. 955 605 517 00) have been replaced on the Cayenne V6 models due to a Malfunction Indicator Lamp (MIL) on condition. The check valve contains a purge valve which may have contained rivets that were out of tolerance causing the gasket within to crack. Check valves w
5837	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
5838	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
5839	Concerns of engines being hard to start and Malfunction Indicator Lamp (MIL) illumination may be associated with engine temperature sensor failure. The manufacturer has no follow up plans at this time. Part numbers involved are 955 106 125 00 and 955 106 125 01. Update 1 adds 2009 Engine Family and updates s
5840	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
5841	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
5842	Rough running engine and Malfunction Indicator Lamp (MIL) illumination have been linked to ignition coil failure. The involved coil, part number 997 602 104 00, has an integrated plug connector. No manufacturer follow up is planned at this time because they feel these are random cases.Update 1 adds (4) 2004, (5) 2
5843	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P044 may be caused by a concern with fuel tank vent lines. There may also be a hard/no start concern after refueling. The part number involved is 987 110 128 01. The manufacturer is currently monitoring the concern. No information was
5844	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
5845	Speed Sensor 955 606 381 00 is being replaced for concerns of extended cranking time before the engine will start. Emissions is not impacted and there is no drivability concern associated with this failure as the engine does not start as expected. At the time the report was filed this concern is under investigation, no fol
5846	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
5847	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
5848	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
5849	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 604 02. There is no impact on emissions or drivability because the ECU would have to be r
5850	If during vehicle service involving updating the Engine Control Unit (ECU) software, the ECU was bumped or electronically interrupted, the update would fail and the ECU would short out requiring replacement. Part number 955 618 604 02. There is no impact on emissions or drivability because the ECU would have to be r
5851	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
5852	Owner concerns of Malfunction Indicator Lamp (MIL) illumination are related to coolant temperature sensors, part number 997 606 420 00. There also is a potential for cold start issues with a failed part. A production change was made in 2/5/2009. Update 1 adds 1 Engine Family and updates sales volumes.Update 2 Ad
5853	Failure of the Cooling Fan Control Units may cause either engine overheating or the cooling fan will stay on all the time. Engine overheating will set codes in the Engine Control Unit which may turn on the Malfunction Indicator Light (MIL). Part numbers 997 618 436 02 and 997 618 436 91 are involved and have been re

There is no impact on drivability or emis
5876	Owner complaints of rough running and/or Malfunction Indicator Light (MIL) illumination may be related to Oxygen Sensor (O2) failure. This condition may cause numerous fault codes to be stored in the Engine Control Units (ECU) memory. Part number 955 606 128 10, 955 606 128 20, 955 606 136 10 and 955 606 1
5877	Owner complaints of rough running and/or Malfunction Indicator Light (MIL) illumination may be related to Oxygen Sensor (O2) failure. This condition may cause numerous fault codes to be stored in the Engine Control Units (ECU) memory. Part number 955 606 128 10, 955 606 128 20, 955 606 136 10 and 955 606 1
5878	Owner complaints of rough running and/or Malfunction Indicator Light (MIL) illumination may be related to Oxygen Sensor (O2) failure. This condition may cause numerous fault codes to be stored in the Engine Control Units (ECU) memory. Part number 955 606 128 10, 955 606 128 20, 955 606 136 10 and 955 606 1
5879	Exhaust manifolds which include the pre-catalyst are being replaced for owner complaints of rattling noises from the engine compartment. This condition may illuminate the Malfunction Indicator Lamp (MIL) and store numerous related fault codes in the memory of the Engine Control Unit (ECU). Part numbers 987 113 1
5880	Exhaust manifolds which include the pre-catalyst are being replaced for owner complaints of rattling noises from the engine compartment. This condition may illuminate the Malfunction Indicator Lamp (MIL) and store numerous related fault codes in the memory of the Engine Control Unit (ECU). Part numbers 987 113 1
5881	Some vehicles have experienced MIL illumination accompanied by DTC P0111 indicating an intake air temperature circuit malfunction. In certain driving and ambient conditions, the programming "map" of appropriate comparison values may be insufficient. This may be mistaken by the OBD system as a malfunction w
5882	Some vehicles have experienced MIL illumination accompanied by DTC P0111 indicating an intake air temperature circuit malfunction. In certain driving and ambient conditions, the programming "map" of appropriate comparison values may be insufficient. This may be mistaken by the OBD system as a malfunction w
5883	Some vehicles have experienced MIL illumination accompanied by DTC P0111 indicating an intake air temperature circuit malfunction. In certain driving and ambient conditions, the programming "map" of appropriate comparison values may be insufficient. This may be mistaken by the OBD system as a malfunction w
5884	Some vehicles have experienced MIL illumination accompanied by DTC P0111 indicating an intake air temperature circuit malfunction. In certain driving and ambient conditions, the programming "map" of appropriate comparison values may be insufficient. This may be mistaken by the OBD system as a malfunction w
5885	Some vehicles have experienced MIL illumination accompanied by DTC P0111 indicating an intake air temperature circuit malfunction. In certain driving and ambient conditions, the programming "map" of appropriate comparison values may be insufficient. This may be mistaken by the OBD system as a malfunction w
5886	Some vehicles have experienced MIL illumination accompanied by DTC P0111 indicating an intake air temperature circuit malfunction. In certain driving and ambient conditions, the programming "map" of appropriate comparison values may be insufficient. This may be mistaken by the OBD system as a malfunction w
5887	A DTC (P0461, P0462 or P0463) for the Fuel Level Sensor Circuit is being set on some vehicles due to a fuel level sensor float arm that may, under certain circumstances, slightly shift out of position. When one of these codes is set some OBD monitors may not complete. Remedy: Affected vehicles will likely be broug
5888	A DTC (P0461, P0462 or P0463) for the Fuel Level Sensor Circuit is being set on some vehicles due to a fuel level sensor float arm that may, under certain circumstances, slightly shift out of position. When one of these codes is set some OBD monitors may not complete. Remedy: Affected vehicles will likely be broug
5889	The OBD system may falsely detect a malfunction of Drive By Wire (DBW) power source when jump started with a dead battery. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct programming has been applied to tyhe assembly line and is available for repair under
5890	The OBD system may falsely detect a malfunction of Drive By Wire (DBW) power source when jump started with a dead battery. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct programming has been applied to tyhe assembly line and is available for repair under
5891	The OBD system may falsely detect a malfunction of Drive By Wire (DBW) power source when jump started with a dead battery. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct programming has been applied to tyhe assembly line and is available for repair under
5892	The OBD system may falsely detect a malfunction of Drive By Wire (DBW) power source when jump started with a dead battery. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct programming has been applied to tyhe assembly line and is available for repair under
5893	The OBD system may falsely detect a malfunction of Drive By Wire (DBW) power source when jump started with a dead battery. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct programming has been applied to tyhe assembly line and is available for repair under
5894	The OBD system may falsely detect a malfunction of Drive By Wire (DBW) power source when jump started with a dead battery. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct programming has been applied to tyhe assembly line and is available for repair under
5895	The secondary voltage of ignition coil may down due to short circuit which is caused by foreign objects in secondary coil. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership and repaired under emission warranty.
5896	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5897	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5898	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5899	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5900	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5901	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5902	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5903	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5904	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5905	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5906	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5907	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5908	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5909	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5910	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5911	Some PCM may have been manufactured with defective diode which may lead to short circuit. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to a dealership for repair. The PCM will be replaced under emission warranty acco
5912	Some EGR valves may have been manufactured with a misaligned pintle which may result in pintle sticking. The MIL illuminates. Remedy: Part quality has been improved. When this defect occurs, the vehicle will likely be brought to a dealership and repaired under warranty.
5913	Some camshafts may have been manufactured with inappropriate roughness on end flange. This may lead to wear of the thrust cover of the camshaft, and excessive camshaft end play causing the camshaft gear to damage the camshaft position (CMP) sensor. The MIL illuminates. Remedy: Part quality has been im
5914	Some camshafts may have been manufactured with inappropriate roughness on end flange. This may lead to wear of the thrust cover of the camshaft, and excessive camshaft end play causing the camshaft gear to damage the camshaft position (CMP) sensor. The MIL illuminates. Remedy: Part quality has been im
5915	Some camshafts may have been manufactured with inappropriate roughness on end flange. This may lead to wear of the thrust cover of the camshaft, and excessive camshaft end play causing the camshaft gear to damage the camshaft position (CMP) sensor. The MIL illuminates. Remedy: Part quality has been im
5916	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to camshaft replacement. Two conditions were found affecting the camshaft one is the reluctor ring coming loose. The other is the top of a lifter having excessive wear which may cause a miss-fire and noise concern. Part numbers of camshafts
5917	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to camshaft replacement. Two conditions were found affecting the camshaft one is the reluctor ring coming loose. The other is the top of a lifter having excessive wear which may cause a miss-fire and noise concern. Part numbers of camshafts
5918	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to camshaft replacement. Two conditions were found affecting the camshaft one is the reluctor ring coming loose. The other is the top of a lifter having excessive wear which may cause a miss-fire and noise concern. Part numbers of camshafts
5919	Owner complaints of rattling noises have lead to the replacement of catalytic convertors. Review of returned parts have found broken welds at the inlet pipe of the catalyst. Part numbers 997 113 010 80, 997 113 021 91, 997 113 022 91, 997 113 033 02, 997 113 033 05, 997 113 033 06, 997 113 034 02, 997 113 034
5920	Owner complaints of rattling noises have lead to the replacement of catalytic convertors. Review of returned parts have found broken welds at the inlet pipe of the catalyst. Part numbers 997 113 010 80, 997 113 021 91, 997 113 022 91, 997 113 033 02, 997 113 033 05, 997 113 033 06, 997 113 034 02, 997 113 034
5921	Owner complaints of rattling noises have lead to the replacement of catalytic convertors. Review of returned parts have found broken welds at the inlet pipe of the catalyst. Part numbers 997 113 010 80, 997 113 021 91, 997 113 022 91, 997 113 033 02, 997 113 033 05, 997 113 033 06, 997 113 034 02, 997 113 034
5922	Owner complaints of rattling noises have lead to the replacement of catalytic convertors. Review of returned parts have found broken welds at the inlet pipe of the catalyst. Part numbers 997 113 010 80, 997 113 021 91, 997 113 022 91, 997 113 033 02, 997 113 033 05, 997 113 033 06, 997 113 034 02, 997 113 034
5923	Under certain conditions inappropriate calibration causes the deviation of air to fuel ratio compensation factor results in MIL illumination for fuel system.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available fro repair under Running Change/Field Fix #2U and #3N. W
5924	Under certain engine starting conditions the OBD system may falsely detect a malfunction of the misfire. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with an improved calibration is made available for repair under Field Fix#2U. When this defect occurs the vehicle will likely b
5925	A defect in the Air Cleaner housing may allow unfiltered air to enter engine through the intake. The unfiltered air can cause premature wear of internal engine parts, such as the piston rings and cylinder walls. The manufacturer has issued a "Workshop Service Action" (also called a Recall in the repair instructions) to repl
5926	A defect in the Air Cleaner housing may allow unfiltered air to enter engine through the intake. The unfiltered air can cause premature wear of internal engine parts, such as the piston rings and cylinder walls. The manufacturer has issued a "Workshop Service Action" (also called a Recall in the repair instructions) to repl
5927	A defect in the Air Cleaner housing may allow unfiltered air to enter engine through the intake. The unfiltered air can cause premature wear of internal engine parts, such as the piston rings and cylinder walls. The manufacturer has issued a "Workshop Service Action" (also called a Recall in the repair instructions) to repl
5928	Spark plugs have been found to be defective because of loose platinum coating on the ground electrode caused by a flaw in the manufacturing process. Workshop Service Action W728 was issued April 2008 to replace all spark plugs, part number 999 170 122 90, in the vehicles involved. The impact on emissions is unk
5929	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5930	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5931	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5932	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5933	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5934	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5935	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5936	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5937	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
5938	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5939	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5940	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5941	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5942	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5943	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
5944	Catalytic converters are being replaced for complaints of rattling noises, Malfunction Indicator Lamp (MIL) illumination and various fault codes. Part numbers involved are 987 113 111 00, 987 113 111 04, 987 113 111 05, 987 113 112 00, 987 113 112 05, 987 113 113 02, 987 113 113 03, 987 113 114 00 or 987 113
5945	Catalytic converters are being replaced for complaints of rattling noises, Malfunction Indicator Lamp (MIL) illumination and various fault codes. Part numbers involved are 987 113 111 00, 987 113 111 04, 987 113 111 05, 987 113 112 00, 987 113 112 05, 987 113 113 02, 987 113 113 03, 987 113 114 00 or 987 113
5946	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0030, P0130, P3266 and P3255 relate to front oxygen sensor concerns. Part numbers 06F 906 262 AC and 06E 906 265 C are involved, the failure is related to improper crimping of the wires to the inside the sensor. The vendor for this
5947	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5948	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5949	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5950	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
5951	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
5952	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
5953	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns are related to the catalytic converters which are being replaced by part numbers 3C0 254 502 TX, 3C0 254 503 PX and 3C0 254 504 BX. Vehicles ex
5954	Malfunction Indicator Light (MIL) illumination and related Diagnostic Trouble Codes (DTC), P0421 and P0431, lead to the replacement of the Pre-catalysts (warm up). Emission tests performed indicate the vehicle performs within emission standards. Part numbers 4E0 254 501 AX, 4E0 254 501 X, 4FD 254 503 CX, 8E0 2
5955	Owner complaints of Malfunction Indicator Light (MIL) illumination associated with Diagnostic Trouble Code (DTC) P0420 have resulted in catalytic converter replacement. The manufacturer believes the concern was caused by too sensitive of monitoring software. In some cases the converter was replaced because of nois
5956	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5957	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5958	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5959	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5960	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5961	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5962	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5963	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5964	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5965	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o
5966	Camshaft position (CMP) actuator failure causes delayed adjustment of the camshaft. The illumination of the Malfunction Indicator Lamp (MIL) alerts the driver of the failure. Increased contamination of the engine oil can cause scoring of the bearing which causes the failure. The manufacturer reports there is no effect o

Using this calibration the engine control module will underestimate the actual fuel volume used for OBD enablement. OBD intended to enable at actual fuel volumes between 15-85% will be enable
6110	Vehicles equipped with 3.6L engines have been built with the secondary fuel level sender OBD disabled. In the presence of a secondary fuel level sender malfunction the OBD system will not store a DTC or illuminate the MIL. Primary fuel level sender diagnostics operate as intended. Other OBDs that use fuel level as
6111	Vehicles equipped with 3.6L engines have been built with the secondary fuel level sender OBD disabled. In the presence of a secondary fuel level sender malfunction the OBD system will not store a DTC or illuminate the MIL. Primary fuel level sender diagnostics operate as intended. Other OBDs that use fuel level as
6112	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
6113	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
6114	During the transportation from the production plant to the customer, the engine is started frequently for a very short time without ever reaching regular driving conditions. This can cause fouling on the Spark Plug (Part No. 999 170 218 90) and the spark plugs have to be replaced. The problem is obvious to the driver (r
6115	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure. Update 1 dated 9/19/2007 changes sales volume from 2,068 to 1,906 and to include GT2.Update 2 da
6116	A reprogramming error has resulted in an incorrect MIL illumination for DTC P0011. The OBD programming incorrectly causes the MIL to illuminate even though the VTC is functioning properly.Remedy: A TSB has been issued that instructs the dealers on how to perform ten repair which includes reprogramming of the EC
6117	A loose wiring harness connection at the Oxygen sensor, part number 955 606 136 01, would cause Malfunction Indicator Lamp (MIL) illumination. Also numerous fault codes would be stored in the Engine Control Unit (ECU). Production changes were made in mid 2004 which have addressed this problem.
6118	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
6119	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
6120	Fuel tanks are being replaced for complaints of hard refueling, in some cases the anti-spit-back valve was not welded correctly. Fuel tank part numbers 955 201 075 10, 955 201 075 11, 955 201 075 12, 955 201 075 13, and 955 201 075 15 are involved. No drivability or emissions related concerns were provided. A pro
6121	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
6122	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
6123	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
6124	Intake manifold gaskets are being replaced for numerous reasons, not necessarily a defective part. The gasket, part number 996 110 247 50, is replaced anytime the intake manifold is removed. There was no information provided concerning emissions or drivability. The manufacturer has no follow up plan at this time.
6125	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
6126	Temperature sensors, 996 606 410 00, are being replaced do to Malfunction Indicator Lamp (MIL) illumination. No pattern has emerged for the replacements thus the manufacturer considers these to be random replacements. No emissions or drivability concerns were reported and the manufacturer has no follow up plan
6127	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
6128	Malfunction Indicator Lamp (MIL) illumination is alerting owners to failure of the pre-catalyst oxygen sensor part number 997 606 128 02. There is no impact on drivability and the impact on emissions is not known at the time of this report.
6129	Valve housings of the evaporative/ORVR (On-board Refueling Vapor Recovery) system are being replaced for complaints of whistling noises. Part number 996 201 231 01. There is no impact on emissions or drivability and there is no follow up plan at this time.
6130	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
6131	Concerns of the Automatic Transmission Fluid (ATF) sensor not opening at the appropriate time may cause a loss of comfort during shifting. This concern is most noticeable when the outside temperature is low. The ATF sensor, part number 955 307 027 01, will be replaced at the next workshop visit regardless of a cus
6132	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
6133	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis
6134	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis
6135	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis
6136	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis
6137	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis
6138	Concerning the replacement of the secondary air check valve rubber/metal gasket only a small number were related to the failure of the check valve. This gasket is used in numerous applications throughout the vehicle so it is uncertain how big of an emissions related concern it is. There is no impact on drivability. Emis
6139	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
6140	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns may be related to the catalytic converter 1J1 131 701 J which is being replaced by part number 1J1 131 701 JX. 65% of the returned converters te
6141	Improper monitoring of the Direct OZone Reduction performance ratio was discovered during the PVE-J3 test performed at the assembly plant. There have been no customer complaints and the issue does not set the Malfunction Indicator Lamp (MIL). Engine Control Module (ECM) involved are 8P0 907 115 M, 8P0 907 1
6142	Improper monitoring of the Direct OZone Reduction performance ratio was discovered during the PVE-J3 test performed at the assembly plant. There have been no customer complaints and the issue does not set the Malfunction Indicator Lamp (MIL). Engine Control Module (ECM) involved are 8P0 907 115 M, 8P0 907 1
6143	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to Engine Coolant Temperature Sensor (ECT) replacement. Diagnostic Trouble Codes (DTC) P0118, P1290 and P2181 are associated with the failed part 06A 919 501 which is being replaced with part number 06A 919 501 A. Failures have been
6144	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to Engine Coolant Temperature Sensor (ECT) replacement. Diagnostic Trouble Codes (DTC) P0118, P1290 and P2181 are associated with the failed part 06A 919 501 which is being replaced with part number 06A 919 501 A. Failures have been
6145	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Kia will publish a TSB to provide reprogramming information to Kia dealers for this condition.
6146	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Kia will publish a TSB to provide reprogramming information to Kia dealers for this condition.
6147	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Kia will publish a TSB to provide reprogramming information to Kia dealers for this condition.
6148	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Kia will publish a TSB to provide reprogramming information to Kia dealers for this condition.
6149	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Hyundai will publish a TSB to provide reprogramming information to Kia dealers for this condition.
6150	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Hyundai will publish a TSB to provide reprogramming information to Kia dealers for this condition.
6151	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Hyundai will publish a TSB to provide reprogramming information to Kia dealers for this condition.
6152	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed. P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (number 06A 905 097) show that the majority of the complaints were caused by poor cont

The MIL illuminates. Remedy: When this defect occurs the vehicle will likely be brought to a dealership and diagnosed un
6352	Some vehicles may experience MIL illumination and the storage of DTC P0420 (catalyst system efficiency below threshold). Under certain severe driving patterns such as high speed highway/uphill driving and/or accelerating with high engine revolutions the deterioration of the vehicles' catalytic converter can progress be
6353	Some vehicles may experience MIL illumination and the storage of DTC P0420 (catalyst system efficiency below threshold). Under certain severe driving patterns such as high speed highway/uphill driving and/or accelerating with high engine revolutions the deterioration of the vehicles' catalytic converter can progress be
6354	On some vehicles the carbon canister (part # 997 201 221 04) has been replaced due to a minor leak and the setting of the Malfunction Indicator Lamp (MIL). It appears that the carbon canisters in question were damaged in transit from the supplier. An improved method of packaging the carbon canisters has been in
6355	Reports from customers of no start conditions have been determined to be caused by hoses with in the fuel pump splitting. When the hoses split the pump cannot deliver adequate amount of fuel to the engine. Part numbers 996 620 057 90, 996 620 057 91 and 996 620 057 92 are involved. There is no effect on emis
6356	Inaccurate fuel level readings after refueling is caused by the fuel level sensor float contacting fuel pressure pipe inside the fuel tank. Part numbers involved are 966 620 833 02 and 966 620 833 01. Technical Service Bulletin (TSB) #2066 has been issued to dealerships to help technicians resolve the concern. The TSB
6357	Inaccurate fuel level readings after refueling is caused by the fuel level sensor float contacting fuel pressure pipe inside the fuel tank. Part numbers involved are 966 620 833 02 and 966 620 833 01. Technical Service Bulletin (TSB) #2066 has been issued to dealerships to help technicians resolve the concern. The TSB
6358	The O-ring (996 106 801 06) that connects the Y-pipe to the intercooler is replaced every time the exhaust system is taken apart. This report is based on parts sold on warranty claims and not necessarily part failure.
6359	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
6360	The evaporative system leak detection pumps (LDP) (Part No. 997 605 125 01) are being unnecessarily replaced in the field for having fault code P1486 set. This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
6361	Engine oil fill caps are being replaced for concerns of oil leakage. A poor seal or loose fitting oil cap will allow the release of internal engine vapors into the atmosphere. The manufacturer considers these to be random occurrences thus no follow up is planned. Part number involved is 948 107 035 01.
6362	Poor crimping of the heater wire inside the Oxygen sensor causes Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 606 128 30 and 655 606 129 30 are involved in this report. An improved crimping process was introduced at the supplier in December 2007. Update 1 adds two part numbers, 955 606 136
6363	The component that failed is the evaporative canister purge solenoid valve. The typical failures are the valve sticking open or closed position. The probable cause of failures is either improper centering of the armature plate during the component manufacturing assembly process or oil on the armature plate during the
6364	Incorrect fuel gauge reading is linked to the fuel level sensor part number 997 620 831 02 and 997 620 833 00. There is no impact on emissions or drivability with regards to this defect. A production change of this part was made in November 27, 2007.
6365	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
6366	Customer complaints of hesitation, lack of power, hard or no start and Malfunction Indicator Lamp (MIL) illumination are being pinpointed to fuel pumps. Part numbers 997 620 127 00 have been reported. Failed parts are currently being collected and tested to determine the cause of the failures.
6367	Failure of high pressure fuel injectors are causing rough running and Malfunction Indicator Lamp (MIL) illumination. Part numbers 9A1 110 128 10 or 9A1 110 128 00, built with in a specific date range, are being recalled from dealerships per Parts Withdraw Bulletin D39. Drivability and emissions will be impacted during t
6368	On some vehicles equipped with 6.1L engines and a manual transmission the OBD calibrations for the Upstream Oxygen Sensor Slow Response Diagnostics are overly sensitive and may cause malfunction indicator lamp (MIL) illumination for diagnostic trouble codes P0133 or P0153 when no problem exists.Remedy: Ch
6369	Some vehicles equipped with a 3.8L engine and a 42RLE automatic transmission may power up in default mode limiting operation to a single forward gear ratio (2nd). An Electronic Throttle Control (ETC) reset during cranking can cause the transmission relay test to be bypassed and result in the transmission operating
6370	Some vehicles equipped with 2.0L engines may experience excess NOx production due to a fuel adaptation error when it transitions between fuel containing different quantities of ethanol (0-10%). The fuel adaptation system is capable of recognizing different fuel conditions and adapting the fuel/air ratio to address ch
6371	Some vehicles equipped with 2.0L engines may experience excess NOx production due to a fuel adaptation error when it transitions between fuel containing different quantities of ethanol (0-10%). The fuel adaptation system is capable of recognizing different fuel conditions and adapting the fuel/air ratio to address ch
6372	No start, rough running and hesitation complaints from owners have lead to the replacement of fuel pump 996 620 133 00. There were also three complaints of vehicle stalling. A parts withdrawal bulletin was issued to dealers on 8/24/2009 to return all pumps in stock for testing.
6373	No start, rough running and hesitation complaints from owners have lead to the replacement of fuel pump 996 620 133 00. There were also three complaints of vehicle stalling. A parts withdrawal bulletin was issued to dealers on 8/24/2009 to return all pumps in stock for testing.
6374	Diagnostic Trouble Code (DTC) code P2400 stored in the Engine Control Unit (ECU) memory with a low idle concern is considered erroneous. The ECU must be reprogrammed to the latest software to eliminate the concern. There is no information provided on drivability or emissions concerns. A technical service bulletin w
6375	High pressure fuel pumps (955 110 316 00) are being replaced based on rough running or extended crank time to start. The manufacturer believes these pumps are being replaced in conjunction with low pressure pump replacement. A new fuel pump has been introduced as a replacement. Update 1 dated 3/8/2010 ad
6376	High pressure fuel pumps (955 110 316 00) are being replaced based on rough running or extended crank time to start. The manufacturer believes these pumps are being replaced in conjunction with low pressure pump replacement. A new fuel pump has been introduced as a replacement. Update 1 dated 3/8/2010 ad
6377	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6378	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6379	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6380	Based on comments from warranty claims the manufacturer believes hall senders are being replaced as part of the diagnostic process and not due to failure. Part number 955 606 106 00 is involved.
6381	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6382	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6383	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6384	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6385	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.
6386	Malfunction Indicator Lamp (MIL) illumination associated with rough running may be attributed to a poor fitting or sealing oil fill cap. The manufacturer believes the owner is the cause of this condition by either not putting the cap on straight. Or by adding oil while the engine is running which will set the MIL.

6396	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nu
6397	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nu
6398	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nu
6399	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nu
6400	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nu
6401	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nu
6402	Owner complaints of the inability to fill the fuel tank to capacity have lead to replacement of the fuel filler neck. The majority of the replacements have been done in California where a new Enhanced Vapor Recovery fuel pump handle is being used. There is no impact on emissions or drivability with this concern. Part nu
6403	A fault indicating a defect in the fuel tank leakage diagnosis system may be entered in the Engine Control Unit (ECU) memory during engine start up. When the fault is registered in the ECU it may illuminate the Malfunction Indicator Lamp (MIL). A Workshop Campaign was issued to correct the software issue.
6404	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6405	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6406	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6407	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6408	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6409	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6410	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6411	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6412	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6413	Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes P0491 and 0492 lead technicians to replace the Secondary Air Pump. Part numbers 997 605 104 00 and 997 605 104 02 were reported.
6414	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Code (DTC) P2270. Part number involved in this possible defect is 997 606 138 02.
6415	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Code (DTC) P2270. Part number involved in this possible defect is 997 606 138 02.
6416	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6417	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6418	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6419	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6420	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6421	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6422	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6423	Owner complaints of rough running when driving for short distances has been pinpointed to defective high pressure fuel injectors. It has been determined that 186 vehicles in North America will need to have the injectors replaced.
6424	Catalytic Converters are being replace based on Diagnostic Trouble Codes P0421 and 0431. Manufacturer analysis of returned parts shows there was no malfunction and the codes may be related to damaged oxygen sensors. Part numbers of replaced converters are 997 113 109 32, 997 113 109 33, 997 113 110 32 an
6425	Owners complaints of Malfunction Indicator Lamp (MIL) illumination and rattling noises from under the vehicle have been pinpointed to the catalytic converter. The manufacturer believes the rattling noise will lead the owner to go directly to the dealer for repairs. A new part was introduced into production during Calendar
6426	Owners complaints of Malfunction Indicator Lamp (MIL) illumination and rattling noises from under the vehicle have been pinpointed to the catalytic converter. The manufacturer believes the rattling noise will lead the owner to go directly to the dealer for repairs. A new part was introduced into production during Calendar
6427	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6428	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6429	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6430	Some 2005 through 2007 trucks may experience slow fuel fill or early pump shut off conditions due to potentially clogged carbon canister vent tubes. Vehicles operated in particularly muddy and dusty environments can experience this condition.Remedy: Ford introduced an improved canister filter media into productio
6431	The P1138 DTC code for swirl control valve is being set on some vehicles with 1.8L California certified vehicles. This DTC is being set by a programming error that does not recognize linkage wear. Remedy: A TSB is being crated and will be distributed for this issue that instructs dealership technicians to reprogram the
6432	The P1138 DTC code for swirl control valve is being set on some vehicles with 1.8L California certified vehicles. This DTC is being set by a programming error that does not recognize linkage wear. Remedy: A TSB is being crated and will be distributed for this issue that instructs dealership technicians to reprogram the
6433	The P1138 DTC code for swirl control valve is being set on some vehicles with 1.8L California certified vehicles. This DTC is being set by a programming error that does not recognize linkage wear. Remedy: A TSB is being crated and will be distributed for this issue that instructs dealership technicians to reprogram the
6434	Excessive wear of the throttle body (C2C20540 & C2C20541) at the throttle position sensor creates numerous customer concerns. They have experienced rough running, restricted performance and illumination of the Malfunction Indicator Lamp. The manufacturer believes there is no adverse impact on emissions becaus
6435	Some 2010 vehicles equipped with 2.0L engines [PVEZ] have experienced a false MIL illumination with a DTC P0304 set, indicating a cylinder 4 misfire after initial cold start. Under certain cold start conditions the misfire detection system threshold can be improved incorrect and a resultant rough idle condition due to the
6436	Some 2009MY vehicles equipped with 3.3L engines may experience MIL illumination accompanied by DTC P0133 and/or P0153 indicating a slow response malfunction of the front oxygen sensor. During the production process foreign material contamination of some oxygen sensor elements may have occurred. This co
6437	Some 2009MY vehicles equipped with 3.3L engines may experience MIL illumination accompanied by DTC P0133 and/or P0153 indicating a slow response malfunction of the front oxygen sensor. During the production process foreign material contamination of some oxygen sensor elements may have occurred. This co
6438	Some 2009MY vehicles equipped with 3.3L engines may experience MIL illumination accompanied by DTC P0133 and/or P0153 indicating a slow response malfunction of the front oxygen sensor. During the production process foreign material contamination of some oxygen sensor elements may have occurred. This co
6439	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6440	Owner complaints of Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) lead technicians to replace the fuel pressure sensor. DTC's P008B low pressure too high and 310B low fuel pressure out of tolerance. The warranty replacement part number furnished in the report is 06E 9
6441	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6442	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6443	As a result of the review of consumer satisfaction surveys Hyundai has become aware that some Sonata 2.4L vehicles equipped with manual transmissions have experienced engine roughness variation during certain driving conditions. This has occurred at approximately 40~50 mph, 3000 engine RPM and low throttle d
6444	As a result of consumer satisfaction surveys Kia has become aware that some 2010MY Forte's equipped with 2.0L engines have experienced slight shift hesitation or shift delay (2nd-3rd gear shift). This hesitation is not a significant drivability concern but has been noted as a minor dissatisfaction with some customers.
6445	As a result of consumer satisfaction surveys Kia has become aware that some 2010MY Forte's equipped with 2.0L engines have experienced slight shift hesitation or shift delay (2nd-3rd gear shift). This hesitation is not a significant drivability concern but has been noted as a minor dissatisfaction with some customers.
6446	As a result of consumer satisfaction surveys Kia has become aware that some 2010MY Forte's equipped with 2.0L engines have experienced slight shift hesitation or shift delay (2nd-3rd gear shift). This hesitation is not a significant drivability concern but has been noted as a minor dissatisfaction with some customers.
6447	Incorrect "Emissions Tune Up Labels", printed with incorrect Engine Family number, were installed on certain Volkswagen vehicles. Part numbers 3C0 010 704 G and 1K0 010 716 Q were reported. A Required Vehicle Update (RVU) bulletin has been sent to dealers to correct vehicles in stock before the vehicles are sold. S
6448	The P1421 DTC for Intake Air Low Pressure Switch Circuit High Voltage is being set on some vehicles. This DTC is being set due to a programming irregularity in the ECM. Remedy: A Nissan TSB is being created and will be distributed for this issue that instructs the dealers to reprogram the ECM.
6449	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6450	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6451	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6452	Malfunction Indicator Lamp (MIL) illumination associated with numerous Evaporative Emission Leak (EVAP) codes lead technicians to replace the purge valve. Diagnostic Trouble Codes P0456, P0455 and P0442 were provided in the report. These codes depict a range from very small to large EVAP leaks. Analysis of retu
6453	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6454	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6455	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6456	Some vehicles may experience degraded fuel delivery module performance due to a poor electrical connection or damaged wire. These conditions may be caused by an improperly seated, wet or damaged electrical connector or wires damaged during fuel tank installation. Remedy: In September 2007 Ford implement
6457	The P0463 DTC for the fuel level sensor is being set on a number of vehicles. The issue is under investigation and is believed to be due to contamination of the fuel level sensor unit. Remedy: Affected vehicles will likely be brought in for service due to illumination of the MIL. The fuel level sensor unit will be replaced
6458	The P0463 DTC for the fuel level sensor is being set on a number of vehicles. The issue is under investigation and is believed to be due to contamination of the fuel level sensor unit. Remedy: Affected vehicles will likely be brought in for service due to illumination of the MIL. The fuel level sensor unit will be replaced
6459	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6460	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6461	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6462	On some vehicles a wire leading to the canister purge volume control solenoid valve may break, setting DTC P0444 and illuminating the Service Engine Soon light. The root cause is that concentrated stress was generated at the wire connector by vibration specific only to this model. Remedy: Customers are expected t
6463	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6464	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6465	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6466	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6467	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6468	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6469	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6470	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6471	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6472	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6473	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6474	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). 6477	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6478	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6479	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6480	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6481	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6482	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6483	Fuel nozzle shuts off prematurely. Remedy: Improved replacement parts (without filter element) are available for service application.
6484	MIL may illuminate due to melting of the monolith catalyzer. Remedy: No further follow-up action is planned since owners are expected to return their vehicle for service if the condition occurs.
6485	Malfunction Indicator Lamp (MIL) illumination with trouble codes P0118, P0117 and P0116 stored in the Engine Control Units (ECU) memory may be the result of the Engine Coolant Sensor (ECT) failing. Failures are attributed to internal electrical concerns of part number 059 919 501 A. The effect on emissions and dri
6486	On certain 2005 model year E 320 CDI diesel vehicles, the EGR valves have been replaced following customer complaints regarding the vehicle ECU putting the vehicle into a limp home mode. May illuminate the MIL. The company improved the EGR valve design through the reduction in tolerance of the valve stem to li
6487	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6488	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6489	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6490	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6491	An inoperative secondary air pump can be attributed to contaminated contacts of the air pump relay, part number A 002 542 13 19. The driver is alerted to the failure by illumination of the Malfunction Indicator Lamp (MIL). It has been discovered that this contamination is created during production. There is no impact
6492	Incorrect "Emissions Tune Up Labels", printed with incorrect Engine Family number, were installed on certain Volkswagen vehicles. Part number 1K0 010 704 E was installed and 1K0 010 715 is the correct label. A Required Vehicle Update (RVU) bulletin has been sent to dealers to correct vehicles in stock before the vehic
6493	Sone vehicles e/w Siemens EMS, OBD readiness codes are not reset to "INCOMPLETE" after neg. term of battery is disconnected; readiness codes are displayed as "COMPLETE." This is a scan tool display error and Hyundai's assessment is this condition does not affect emission performance or driveability. The ECMs will
6494	Sone vehicles e/w Siemens EMS, OBD readiness codes are not reset to "INCOMPLETE" after neg. term of battery is disconnected; readiness codes are displayed as "COMPLETE." This is a scan tool display error and Hyundai's assessment is this condition does not affect emission performance or driveability. The ECMs will

A MIL will illuminate due to stored DTC codes. A rust inhibitor was implemented into the manufacturing process to prevent rust buildup on the affected p
6500	The torque converter clutch solenoid may be stuck in some Torqshift transmissions due to solenoid hydraulic valve/spool rust buildup during processing and shipping. A MIL will illuminate due to stored DTC codes. A rust inhibitor was implemented into the manufacturing process to prevent rust buildup on the affected p
6501	Under certain engine starting conditions the OBD system may falsely detect a malfunction of the misfire. The cause of the failure is inappropriate calibration of the PCM. Remedy: A PCM with an improved calibration is made available for repair under Field Fix #4L. When this defect occurs the MIL illuminates the vehic
6502	A number of vehicles were produced with a transmission speed sensor wire that in some cases is too long and can contact the outer CV boot clamp. In some instances, this can lead to interruption of the speed sensor signal, sending the vehicle into 'limp-in' mode. Remedy: Rapid Response Transmittal 09-038 was iss
6503	On some vehicles the Camshaft Position Sensor (CMPS) may be susceptible to a higher that typical electrical noise level on the 5v supply line, fail one of the OBD tests for Camshaft Position Sensor Circuit *P0365, P0367, P0368 or P0369), illuminate the MIL, and flash the Electronic Throttle Control (ETC) lamp. Remed
6504	A failed o-ring in the high pressure fuel pump may cause drivability and excessive emissions concerns. Part number 13537537320 and 13517585655 are stated in the report. When the o-ring starts to allow leakage the vehicle will loose power and responsiveness. As the o-ring deteriorates the vehicle will go into limp ho
6505	Owners are alerted to a malfunction of the Mass Air Flow Sensor (part number 07D 906 461) by illumination of the Malfunction Indicator Lamp (MIL). Diagnostic Trouble codes P2190 and P2180 are recorded in the Engine Control Units memory. It has been determined the wiring harness connector, for the sensor, is too
6506	Malfunction Indicator Lamp Illumination (MIL) in association with stored Diagnostic Trouble Code P 0455 lead to the replacement of the purge valve assembly. It has been determined that the valve, part number 3W0 133 986 N, is stuck open by carbon particles from the charcoal canister. The particles escape because o
6507	Malfunction Indicator Lamp Illumination (MIL) in association with stored Diagnostic Trouble Code P 0455 lead to the replacement of the purge valve assembly. It has been determined that the valve, part number 3W0 133 986 N, is stuck open by carbon particles from the charcoal canister. The particles escape because o
6508	Malfunction Indicator Lamp Illumination (MIL) in association with stored Diagnostic Trouble Code P 0455 lead to the replacement of the purge valve assembly. It has been determined that the valve, part number 3W0 133 986 N, is stuck open by carbon particles from the charcoal canister. The particles escape because o
6509	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0030 Oxygen (O2) Sensor Heater Control Circuit Bank 1 - Sensor 1 and P0130 Oxygen Sensor Circuit Bank 1 - Sensor/ Malfunction may be caused by concerns with front O2 Sensor and wiring harness. O2 sensor part numbers 06A 906 2
6510	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Code (DTC) P0030 Oxygen (O2) Sensor Heater Control Circuit Bank 1 - Sensor 1 and P0130 Oxygen Sensor Circuit Bank 1 - Sensor/ Malfunction may be caused by concerns with front O2 Sensor and wiring harness. O2 sensor part numbers 06A 906 2
6511	Heater interruption of the Bank One Front Oxygen Sensor (O2 Sensor) will cause Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Code (DTC) P2629 will be stored in the Engine Control Module (ECM). Part numbers 022 906 262 CG/CH (production) and 1K0 998 262 K/N (service) were reported, part num
6512	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6513	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6514	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6515	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6516	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6517	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6518	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6519	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6520	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6521	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6522	Due to a programming error for the evaporative monitoring system the readiness status code may incorrectly indicate that the evaporative monitoring status is complete even though it has not been fully completed. The actual evap monitoring function works as designed and the confirmed code will be stored (MIL will b
6523	Heater interruption of the Bank One Front Oxygen Sensor (O2 Sensor) will cause Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Code (DTC) P2629 will be stored in the Engine Control Module (ECM). Part numbers 022 906 262 CG/CH (production) and 1K0 998 262 K/N (service) were reported, part num
6524	In both primary under hood catalysts and secondary under floor catalysts the monolith material may not remain sufficiently fixed in place within their shell. Over time, the monoliths could be destroyed by vibration and internal movement during vehicle operation. This will result in a rattling noise from under the vehicle y
6525	In both primary under hood catalysts and secondary under floor catalysts the monolith material may not remain sufficiently fixed in place within their shell. Over time, the monoliths could be destroyed by vibration and internal movement during vehicle operation. This will result in a rattling noise from under the vehicle y
6526	In both primary under hood catalysts and secondary under floor catalysts the monolith material may not remain sufficiently fixed in place within their shell. Over time, the monoliths could be destroyed by vibration and internal movement during vehicle operation. This will result in a rattling noise from under the vehicle y
6527	In both primary under hood catalysts and secondary under floor catalysts the monolith material may not remain sufficiently fixed in place within their shell. Over time, the monoliths could be destroyed by vibration and internal movement during vehicle operation. This will result in a rattling noise from under the vehicle y
6528	In both primary under hood catalysts and secondary under floor catalysts the monolith material may not remain sufficiently fixed in place within their shell. Over time, the monoliths could be destroyed by vibration and internal movement during vehicle operation. This will result in a rattling noise from under the vehicle y
6529	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6530	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6531	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6532	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6533	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6534	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6535	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6536	Some Accelerator Pedal Position Sensor connectors may lose connection due to weak locking tabs. This may lead to low power or intermittent hesitation conditions. The MIL illuminates.Remedy: Part assembly process has been improved. When this defect occurs, the MIL illuminates, the vehicle will likely be brought to
6537	Fluctuations in engine speed under idle, and near idle conditions. There were no Malfunction Indicator Lamp (MIL) illumination or Diagnostic Trouble codes (DTC) resulting from this customer complaint. Bentley Motors considers the described idle fluctuation to be strictly a customer satisfaction related issue. The Engine
6538	Some vehicles have experienced rough engine idling during the initial cold start-up period. To improve this condition Hyundai has refined the engine control module program to more properly regulate the fuel injection control during the subject condition.Remedy: Hyundai will publish a TSB to provide repair information
6539	Some vehicles equipped with 1.6L engines have experienced a MIL-on as a result of a knock sensor malfunction (codes: P0325/P0326/P0327/P0328). The main cause of this condition is a corrosion of inner part due to lack of drying time in the manufacturing process. The internal corrosion may result in an intermitten
6540	Some vehicles with automatic transmission may experience a downshift bump at 2nd or 3rd gear when decelerating to a stop. This downshift bump does not appreciably affect either vehicle emission control or drivability but is a discernable factor in relation to smoothness of operation. This matter has been noticed in a
6541	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code
6542	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code
6543	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code
6544	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6545	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m

Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6595	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6596	Oxygen Sensors (O2 sensor) used during productions months June, July, and part of August, 2007 had been damaged by moisture contamination. The damaged stock, part number C2S38497, has been cleared from use and vehicles are being repaired with more recent stock. Owners are alerted of the O2 sensor failure
6597	Certain vehicles were built with a fuel storage venting system that is too restrictive to allow the evaporative emissions OBD to reliably defect small leaks in the fuel cap and fill pipe area. The evaporative emissions system diagnostic will detect large leaks such as those created when the fuel cap has been left off. Reme
6598	Certain vehicles were built with a fuel storage venting system that is too restrictive to allow the evaporative emissions OBD to reliably defect small leaks in the fuel cap and fill pipe area. The evaporative emissions system diagnostic will detect large leaks such as those created when the fuel cap has been left off. Reme
6599	An incorrect emission test group is referenced on the VECI labels for certain vehicles equipped with 2.8L turbo engines. The correct test group should have been AGMXJ02.8161 instead of AGMXT02.8161, which was used until January 27, 2010. Remedy: There will be a Voluntary Emission Recall conducted on the affecte
6600	AN OBD DTC for misfire (P0300-P0304) is setting on some vehicles. The root cause is believed to be due to the unique operating characteristics of an HEV with a higher frequency of engine starts and stops which may result in carbon deposits on the exhaust valves and/or exhaust ports. An investigation is continuing.
6601	AN OBD DTC for misfire (P0300-P0304) is setting on some vehicles. The root cause is believed to be due to the unique operating characteristics of an HEV with a higher frequency of engine starts and stops which may result in carbon deposits on the exhaust valves and/or exhaust ports. An investigation is continuing.
6602	AN OBD DTC for misfire (P0300-P0304) is setting on some vehicles. The root cause is believed to be due to the unique operating characteristics of an HEV with a higher frequency of engine starts and stops which may result in carbon deposits on the exhaust valves and/or exhaust ports. An investigation is continuing.
6603	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6604	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6605	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6606	The P0128 DTC for thermostat function is being set on some 2.5L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to MIL illumination. The ECM will be reprogrammed pursuant to a Niss
6607	A small number of vehicles have experienced a hesitation, stumble or engine stop at idle. Remedy: Affected vehicles will likely be brought in to the dealership for service due to the drivability issue. The ECM will be reprogrammed pursuant to a TSB which has been developed.
6608	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6609	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6610	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6611	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6612	The P0455 DTC for evaporative emissions gross leak is being set on some 1.8L vehicles. This DTC is believed to be set by an incorrect program in the ECM. It is under further investigation. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. The ECM will be re
6613	The P1421 DTC for Intake Air Low Pressure Switch Circuit High Voltage is being set on some vehicles. This DTC is caused by a programming irregularity in the ECM. Remedy: Under investigation. 7/22/10: Owners will return vehicles for service due to MIL illumination. The ECM will be reprogrammed under warranty pu
6614	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to Engine Coolant Temperature Sensor (ECT) replacement. Diagnostic Trouble Codes (DTC) P0118, P1290 and P2181 are associated with the failed part 06A 919 501 which is being replaced with part number 06A 919 501 A. Failures have been
6615	Under certain engine starting conditions the OBD system may falsely detect a malfunction of the misfire. The cause of the failure is inappropriate calibration of the PCM. Remedy: A PCM with an improved calibration is made available for repair under Field Fix #4L. When this defect occurs the MIL illuminates the vehicl
6616	Malfunction Indicator Lamp (MIL) illumination with Diagnostic Trouble Codes (DTC) P0030, P0130, P3266 and P3255 relate to front oxygen sensor concerns. Part numbers 06F 906 262 AC and 06E 906 265 C are involved, the failure is related to improper crimping of the wires to the inside the sensor. The vendor for this
6617	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
6618	Broken needle valves inside the high pressure fuel pump (06H 127 025 K) may create a low fuel pressure condition. This condition will illuminate the Malfunction Indicator Lamp (MIL) and log Diagnostic Trouble Code (DTC) P0087 in the vehicles Engine Control Module (ECM). The manufacturer does not intend on perforr
6619	Broken needle valves inside the high pressure fuel pump (06H 127 025 K) may create a low fuel pressure condition. This condition will illuminate the Malfunction Indicator Lamp (MIL) and log Diagnostic Trouble Code (DTC) P0087 in the vehicles Engine Control Module (ECM). The manufacturer does not intend on perforr
6620	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6621	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6622	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6623	Some vehicles have experienced malfunction indicator light (MIL) illumination accompanied by DTC P0451 indicating Evap Emission System Pressure Sensor Malfunction. In certain driving conditions it is possible that the evaporative system test may be performed at an improper time. This may result in the fault code b
6624	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6625	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6626	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6627	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6628	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6629	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6630	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6631	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6632	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6633	Some vehicles may experience a MIL illumination and operation in a reduced power "limp home" mode. In a new engine (i.e. before it is "broken in") and in a cold condition, the engine will not be capable of producing the appropriate engine torque for certain driving conditions. This is improperly diagnosed as an eng
6634	As a result of a condition in the manufacturing process of the ECM vehicles equipped with an automatic transaxle may exhibit harshness in shifting operations during acceleration. REMEDY: TSB TC002-06 has been issued to replace the Engine Control Module (ECM) of affected in-use vehicles. All owners will be notified
6635	As a result of a condition in the manufacturing process of the ECM vehicles equipped with an automatic transaxle may exhibit harshness in shifting operations during acceleration. REMEDY: TSB TC002-06 has been issued to replace the Engine Control Module (ECM) of affected in-use vehicles. All owners will be notified
6636	As a result of a condition in the manufacturing process of the ECM vehicles equipped with an automatic transaxle may exhibit harshness in shifting operations during acceleration. REMEDY: TSB TC002-06 has been issued to replace the Engine Control Module (ECM) of affected in-use vehicles. All owners will be notified
6637	Rough or uneven engine running together with Malfunction Indicator Lamp (MIL) illumination has lead technicians to replace the Mass Air Flow Sensor (PHF000140). The manufacturer believes that the majority of sensors had been replaced due to misdiagnosis. The number of sensors being replaced was greatly reduced
6638	Rough or uneven engine running together with Malfunction Indicator Lamp (MIL) illumination has lead technicians to replace the Mass Air Flow Sensor (PHF000140). The manufacturer believes that the majority of sensors had been replaced due to misdiagnosis. The number of sensors being replaced was greatly reduced
6639	Numerous Diagnostic Trouble Codes (DTC) and illumination of the Malfunction Indicator Lamp (MIL) have lead to the replacement of the rear Oxygen Sensor (O2). It was discovered that this defect was a software issue of the Engine Control Unit programming. For the short term a more robust diagnostic software was im
6640	Under hood catalyst cans may develop cracks along the weld seams between the inlet funnel and the can body. This is due to tolerance deviations during the welding process. Engine noise is increased, and Malfunction Indicator Lamp (MIL) may illuminate if condition goes unattended for an extended period of time. C
6641	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
6642	The On-Board Diagnosis (OBD) system performs a leak test of the Evaporative Emissions System (EVAP) under certain conditions. Poor sealing fuel filler neck caps, part # 996 201 241 03, fail this test and results in the Malfunction Indicator Lamp (MIL) illuminating. If ignored fuel vapors will be released into the atmosp
6643	The throttle housing (part # 986 605 115 01) is not working to its specifications. The Engine Control Unit (ECU) detects this and in case of serious problems can activate limp mode. Limp home mode allows the vehicle to be driven at limited speeds so the owner may get the vehicle to the dealership for repairs. An impr
6644	On some 3.7L, 3.8L or 4.0L vehicles the Electrically Erasable Programmable Read-Only Memory (EEPROM) memory write is over sensitive and may illuminate the MIL for DTC P16990 (EEPROM memory write denied/invalid) when no problem exists. REMEDY: Chrysler has updated the production software and issued a TS
6645	On some 3.7L, 3.8L or 4.0L vehicles the Electrically Erasable Programmable Read-Only Memory (EEPROM) memory write is over sensitive and may illuminate the MIL for DTC P16990 (EEPROM memory write denied/invalid) when no problem exists. REMEDY: Chrysler has updated the production software and issued a TS
6646	On some 3.7L, 3.8L or 4.0L vehicles the Electrically Erasable Programmable Read-Only Memory (EEPROM) memory write is over sensitive and may illuminate the MIL for DTC P16990 (EEPROM memory write denied/invalid) when no problem exists. REMEDY: Chrysler has updated the production software and issued a TS
6647	Customer complaints of rough running concerns have been traced to numerous problems with the Ignition Coil (Part No. 948 602 104 00). If the ignition coil is not working properly the On-Board Diagnostic (OBD) misfire detection will illuminate the Malfunction Indicator Lamp (MIL). Emissions and drivability will both be
6648	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6649	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6650	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6651	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6652	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6653	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6654	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6655	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6656	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6657	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6658	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6659	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6660	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6661	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6662	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6663	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6664	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6665	Some filler pipes may have been produced with improper dimensions at the thread used for tightening the fuel filler cap. This may increase the tightening torque of the cap or cause a contact between cap and pipe at the thread before full closed position especially when used with a cap on the larger side within its varia
6666	Customers have been experiencing vehicle hesitation issues and / or Malfunction Indicator Lamp (MIL) on. The source of the problem appears to be the high pressure fuel pump, part number 948 110 315 02. It has been determined that the following types of problems are root causes. 1) The steel bellow within the pu
6667	Customers have been experiencing vehicle hesitation issues and / or Malfunction Indicator Lamp (MIL) on. The source of the problem appears to be the high pressure fuel pump, part number 948 110 315 02. It has been determined that the following types of problems are root causes. 1) The steel bellow within the pu
6668	Fuel tanks are being replaced for complaints of hard refueling, in some cases the anti-spit-back valve was not welded correctly. Fuel tank part numbers 955 201 075 10, 955 201 075 11, 955 201 075 12, 955 201 075 13, and 955 201 075 15 are involved. No drivability or emissions related concerns were provided. A pro
6669	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
6670	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
6671	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
6672	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6673	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6674	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6675	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
6676	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
6677	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
6678	Customer complaints of Malfunction Indicator Lamp (MIL) illumination, engine hesitation and noise may be related to the fuel pressure regulator. Regulator 955 620 422 10 is the part involved. This concern is under investigation by the manufacturer. There is no impact on emissions and there is no test data available.
6679	Fuel tank vent valves are being replaced in conjunction with Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0456 and P0442 are stored in the Engine Control Units memory which lead the technician to the vent valve. Part number 955 605 241 00. There is no impact on drivability or emis
6680	Owner complaints of rough running are being corrected by replacement of the fuel injector valve, part numbers 997 605 122 00 and 997 605 123 00. Various Miss-Fire codes are stored in the Engine Control Unit (ECU) when these valves fail. The report did not detail any emissions impact. The manufacturer will continue
6681	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6682	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6683	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6684	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6685	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6686	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6687	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6688	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6689	Some vehicles with 3.8L engines have experienced malfunction indicator light (MIL) illumination is a result of: In vehicles with engine block heater installed an intake air temperature sensor circuit error may be incorrectly diagnosed by the engine management system after an initial cold start. An error code of P0111 or
6690	The throttle body failures were reported in N-05FIR-8. The powder from sensor's resistance coil mixes with grease from washer and causes increased sensor contact resistance to be an abnormal output of either throttle position sensor 1or 2. After self-diagnosis of the electric throttle control the engine control system sh
6691	It is believed fuel pressure sensors are being replaced as part of the diagnostic process before the high pressure fuel pump is replaced. Update 1 adds 2009 3.4BDI and 2010 4.8SEd Engine Families.Update 2 adds 2009 3.8CDI and 2010 4.8PSD Engine Families.Update 3 adds 2011 Engine Families 3.4BDI, 4.8CSD and
6692	It is believed fuel pressure sensors are being replaced as part of the diagnostic process before the high pressure fuel pump is replaced. Update 1 adds 2009 3.4BDI and 2010 4.8SEd Engine Families.Update 2 adds 2009 3.8CDI and 2010 4.8PSD Engine Families.Update 3 adds 2011 Engine Families 3.4BDI, 4.8CSD and
6693	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6694	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6695	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6696	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6697	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6698	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6699	Some vehicles were built with a modular reservoir assembly (MRA) where the plastic supply or return port may crack when operated in hot weather states. If the supply or return ports crack fuel may leak from that area. The failure mechanism of the cracks has been identified as a creep rupture of the material due to m
6700	High pressure fuel pumps (955 110 316 00) are being replaced based on rough running or extended crank time to start. The manufacturer believes these pumps are being replaced in conjunction with low pressure pump replacement. A new fuel pump has been introduced as a replacement. Update 1 dated 3/8/2010 ad
6701	Fuel Pump Control Units are being replaced based on complaints of extended crank time and/or a rough running engine. Technicians have been instructed to replace the unit if it is an outdated version and the vehicle has either condition. Part numbers involved are 997 618 023 00 and 997 618 023 01.
6702	Fuel Pump Control Units are being replaced based on complaints of extended crank time and/or a rough running engine. Technicians have been instructed to replace the unit if it is an outdated version and the vehicle has either condition. Part numbers involved are 997 618 023 00 and 997 618 023 01.
6703	Double clutch transmission control units are being replaced for two reasons. In some cases the diagnostic tester while being used to reprogram the unit would lock up or crash resulting in the need to replace the unit. At one time it was a required replacement anytime a transmission was replaced, now they can reprogram
6704	Double clutch transmission control units are being replaced for two reasons. In some cases the diagnostic tester while being used to reprogram the unit would lock up or crash resulting in the need to replace the unit. At one time it was a required replacement anytime a transmission was replaced, now they can reprogram
6705	The component that failed is the evaporative canister purge solenoid valve. The typical failures are the valve sticking open or closed position. The probable cause of failures is either improper centering of the armature plate during the component manufacturing assembly process or oil on the armature plate during the
6706	Double clutch transmission control units are being replaced for two reasons. In some cases the diagnostic tester while being used to reprogram the unit would lock up or crash resulting in the need to replace the unit. At one time it was a required replacement anytime a transmission was replaced, now they can reprogram
6707	In some instances the "PDK in limp-home mode" warning light comes on and Diagnostic Trouble Codes (DTC) P1552, P1990 and/or P1991 are stored in the Engine Control Module (DME/ECU). The PDK is the double clutch transmission. In these cases the transmission may get stuck in either neutral or third gear when th
6708	In some instances the "PDK in limp-home mode" warning light comes on and Diagnostic Trouble Codes (DTC) P1552, P1990 and/or P1991 are stored in the Engine Control Module (DME/ECU). The PDK is the double clutch transmission. In these cases the transmission may get stuck in either neutral or third gear when th
6709	Incorrect Engine Control Unit (ECU) software may indicate a faulty thermostat, stuck open, when in fact the thermostat is operating properly. The driver is alerted to a concern by illumination of the Malfunction Indicator Lamp (MIL) and returns vehicle for service. The manufacturer is planning to implement a new calibrat
6710	Some evaporative canister purge valves may have been manufactured out of specification which may lead to purge flow reduction under limited conditions. A "Tighten Fuel Cap" message appears on the Multi Information Display. When this defect occurs, evaporative emission is expected to increase.Remedy: Part qua
6711	Some evaporative canister purge valves may have been manufactured out of specification which may lead to purge flow reduction under limited conditions. A "Tighten Fuel Cap" message appears on the Multi Information Display. When this defect occurs, evaporative emission is expected to increase.Remedy: Part qua

A "Tighten Fuel Cap" message appears on the Multi Information Display. When this defect occurs, evaporative emission is expected to increase.Remedy: Part qua
6713	Some evaporative canister purge valves may have been manufactured out of specification which may lead to purge flow reduction under limited conditions. A "Tighten Fuel Cap" message appears on the Multi Information Display. When this defect occurs, evaporative emission is expected to increase.Remedy: Part qua
6714	Some vehicles equipped with 1.6L engines may experience rough engine idling during the initial cold start which can result in an improper malfunction indicator light (MIL) illumination with a diagnostic trouble code P0300 indicating a random/multiple misfires. The main cause is improper programming of the PCM thresh
6715	The wiring connector of the Downstream Oxygen Sensor (O2 Sensor) may not have been properly affixed during the assembly process. After prolonged vibrations of the vehicle or exhaust the sensor may loose its connection. This will result in an intermittent or no signal to the Engine Control Unit. This condition activate
6716	Improper assembly of Oxygen (O2) sensor 11787836394 which consist of improper crimp-oil, using copper instead of silver as crimp material, and different crimp thickness result in failure of the sensor. This issue was most prevalent during the 2007 Calendar year. There is also a concern with improper diagnostic thresh
6717	Improper assembly of Oxygen (O2) sensor 11787836394 which consist of improper crimp-oil, using copper instead of silver as crimp material, and different crimp thickness result in failure of the sensor. This issue was most prevalent during the 2007 Calendar year. There is also a concern with improper diagnostic thresh
6718	Improper assembly of Oxygen (O2) sensor 11787836394 which consist of improper crimp-oil, using copper instead of silver as crimp material, and different crimp thickness result in failure of the sensor. This issue was most prevalent during the 2007 Calendar year. There is also a concern with improper diagnostic thresh
6719	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns are related to the catalytic converters which are being replaced by part numbers 3C0 254 502 TX, 3C0 254 503 PX and 3C0 254 504 BX. Vehicles ex
6720	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
6721	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
6722	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6723	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6724	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6725	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6726	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6727	Some vehicles with 3.5L and 6F50 transmissions may experience open and/or short circuit conditions in the Output Speed Sensor. These conditions may be due to a lack of robust controls in the sensor supplier's manufacturing process. Remedy: A series of process improvements have been implemented by the senso
6728	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0304). Analysis of sample parts (part number 07K 905 115 A/B/C/D) shows that the majority of the complaints were caused
6729	Numerous drivability and or idling concerns associated with Malfunction Indicator Light (MIL) illumination may be the result of faulty Oxygen Sensors (O2 sensor). The part number involved in this report is C2P8810. There is no adverse impact on emissions if the owner returns the vehicle to a Jaguar dealership once the
6730	Numerous drivability and or idling concerns associated with Malfunction Indicator Light (MIL) illumination may be the result of faulty Oxygen Sensors (O2 sensor). The part number involved in this report is C2P8810. There is no adverse impact on emissions if the owner returns the vehicle to a Jaguar dealership once the
6731	Incorrect On Board Diagnostic (OBDII) calibration results in false detection of Engine Coolant Sensor (ECT) failure. The Malfunction Indicator Light (MIL) will be illuminated and ECT specific fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. Approximately Fifty
6732	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6733	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6734	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6735	Incorrect On Board Diagnostic (OBDII) calibration falsely detects the failure of numerous engine control sensors. The Malfunction Indicator Light (MIL) will be illuminated and numerous fault codes will be stored in the system memory when this occurs. There is no impact on emissions or drivability. A new calibration to co
6736	The induction air temperature sensor may accumulate condensation internally which can sporadically increase the resistance of the sensor. These resistance increases will send false outputs to the Engine Control Unit (ECU) which will illuminate the Malfunction Indicator Lamp (MIL). There is no impact on emissions or driv
6737	The induction air temperature sensor may accumulate condensation internally which can sporadically increase the resistance of the sensor. These resistance increases will send false outputs to the Engine Control Unit (ECU) which will illuminate the Malfunction Indicator Lamp (MIL). There is no impact on emissions or driv
6738	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6739	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6740	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6741	Failure of the rubber seal on thermostat part number PCP500050 will cause a bypass of engine coolant around the thermostat. When coolant bypasses the thermostat it prolongs the warm-up time of the engine. Under this condition the Malfunction Indicator Lamp (MIL) will illuminate and store code P0128 in the Engine
6742	The dampener-fuel line assembly may have a small perforation in the diaphragm of the pulse dampener due to out of specification parts. This may result in a noise noticeable to the customer. In addition to the noise a small amount of fuel may weep from manufacturing holes in the diaphragm housing. Remedy: Cl
6743	The dampener-fuel line assembly may have a small perforation in the diaphragm of the pulse dampener due to out of specification parts. This may result in a noise noticeable to the customer. In addition to the noise a small amount of fuel may weep from manufacturing holes in the diaphragm housing. Remedy: Cl
6744	A DTC code (P0461, P0462, or P0463) for the Fuel Level Sensor Circuit is being set on some vehicles. After further investigation it has been found that the contact fingers might prematurely wear or become damaged not providing adequate contact with the resistance card. Remedy: Affected vehicles will likely be broug
6745	A DTC code (P0461, P0462, or P0463) for the Fuel Level Sensor Circuit is being set on some vehicles. After further investigation it has been found that the contact fingers might prematurely wear or become damaged not providing adequate contact with the resistance card. Remedy: Affected vehicles will likely be broug
6746	Thermostat failure is being attributed to certain frequencies caused by constant speed driving. Coolant can seep into the wax element resulting in mechanical damage, seal failure. Technicians are lead to the thermostat based on Malfunction Indicator Lamp (MIL) illumination and related Diagnostic Trouble Codes (DTC)
6747	Pressure hoses 11367838669 and 11367838670 used in the Variable Cam Timing system may crack because the Teflon used for production becomes brittle with age. There was a limited production period involving this concern, 09/05 to 12/05, the composition of the hose was changed at the beginning of Calendar Yea
6748	Fault code P2262 may be triggered in some vehicles because of failure of the turbocharger variable geometry (VG) mechanism to open or close as commanded by the Engine Control Module (ECM). Investigation shows that excessive soot build up inside turbocharger is most likely the cause of such open or close failures
6749	Fault code P2262 may be triggered in some vehicles because of failure of the turbocharger variable geometry (VG) mechanism to open or close as commanded by the Engine Control Module (ECM). Investigation shows that excessive soot build up inside turbocharger is most likely the cause of such open or close failures
6750	The soot filter on some 2007 Ram 2500/3500 vehicles may fail due to internal cracks from very high regeneration temperatures which result from continued soot loading without adequate regeneration. The design of the engine control module (ECM) calibration prevents the level of temperatures that initiate filter crackin
6751	The soot filter on some 2007 Ram 2500/3500 vehicles may fail due to internal cracks from very high regeneration temperatures which result from continued soot loading without adequate regeneration. The design of the engine control module (ECM) calibration prevents the level of temperatures that initiate filter crackin
6752	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
6753	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
6754	The grease from the connection harness may penetrate and reach to the terminal or element of the Air Fuel ratio sensor causing abnormal output. The MIL illuminates.Remedy: When this defect occurs the vehicle will likely be brought to a dealership for service. The connection harness kit will be installed and the air fu
6755	Under certain driving conditions inappropriate ignition control causes catalyst heat damage. The catalyst oxygen storage capacity is reduced and the MIL illuminates. The cause of the failure is inappropriate calibration of the PCM. Remedy: A PCM with an improved calibration is made available for repair under Field Fi
6756	Under certain driving conditions inappropriate ignition control causes catalyst heat damage. The catalyst oxygen storage capacity is reduced and the MIL illuminates. The cause of the failure is inappropriate calibration of the PCM. Remedy: A PCM with an improved calibration is made available for repair under Field Fi
6757	On some Hybrid Electric Vehicles equipped with 5.7L engines, the OBD system may illuminate the MIL when no problem exists.Remedy: Chrysler has issued a TSB to instruct dealership technicians to reprogram the PCM, Hybrid Control Processor (HCP), TEHCM, and Accessory Power Module (APM) with new software on af
6758	Some mini vans have been built with a manufacturing aid (clip) that can side load the wiring harness connector at the Accelerator Pedal Position Sensor and illuminate the Electronic Throttle Control (ETC) lamp for P2122 (APP Sensor 1 circuit low) or P2127 (APP Sensor 2 circuit low). This condition can only occur if the veh
6759	Some mini vans have been built with a manufacturing aid (clip) that can side load the wiring harness connector at the Accelerator Pedal Position Sensor and illuminate the Electronic Throttle Control (ETC) lamp for P2122 (APP Sensor 1 circuit low) or P2127 (APP Sensor 2 circuit low). This condition can only occur if the veh
6760	Some mini vans may have been built with incorrect terminals in the engine wiring harness and illuminate the MIL for P0300-01, P0303, P0340, P0344, P2302, or P2308. Wiring harnesses built between March 20 and April 17, 2009 may have the incorrect terminals at one or more of the following locations: ignition coil #
6761	Some mini vans may have been built with incorrect terminals in the engine wiring harness and illuminate the MIL for P0300-01, P0303, P0340, P0344, P2302, or P2308. Wiring harnesses built between March 20 and April 17, 2009 may have the incorrect terminals at one or more of the following locations: ignition coil #
6762	Some mini vans may have been built with incorrect terminals in the engine wiring harness and illuminate the MIL for P0300-01, P0303, P0340, P0344, P2302, or P2308. 6689	P0116 may be set. The main cause is improper programming of the PCM threshold for a malfunction. A fuel with a high drivability index may cause rough idling and/or delay in starting. this condition may cause a MIL illumination with an error code or P161B. Remedy: To correct this problem Kia has reprogrammed the PCM to improve operation with high drivability

6913	The Integrated Motor Assist (IMA) may deteriorate and eventually fail before its normal usable life is reached. Frequent stop-and-go driving with A/C use during warm weather speeds up the IMA battery deterioration. Remedy: Dealers will update the IMA battery software to help prevent early IMA battery deterioration.
6914	The Integrated Motor Assist (IMA) may deteriorate and eventually fail before its normal usable life is reached. Frequent stop-and-go driving with A/C use during warm weather speeds up the IMA battery deterioration. Remedy: Dealers will update the IMA battery software to help prevent early IMA battery deterioration.
6915	The Integrated Motor Assist (IMA) may deteriorate and eventually fail before its normal usable life is reached. Frequent stop-and-go driving with A/C use during warm weather speeds up the IMA battery deterioration. Remedy: Dealers will update the IMA battery software to help prevent early IMA battery deterioration.
6943	Vehicles with 4.6L engines may have a condition where the Check Engine light may illuminate, there may be a lack of engine power or may be an underbody noise due to the failure of the catalytic converter. Remedy: Gm is providing owners with additional protection for the catalytic converter assemblies. If this conditi
6944	Vehicles with 4.6L engines may have a condition where the Check Engine light may illuminate, there may be a lack of engine power or may be an underbody noise due to the failure of the catalytic converter. Remedy: Gm is providing owners with additional protection for the catalytic converter assemblies. If this conditi
6945	Vehicles with 4.6L engines may have a condition where the Check Engine light may illuminate, there may be a lack of engine power or may be an underbody noise due to the failure of the catalytic converter. Remedy: Gm is providing owners with additional protection for the catalytic converter assemblies. If this conditi
6946	Some vehicles equipped with either a 2.2L or 2.4L engine may have a condition where the mat within the catalytic converter may erode, causing illumination of the Malfunction Indicator Lamp (MIL). Remedy: Emissions warranty coverage has been extended to 10 years/120,000 miles whichever occurs first.
6948	Some vehicles have been equipped with an improperly functioning On-Board Diagnostics (OBD) system that will most likely illuminate the Malfunction Indicator Light (MIL) when a malfunction doe snot exist. Remedy: Infiniti will reprogram the Engine Control Module (ECM) in these vehicles.
6949	There is a potential problem that could affect the durability of the high-pressure fuel pump. Remedy: BMW will extend the emissions warranty for the high-pressure fuel pump to 10 years or 120,000 miles whichever comes first.Remedy: Recall 10E-A02 was issued 10/26/2010 to replace fuel pumps on the affected veh
6950	There is a potential problem that could affect the durability of the high-pressure fuel pump. Remedy: BMW will extend the emissions warranty for the high-pressure fuel pump to 10 years or 120,000 miles whichever comes first.Remedy: Recall 10E-A02 was issued 10/26/2010 to replace fuel pumps on the affected veh

6799	Some VTEC Oil Pressure Switches may have been manufactured with misalignment between the valve shaft and valve shaft guide which may lead to a sticking. The MIL illuminates for VTEC Oil Pressure Switch Circuit High Voltage. Remedy: Corrected part has been applied to the assembly line and is available for servi
6800	Some VTEC Oil Pressure Switches may have been manufactured with misalignment between the valve shaft and valve shaft guide which may lead to a sticking. The MIL illuminates for VTEC Oil Pressure Switch Circuit High Voltage. Remedy: Corrected part has been applied to the assembly line and is available for servi
6801	Some VTEC Oil Pressure Switches may have been manufactured with misalignment between the valve shaft and valve shaft guide which may lead to a sticking. The MIL illuminates for VTEC Oil Pressure Switch Circuit High Voltage. Remedy: Corrected part has been applied to the assembly line and is available for servi
6802	Some VTEC Oil Pressure Switches may have been manufactured with misalignment between the valve shaft and valve shaft guide which may lead to a sticking. The MIL illuminates for VTEC Oil Pressure Switch Circuit High Voltage. Remedy: Corrected part has been applied to the assembly line and is available for servi
6803	Some VTEC Oil Pressure Switches may have been manufactured with misalignment between the valve shaft and valve shaft guide which may lead to a sticking. The MIL illuminates for VTEC Oil Pressure Switch Circuit High Voltage. Remedy: Corrected part has been applied to the assembly line and is available for servi
6804	Some VTEC Oil Pressure Switches may have been manufactured with misalignment between the valve shaft and valve shaft guide which may lead to a sticking. The MIL illuminates for VTEC Oil Pressure Switch Circuit High Voltage. Remedy: Corrected part has been applied to the assembly line and is available for servi
6805	Some VTEC Oil Pressure Switches may have been manufactured with misalignment between the valve shaft and valve shaft guide which may lead to a sticking. The MIL illuminates for VTEC Oil Pressure Switch Circuit High Voltage. Remedy: Corrected part has been applied to the assembly line and is available for servi
6806	VECI label, part number A282 221 29 02, contains incorrect engine family identification. The manufacturer will initiate a voluntary service campaign to replace the label at the vehicles next workshop visit. 12/22/2010: Mfr rep is verifying that owners are being notified.
6807	Numerous Diagnostic Trouble Codes (DTC) and illumination of the Malfunction Indicator Lamp (MIL) have lead to the replacement of the rear Oxygen Sensor (O2). It was discovered that this defect was a software issue of the Engine Control Unit programming. For the short term a more robust diagnostic software was im
6808	Poor performance of the high pressure fuel pump may lead to poor starting and other potential engine problems. It has been determined of the 3,597 vehicles produced approximately 203 vehicles will be involved. These vehicles will have the fuel pump replaced, with an updated part, at their next service visit.
6809	The component that failed is the high pressure fuel pump. The identified failure is a seized or stuck piston in the pump. The probable cause of failures is that some pumps had a spring side load on the piston in the pump. Remedy: The pump design has been modified to reduce the spring side load potential. Also,
6810	DTC P0128 which monitors the engine coolant temperature's ability to reach the thermostat regulating temperature was modified to include the engine off timer. The timer is used to ensure sufficient engine cool down time has elapsed before the system on the next drive cycle. Due to a design implementation anoma
6811	Owner complaints of, poor starting, rough running, and Malfunction Indicator Lamp illumination may be caused by defective fuel pumps. Part number XR852864 was reported as the causal part. This defect has no impact on emissions. Report J10008D0A adds part number XR852872 and 2008 and 09 model years.
6812	Owner complaints of, poor starting, rough running, and Malfunction Indicator Lamp illumination may be caused by defective fuel pumps. Part number XR852864 was reported as the causal part. This defect has no impact on emissions.
6813	Owner complaints of, poor starting, rough running, and Malfunction Indicator Lamp illumination may be caused by defective fuel pumps. Part number XR852864 was reported as the causal part. This defect has no impact on emissions.
6814	Owner complaints of, poor starting, rough running, and Malfunction Indicator Lamp illumination may be caused by defective fuel pumps. Part number XR852864 was reported as the causal part. This defect has no impact on emissions.
6815	Owner complaints of, poor starting, rough running, and Malfunction Indicator Lamp illumination may be caused by defective fuel pumps. Part number XR852864 was reported as the causal part. This defect has no impact on emissions.
6816	Owner complaints of, poor starting, rough running, and Malfunction Indicator Lamp illumination may be caused by defective fuel pumps. Part number XR852864 was reported as the causal part. This defect has no impact on emissions.
6817	Owner complaints of, poor starting, rough running, and Malfunction Indicator Lamp illumination may be caused by defective fuel pumps. Part number XR852864 was reported as the causal part. This defect has no impact on emissions.
6818	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6819	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6820	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6821	One of several evaporative emission DTCs may be setting on 2007-09 vehicles due to vent control valve contamination. Remedy: Affected vehicles will likely be brought to a dealership for repair due to the illumination of the MIL. If this occurs the dealers will make the necessary repair according to a Nissan TSB. The
6822	On certain vehicles built before may 16, 2005 the fuel sending level sending unit potentiometer card may become contaminated. If this occurs the gauge may not read full when it is full, it may have slow response to full after filling or it may be inaccurate. Remedy: Nissan and Infiniti TSBs direct the technician to repla

6962	red by the manufacturer during routine production line tests.	
6963	y the MIL may have been illuminated because of a loose gas cap.	
6964	nt. This defect was discovered during confirmation tests performed at the assembly plant. The Manufacturer will implement an improved software on the vehicles at their next service visit.	
6965	nt. This defect was discovered during confirmation tests performed at the assembly plant. The Manufacturer will implement an improved software on the vehicles at their next service visit.	
6966	pinpointed to open circuit or flux agent in the sensor. Production changes by the supplier were introduced and the new part is available for production and service repairs. Update 2010/2/11 adds the 2006 2.0366 Engine Family and adds DTC P2185. Also a new sub supplier is being used. Update 2010/6/16 adds the 2006 2.5253 Engine Family. Also adds part number	
6967	affected ECMs.	
6968		
6969	t pin and increase the number of vent holes in the isolator shield from one to six to increase ventilation and reduce corrosion.	
6970	he manufacturer of the ECU, A/F sensor and O2 sensor to correct the concern observed with the production of ECU, A/F and O2 sensor. In addition for the concerns identified the following actions have been taken. R/C & Field Fix 06-TF-49, 06-TR-07, 06-TF-08, 06-TF-49, 06-TR-24.	
6971	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6972	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6973	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6974	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6975	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6976	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6977	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6978	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6979	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6980	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6981	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6982	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6983	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6984	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6985	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6986	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6987	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6988	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6989	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6990	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6991	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6992	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6993	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6994	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6995	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6996	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6997	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6998	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
6999	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
7000	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
7001	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
7002	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
7003	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.	
7004	vent control valve will be replaced with an improved one from a new supplier and an inline filter kit will be installed to help prevent recurrence of the contamination issue.

7066	Micro cracks may develop in the plastic container used to contain the battery packs in the hybrid generator battery assembly. The micro cracks are a result of excessive internal stress in the plastic introduced during the component manufacturing process. The micro cracks may allow enough electrolyte to leak out of the
7067	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock. Remedy: The A/F sensor ceramic trap design was changed in production to an improved water protection for the element, which is a thicker trap layer. Affected vehicles will likely be brought in for service t
7068	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock. Remedy: The A/F sensor ceramic trap design was changed in production to an improved water protection for the element, which is a thicker trap layer. Affected vehicles will likely be brought in for service t
7069	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock. Remedy: The A/F sensor ceramic trap design was changed in production to an improved water protection for the element, which is a thicker trap layer. Affected vehicles will likely be brought in for service t
7070	The A/F sensor used for air/fuel control may be damaged due to water intrusion and the resultant thermal shock. Remedy: The A/F sensor ceramic trap design was changed in production to an improved water protection for the element, which is a thicker trap layer. Affected vehicles will likely be brought in for service t
7071	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7072	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7073	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7074	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7075	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7076	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7077	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7078	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7079	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7080	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7081	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7082	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7083	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7084	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7085	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7086	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7087	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7088	Due to inappropriate calibration of the PCM, escess oil consumption may occur under certain driving conditions, and certain spark plugs may intermittently be carbon fouling or their insulators may be broken which results in misfire. The MIL illuminates. Remedy: A PCM with an improved calibration is made available fo
7089	Due to inappropriate calibration of the PCM, escess oil consumption may occur under certain driving conditions, and certain spark plugs may intermittently be carbon fouling or their insulators may be broken which results in misfire. The MIL illuminates. Remedy: A PCM with an improved calibration is made available fo
7098	Due to inappropriate calibration of the PCM, escess oil consumption may occur under certain driving conditions, and certain spark plugs may intermittently be carbon fouling or their insulators may be broken which results in misfire. The MIL illuminates. Remedy: A PCM with an improved calibration is made available fo
7099	Malfunction Indicator Lamp (MIL) illumination prompts drivers to take the vehicle to the dealer for repairs. Evaporative emissions leak codes stored in the Engine Control Unit (ECU) lead the technicians to replace the Diagnostic Module- Tank Leakage (DTML). The defective DTML prevents the completion of an evaporativ
7100	Malfunction Indicator Lamp (MIL) illumination prompts drivers to take the vehicle to the dealer for repairs. Evaporative emissions leak codes stored in the Engine Control Unit (ECU) lead the technicians to replace the Diagnostic Module- Tank Leakage (DTML). The defective DTML prevents the completion of an evaporativ
7101	Malfunction Indicator Lamp (MIL) illumination prompts drivers to take the vehicle to the dealer for repairs. Evaporative emissions leak codes stored in the Engine Control Unit (ECU) lead the technicians to replace the Diagnostic Module- Tank Leakage (DTML). The defective DTML prevents the completion of an evaporativ
7102	Malfunction Indicator Lamp (MIL) illumination prompts drivers to take the vehicle to the dealer for repairs. Evaporative emissions leak codes stored in the Engine Control Unit (ECU) lead the technicians to replace the Diagnostic Module- Tank Leakage (DTML). The defective DTML prevents the completion of an evaporativ
7103	Malfunction Indicator Lamp (MIL) illumination prompts drivers to take the vehicle to the dealer for repairs. Evaporative emissions leak codes stored in the Engine Control Unit (ECU) lead the technicians to replace the Diagnostic Module- Tank Leakage (DTML). The defective DTML prevents the completion of an evaporativ
7104	On some vehicles a software error may allow Multiple Displacement System (MDS) reactivation above 3000 RPM engine speed resulting in hydraulic camshaft lifter and/or pushro dover load. The condition can occur if misfire is detected during a 4 to 8 cylinder transition. MDS transition at very high engine speeds can ca
7105	Owner complaints of Malfunction Indicator Lamp (MIL) illumination have lead to Engine Coolant Temperature Sensor (ECT) replacement. Diagnostic Trouble Codes (DTC) P0118, P1290 and P2181 are associated with the failed part 06A 919 501 which is being replaced with part number 06A 919 501 A. Failures have been
7106	Owner complaints of Malfunction Indicator Lamp (MIL) illumination may be related to Evaporative Purge Valve part number 06E 906 517 A. Diagnostic Trouble Codes (DTC) P0442, 0441 and 0456 will lead technicians to replace the purge valve. 38% of the parts tested failed due to sticking, contamination or seal transfer
7107	An intermittent electrical malfunction of the Engine Speed Sensor (ESS) (part number 07K 906 433 B)may render the vehicle inoperable. Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0322, P0321 lead to the replacement of the ESS. DTC P0106 was also reported but this codes relat
7108	An intermittent electrical malfunction of the Engine Speed Sensor (ESS) (part number 07K 906 433 B)may render the vehicle inoperable. Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0322, P0321 lead to the replacement of the ESS. DTC P0106 was also reported but this codes relat
7109	An intermittent electrical malfunction of the Engine Speed Sensor (ESS) (part number 07K 906 433 B)may render the vehicle inoperable. Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0322, P0321 lead to the replacement of the ESS. DTC P0106 was also reported but this codes relat
7110	An intermittent electrical malfunction of the Engine Speed Sensor (ESS) (part number 07K 906 433 B)may render the vehicle inoperable. Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0322, P0321 lead to the replacement of the ESS. DTC P0106 was also reported but this codes relat
7111	An intermittent electrical malfunction of the Engine Speed Sensor (ESS) (part number 07K 906 433 B)may render the vehicle inoperable. Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0322, P0321 lead to the replacement of the ESS. DTC P0106 was also reported but this codes relat
7112	An intermittent electrical malfunction of the Engine Speed Sensor (ESS) (part number 07K 906 433 B)may render the vehicle inoperable. Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0322, P0321 lead to the replacement of the ESS. DTC P0106 was also reported but this codes relat
7113	Rattling noises from underneath these vehicles may be do to underbody catalyst substrate breakage due to excessive pressure during the canning operation in catalyst manufacture. No further follow-up action is planned since owners are expected to obtain service for their vehicles if condition occurs.
7114	Some vehicles may have PCM that are susceptible to water damage. Such damage can occur when water leaks through openings in body joints onto the PCM. Remedy: Ford released a TSB to ad foam body clips and body seam sealant to permanently correct the condition for affected customers. TSB 10-3-3 additiona
7115	Some vehicles may have PCM that are susceptible to water damage. Such damage can occur when water leaks through openings in body joints onto the PCM. Remedy: Ford released a TSB to ad foam body clips and body seam sealant to permanently correct the condition for affected customers. TSB 10-3-3 additiona
7116	Some vehicles may have PCM that are susceptible to water damage. Such damage can occur when water leaks through openings in body joints onto the PCM. Remedy: Ford released a TSB to ad foam body clips and body seam sealant to permanently correct the condition for affected customers. TSB 10-3-3 additiona
7117	Some vehicles may have PCM that are susceptible to water damage. Such damage can occur when water leaks through openings in body joints onto the PCM. Remedy: Ford released a TSB to ad foam body clips and body seam sealant to permanently correct the condition for affected customers. TSB 10-3-3 additiona
7118	Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0441 incorrect purge control, P0455 EVAP gross leak and P0456 EVAP small leak stored in the ECM's memory. May be caused by a defective Evaporative Purge Valve (part # 06D 133 517 B), 71% of the analyzed parts show leakage and
7119	Malfunction Indicator Lamp (MIL) on with the following Diagnostic Trouble Code (DTC) were observed P0300 (Random/Multiple Cylinder Misfire) also any single misfire code may be present (P0301-0306). Analysis of sample parts (part number 06E 905 115 D) shows that the majority of the complaints were caused by ele
7120	Some vehicles are experiencing an error in tightening the fuel filler cap resulting in an evaporative emission leak DTC. An analysis of available field reports indicates that a very high percentage of these are due to the owner incorrectly installing the fuel cap either by pushing while turning the cap or by not tightening to
7121	Some vehicles are experiencing an error in tightening the fuel filler cap resulting in an evaporative emission leak DTC. An analysis of available field reports indicates that a very high percentage of these are due to the owner incorrectly installing the fuel cap either by pushing while turning the cap or by not tightening to
7122	Failure of the Selective Catalyst Reduction (SCR) system pump illuminates the Malfunction Indicator Lamp (MIL). Diagnostic Trouble Codes P20E8 and 20E9 will be logged in the memory of the Engine Control Module (ECM) also. A software charge will also be required to repair the vehicles involved. Emissions will increase
7123	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7124	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7125	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7126	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7127	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7128	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7129	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7130	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7131	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7132	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7133	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7134	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7135	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7136	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7137	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7138	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7139	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7140	On some vehicles the stack-up of tolerances between the flexplate and the crankshaft position sensor (CKPS) can exceed the allowable limit, resulting in a temporary loss of the CKPS output signal at high engine speed (typically above 5000 RPM) and cause MIL illumination for DTC P0339 (CKPS circuit intermittent).Rem
7141	Failure of the Selective Catalyst Reduction (SCR) system pump illuminates the Malfunction Indicator Lamp (MIL). Diagnostic Trouble Codes P20E8 and 20E9 will be logged in the memory of the Engine Control Module (ECM) also. A software charge will also be required to repair the vehicles involved. Emissions will increase
7142	Numerous failures of the thermostat (inc. housing) ,part number 11537534521, lead to owner complaints of Malfunction Indicator lamp (MIL) illumination. Failures include leakage, temperature sensor failure and/or electrical contact corrosion. There is no impact on emissions or drivability with this concern.
7143	Numerous failures of the thermostat (inc. housing) ,part number 11537534521, lead to owner complaints of Malfunction Indicator lamp (MIL) illumination. Failures include leakage, temperature sensor failure and/or electrical contact corrosion. There is no impact on emissions or drivability with this concern.
7144	The P1421 DTC for intake air low pressure switch circuit high voltage is being set on some Versa 1.8L vehicles. This DTC is being set by a programming irregularity in the ECM. Remedy: A TSB is being created and will be distributed for this issue that instructs dealers to reprogram the ECM.
7145	Some vehicles equipped with 2.7L engines have experienced an intermittent condition that leads to the MIL illumination with a diagnostic trouble code P0130 indicating an open circuit of a front bank1 oxygen sensor. It is thought that an intermittent high resistance condition resulting from insufficient electrical continuity
7146	Some 2010MY vehicle equipped with 2.0L engines have experienced a malfunction indicator light illumination as a result of a thermostat monitoring error (P0128). The main cause is insufficient opening temperature of thermostat due to inner part defect (bent). REMEDY: Kia will publish a TSB to provide repair informa
7147	Some 2010MY vehicle equipped with 2.0L engines have experienced a malfunction indicator light illumination as a result of a thermostat monitoring error (P0128). The main cause is insufficient opening temperature of thermostat due to inner part defect (bent). REMEDY: Kia will publish a TSB to provide repair informa
7148	Poor sealant used on the Camshaft Position (CMP) actuator may allow engine oil to follow the wiring harness to the Engine Control Module (ECM). Part numbers A271 051 01 77 and A111 051 01 77. Once the oil reaches the ECM harness plug it will leach into the unit itself. If enough oil accumulates inside it can "short o
7149	** NO DR SUBMITTED ** CARB and EPA approved Subaru's Certification Change request #11-01 which covers a change to the ECU strategy and calibration of the air-fuel ratio sensor's heater waiting time. All CARB issued 2011MY Executive Orders were conditionally certified with a reprogramming requirement that earlie

Per the applicable model year owner manual, "if the fuel cap is not tightened until it clicks or if the tether is caught under the cap the Check Engine warning light may come on. RE
7186	Very small particles can contaminate the Valve Timing Control (VTC) solenoid leading to a MIL illumination for the DTC P0011 code. It is believed that these are due to the initial manufacturing process with no issue of recurrence once remedied. REMEDY: For production starting in July 2009 active cleaning logic for the
7187	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns are related to the catalytic converters which are being replaced by part numbers 3C0 254 502 TX, 3C0 254 503 PX and 3C0 254 504 BX. Vehicles ex
7188	Owner complaints of rattling noises and/or Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0420 and P0430. These concerns are related to the catalytic converters which are being replaced by part numbers 3C0 254 502 TX, 3C0 254 503 PX and 3C0 254 504 BX. Vehicles ex
7189	There are reports of a malfunction in the Intake Manifold Runner (possible binding of the flap), part number 06J 133 201 G. This malfunction will illuminate the Malfunction Indicator Lamp and store Diagnostic Trouble Code (DTC) P2015. There is no effect on emissions and test data was provided. Modified dimensional
7190	Malfunction Indicator Lamp Illumination (MIL) in association with stored Diagnostic Trouble Code P 0455 lead to the replacement of the purge valve assembly. It has been determined that the valve, part number 3W0 133 986 N, is stuck open by carbon particles from the charcoal canister. The particles escape because o
7191	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
7192	Exhaust pipes are being replaced in conjunction with oxygen sensor failure reported in Defect Report 2008-12. Malfunction Indicator Light (MIL) illumination associated with Diagnostic Trouble Codes (DTC) P0421 and P0431 lead to the replacement of the oxygen (O2) sensor. Replacement of the pipe may be required if
7193	High pressure fuel injectors are being replaced for two concerns, loose springs clips on the injector and for coking of the injector. Both concerns may cause rough running conditions an impact on emissions is not yet known. A production change was made 12/2009 to correct the spring clip concern, the coking concern is ur
7194	Spark plugs have been found to be defective because of loose platinum coating on the ground electrode caused by a flaw in the manufacturing process. Workshop Service Action W728 was issued April 2008 to replace all spark plugs, part number 999 170 122 90, in the vehicles involved. The impact on emissions is unk
7195	Exhaust pipes which include catalysts are being replaced because of complaints of Malfunction Indicator Lamp (MIL) illumination. Diagnostic Trouble Codes (DTC) P0421 and P0431 are associated with this concern. Part numbers 955 113 021 01, 955 113 021 10, 955 113 021 11, 955 113 021 30, 955 113 021 40, 955
7196	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0456 and P0455. Part number 997 110 029 73. No other information was provided as the manufacturer will continue to monitor the concern.
7197	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0456 and P0455. Part number 997 110 029 73. No other information was provided as the manufacturer will continue to monitor the concern.
7198	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0456 and P0455. Part number 997 110 029 73. No other information was provided as the manufacturer will continue to monitor the concern.
7199	Fuel tank vent lines are being replaced based on Diagnostic Trouble Codes P0441 and P0455. Part number 9A1 110 091 02 these lines include a purge valve which has become stuck open causing the concern. There may be customer complaints of vehicle hesitation. The manufacturer will continue to monitor the concern
7200	Catalytic converters, part numbers 997 113 109 33 and 997 113 110 33, are being replaced based on Diagnostic Trouble Codes P0421 and P0431. However, the manufacturer believes, based on tests performed on returned parts, that a damaged Oxygen sensor is the real causal part. A technical Service Bulletin was iss
7201	On some trucks equipped with 5.7L engines the rear exhaust manifold bolts may break due to thermal stresses. Remedy: Chrysler has upgraded to stainless steel bolts in production. Dealers have been instructed to replace damaged bolts with the upgraded stainless steel bolts.
7202	In severely corrosive environments where road salts are frequently used in winter vehicles may be exposed to road debris (mud) mixed with road salt. This material can become trapped between a reinforcing bracket and the fuel filler pipe potentially causing corrosion. Over time corrosion could damage the fuel filler pi

This material can become trapped between a reinforcing bracket and the fuel filler pipe potentially causing corrosion. Over time corrosion could damage the fuel filler pi
7204	As a result of a poor seal between the fuel filler pipe and the fuel cap the key-off monitor will detect an evaporation emission fuel vapor leak that will activate the MIL 'ON' condition and store the DTC P1423 in the ECM. Remedy: A TSB has been issued that instructs that the fuel filler pipe and fuel cap of affected in-us
7205	As a result of a poor seal between the fuel filler pipe and the fuel cap the key-off monitor will detect an evaporation emission fuel vapor leak that will activate the MIL 'ON' condition and store the DTC P1423 in the ECM. Remedy: A TSB has been issued that instructs that the fuel filler pipe and fuel cap of affected in-us
7206	As a result of a poor seal between the fuel filler pipe and the fuel cap the key-off monitor will detect an evaporation emission fuel vapor leak that will activate the MIL 'ON' condition and store the DTC P1423 in the ECM. Remedy: A TSB has been issued that instructs that the fuel filler pipe and fuel cap of affected in-us
7207	Downstream oxygen sensor circuit no activity detected. Fuel level sensor "A" circuit range/performance misdiagnosis if fuel tank is significantly angled. Evaporative emission system leak misdiagnosis detected. Remedy: Hyundai will publish a TSB to provide reprogramming information to Kia dealers for this condition.
7208	Some vehicles have experienced false MIL illumination accompanied by DTC P0128, Coolant Temp Below Thermostat Regulating Temperature. In certain driving conditions these fault codes may be set when no component or emission malfunction exists, therefore the false MIL. Remedy: To prevent these erroneous M
7209	Kia has received owner complaints of vibration or rough idle at idle when the gear selector is put in (D)rive. Kia has inspected these vehicles but could find find any problem. Remedy: Although vehicles are normal Kia will release an ECU data update with idle RPM changed from 550 to 650RPM.
7210	Kia has received owner complaints of vibration or rough idle at idle when the gear selector is put in (D)rive. Kia has inspected these vehicles but could find find any problem. Remedy: Although vehicles are normal Kia will release an ECU data update with idle RPM changed from 550 to 650RPM.

7185	MEDY: Subaru is replacing the broken tether with a new fuel cap/tether assembly under California and Federal emissions warranties.	
7186	VTC solenoid has been incorporated into the vehicle software in case the VTC solenoid sticks with contamination. In the field if an issue were to occur the VTC solenoid will be replaced. The customer will notice the incident immediately due to the MIL illumination and return the vehicle for repair.	
7187	hibiting the rattling concern have emissions that exceed the given standards for NOx. Vehicles with MIL only concerns were within the given standards and neither concern exhibit any drivability problems. There were no production changes for the 2006 model year but an improved catalyst was made available for 2007 models during Calendar Week 46/2006. These con	
7188	hibiting the rattling concern have emissions that exceed the given standards for NOx. Vehicles with MIL only concerns were within the given standards and neither concern exhibit any drivability problems. There were no production changes for the 2006 model year but an improved catalyst was made available for 2007 models during Calendar Week 46/2006. These con	
7189	tolerances were implemented at vendor for MY 2009. Update 2010/9/1 adds 2009 2.03UA engine family.	
7190	f an inconsistent filter gauze installation. The vendor for the charcoal canister has changed production methods to insure proper placement of the filter gauze. Report 2010/9/2 adds the 2008 model year.	
7191	Emissions will be affected when the vehicle is driven with a cracked sensor but drivability will not. Part numbers 9A1 606 168 00 and 9A1 606 168 01 have been involved. The manufacturer has made a change to the programming of the Engine Control Module (ECM) which they believe will correct this condition. Update 1 adds 2010 Model Year with 2 failures. Update 2 a	
7192	the bad O2 sensor can not be removed without damaging the pipe. Part number 955 113 035 01 and 955 113 036 01 are involved.Update 1 dated 3/8/2010 changes the sales volume for 2009 models and replaced part numbers for both model years. Also part numbers 955 113 035 02 and 955 113 036 02 have been added to the report.Update 2 adds 2010 Model y	
7193	der investigation. Part numbers 955 605 232 00 and 955 605 233 00 are involved. Update 1 adds the 2010 Model Year.	
7194	nown all though the vehicle may exhibit hesitation and miss fire concerns. Update 1 adds the 2009 Model Year. Also the defect description has changed to putting the blame on defective coils.	
7195	113 022 01, 955 113 022 10, 955 113 022 11, 955 113 022 30, 955 113 022 40, or 955 113 022 50 are associated with this defect. The impact on emissions is unknown at the time of this report and there is no impact on drivability.Update 1 dated 11/9/2009 adds one new part number (995 113 021 50) and updates failed parts totals.Update 2 adds 2009 4.8SED Eng

This fault code is used to flag the moisture test of the leak detection pump. This was a software issue where the thresholds were much too strict and would fail the
7301	Customers have been experiencing vehicle hesitation issues and / or Malfunction Indicator Lamp (MIL) on. The source of the problem appears to be the high pressure fuel pump, part number 948 110 315 02. It has been determined that the following types of problems are root causes. 1) The steel bellow within the pu
7302	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
7303	Fuel filler caps are being replaced for two main concerns, a broken tether or Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 201 241 20, 955 201 550 10 or 955 201 241 11 are involved. The manufacturer has no follow up plans at this time.
7304	Fuel tanks are being replaced for complaints of hard refueling, in some cases the anti-spit-back valve was not welded correctly. Fuel tank part numbers 955 201 075 10, 955 201 075 11, 955 201 075 12, 955 201 075 13, and 955 201 075 15 are involved. No drivability or emissions related concerns were provided. A pro
7305	Poor crimping of the heater wire inside the Oxygen sensor causes Malfunction Indicator Lamp (MIL) illumination. Part numbers 955 606 128 30 and 655 606 129 30 are involved in this report. An improved crimping process was introduced at the supplier in December 2007. Update 1 adds two part numbers, 955 606 136
7306	Engine hesitation and Malfunction Indicator Lamp (MIL) illumination may be associated to the mass air flow sensor. Part number 955 605 123 35. The manufacturer is currently monitoring the situation. Update 1 dated 11/9/2010 adds the 2009 and 2010 Engine Families. Also the report states the majority of returned p
7307	Engine hesitation and Malfunction Indicator Lamp (MIL) illumination may be associated to the mass air flow sensor. Part number 955 605 123 35. The manufacturer is currently monitoring the situation. Update 1 dated 11/9/2010 adds the 2009 and 2010 Engine Families. Also the report states the majority of returned p
7308	Malfunction Indicator Lamp (MIL) illumination, in turbo charged vehicles, is being attributed to debris or oil contamination in the air mass sensor, part number 997 606 125 00. The guided fault finder function in the On-Board Diagnosis (OBD) Tester has been improved to pinpoint which individual sensor is the root cause
7309	Malfunction Indicator Lamp (MIL) illumination, in turbo charged vehicles, is being attributed to debris or oil contamination in the air mass sensor, part number 997 606 125 00. The guided fault finder function in the On-Board Diagnosis (OBD) Tester has been improved to pinpoint which individual sensor is the root cause
7310	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change w
7311	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change w
7312	Fuel indicator sending units are being replaced based on complaints of improper fuel gauge readings and no start conditions. It has been found that the fuel sender arms are catching on hoses inside the fuel tank. Part numbers involved are 955 620 805 00, 955 620 806 00 and 955 620 806 01. A production change w
7313	Replacement of fuel pumps 955 620 131 00 and 955 620 132 10 are being performed to correct a hesitation concern. There is no impact on emissions and a production change is planned for March, 2009. Update 1 states after analysis of returned parts it was determined the low pressure pumps are not the root cause
7314	Replacement of Carbon Canisters (Part number 955 201 801 03) is being done based on Malfunction Indicator Lamp (MIL) illumination with various evaporative leak codes. There is no impact on drivability and the impact on emissions is not yet known. This issue is under investigation, there is no follow up plan at this t
7315	High pressure fuel injectors are being replaced based on Malfunction Indicator Lamp (MIL) illumination and possibly rough running conditions. Injectors were only available in sets of 4, the manufacturer has just released them individually. At this time it is unknown the exact number of injectors that are defective 32 have
7316	Concerns with a small vacuum leak at the change over valve, 996 605 123 01, which will cause Malfunction Indicator Lamp (MIL) illumination. The impact on emissions is unknown and there is no drivability concerns. The manufacturer has no follow-up plan at this timeUpdate 1 adds three (3) Engine Families.Update 2 a
7317	Owner concerns of Malfunction Indicator Lamp (MIL) illumination or the engine cooling fan not running may be related to a defective temperature sensor. Engine over heating while driving at slow speeds on warm days may also be experienced. Part number 997 606 213 00. The replaced parts have not reached the requ
7318	Owner concerns of Malfunction Indicator Lamp (MIL) illumination or the engine cooling fan not running may be related to a defective temperature sensor. Engine over heating while driving at slow speeds on warm days may also be experienced. Part number 997 606 213 00. The replaced parts have not reached the requ
7319	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
7320	Pressure pipes for the Turbo Charging System are being replaced because they become loose. When the pipes loosen there is a loss in Turbo boost. The Malfunction Indicator Lamp (MIL) will illuminate and the vehicle will hesitate and loose power. The impact on emissions will be minimal because the hesitation and los
7321	Customer complaints of engine miss fire or running rough are related to spark plugs. It is believed the failures are a result of water intrusion caused by high pressure washing of the engine and engine compartment area. Water is channeled into the spark plug and coil causing corrosion at the mating surfaces. A Technic
7322	Customer complaints of hesitation, lack of power and Malfunction Indicator Lamp (MIL) illumination are being pinpointed to high pressure fuel pumps. Part numbers 9A1 110 315 01 or 9A1 110 315 02 have been reported. Low fuel pressure can cause a lean running condition which will increase vehicle emissions. A produ
7323	Customer complaints of hesitation, lack of power and Malfunction Indicator Lamp (MIL) illumination are being pinpointed to high pressure fuel pumps. Part numbers 9A1 110 315 01 or 9A1 110 315 02 have been reported. Low fuel pressure can cause a lean running condition which will increase vehicle emissions. A produ
7324	Customer complaints of difficulty filling the fuel tank have lead to the replacement of fuel filler necks. Reported part numbers are 997 201 043 02 or 997 201 043 08. The is no impact on drivability or emissions and the concern is under investigation. Update 1 dated 6/7/2010 adds 2009 3.8CDI Engine Family and part
7325	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination associated with Diagnostic Trouble Code (DTC) P2270. Part number involved in this possible defect is 997 606 138 02.
7326	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
7327	The Transmission Control Unit is being replaced with each transmission replacement, because re-calibration was not available. Or it may have been replaced due to owner complaints of harsh shifting or the inability to select a new gear. At the time of this report the manufacture is not able to differentiate between scena
7328	Carbon Canisters are being replaced based on Malfunction Indicator Lamp (MIL) illumination and numerous evaporative leak codes. Part number 958 201 221 20 was reported. There will be no impact on drivability but will have a potential for a small evaporative emissions leak.
7329	Carbon Canisters are being replaced based on Malfunction Indicator Lamp (MIL) illumination and numerous evaporative leak codes. Part number 958 201 221 20 was reported. There will be no impact on drivability but will have a potential for a small evaporative emissions leak.
7330	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 103 90 is involved. Porsche will continue to monitor this concern.
7331	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 103 90 is involved. Porsche will continue to monitor this concern.
7332	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 103 90 is involved. Porsche will continue to monitor this concern.
7333	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7334	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7335	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7336	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7337	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7338	Spark plug failure results in customer complaints of engine miss fire, running rough and/or Malfunction Indicator Lamp (MIL) illumination. Part number 999 170 130 90 is involved. Porsche will continue to monitor this concern.
7339	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7340	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7341	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7342	Pre-catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Porsche is currently investigating this issue. However, none of the Engine Family numbers provided have reached the required number of failures to warrant submission of a defect report. Part number 9A1 606 123 01 wa
7343	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Part number involved in this possible defect is 9A1 606 177 01. Porsche is investigating this issue and only the 2009 Engine Family achieved the required number of failures.
7344	Post catalyst oxygen sensor are being replaced due to Malfunction Indicator Lamp (MIL) illumination. Part number involved in this possible defect is 9A1 606 177 01. Porsche is investigating this issue and only the 2009 Engine Family achieved the required number of failures.
7345	Due to a manufacturing defect the exhaust temperature sensor may be susceptible to water ingress. Part numbers 9A1 606 250 04, 9A1 606 250 06 and 000 043 301 37 were reported. However the total number of failures was 3, which does not warrant submission of a defect report. A service bulletin was issued to instru
7346	On throttle position sensor (TPS) which consists of brush contact and resistive element, the brush contact may be worn out prematurely due to insufficient brush durability against a usage to drive in stop-and-go traffic frequently with repeated throttle operation. As a result abrasion dust of brush may adhere on resistive

The catalyst internals (washcoat, loading, etc) are all correct and this w
7524	The P1421 DTC code for Intake Air Low Pressure Switch Circuit High Voltage is being set on some vehicles. This DTC is caused by a programming irregularity in the ECM. Remedy: The issue was corrected in production. A TSB has been created to instruct dealerships to reprogram the ECM.
7525	Under certain driving conditions the OBD system may falsely detect a malfunction of the thermostat. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct calibration is made available for repair under Field Fix#6D. The PCM will be updated under emission warranty acco
7526	Under certain driving conditions the OBD system may falsely detect a malfunction of the thermostat. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct calibration is made available for repair under Field Fix#6D.
7527	Under certain driving conditions the OBD system may falsely detect a malfunction of the thermostat. The cause of the failure is inappropriate calibration of the OBD system. Remedy: A PCM with a correct calibration is made available for repair under Field Fix#6D.
7528	Replacement of the Leak Diagnostic Pump, part number 16137193479, is due to a short to ground concern. This concern illuminates the Malfunction Indicator Lamp (MIL) which will lead the owners to return the vehicle to the repair shop for correction, so no further action is planned. 10% of the pumps replaced were not
7529	Malfunction Indicator Lamp (MIL) illumination and Diagnostic Trouble Codes (DTC) P0441 incorrect purge control, P0455 EVAP gross leak and P0456 EVAP small leak stored in the ECM's memory. May be caused by a defective Evaporative Purge Valve (part # 06D 133 517 B), 71% of the analyzed parts show leakage and
7530	Some vehicles have experienced malfunction indicator light illumination with a diagnostic trouble code P0441 indicating Evaporative Emission System-Incorrect Flow Detected when no leak exists. This false MIL is caused by a diagnostic threshold that is too sensitive. Remedy: Hyundai will publish a TSB to provide repai
7531	Some vehicles have experienced malfunction indicator light illumination with a diagnostic trouble code P0441 indicating Evaporative Emission System-Incorrect Flow Detected when no leak exists. This false MIL is caused by a diagnostic threshold that is too sensitive. Remedy: Hyundai will publish a TSB to provide repai
7532	Some vehicles with 2.7L engines have a software error regarding OBD system applying an in-use performance ratio (RBM) requirement. It was found that ECM stores and updates numerator and denominator normally but may not transmit the correct denominator value to certain Generic Scan Tools (GST). Should this c
7533	Some vehicles may experience 'bad shift feeling' which has been noted in some IQS customer surveys. To improve consumer satisfaction Hyundai will slightly modify the shift calibration for certain engine/transmission combinations to enhance the shift 'smoothness' via reprogramming of the engine control module. Re
7534	A slight hesitation may occur during moderate deceleration between 2,000 and 3,000 RPM. Remedy: For 2009 and later MY vehicles the ECM software was improved to eliminate the hesitation. For in-use vehicles Mitsubishi Motors will continue to, on a per-claim basis, reflash the ECM with the upgrade as described in T
7535	Some owners have complained regarding cooling performance on some vehicles equipped with 2.0/2.4L engines. The main complaint is air-conditioner doesn't get cold enough at idle under certain circumstances. Remedy: To improve customer satisfaction Kia will modify the idle RPM from 620 to 850RPM in A/CON-on
7536	Some owners have complained regarding cooling performance on some vehicles equipped with 2.0/2.4L engines. The main complaint is air-conditioner doesn't get cold enough at idle under certain circumstances. Remedy: To improve customer satisfaction Kia will modify the idle RPM from 620 to 850RPM in A/CON-on
7537	Some owners have complained regarding cooling performance on some vehicles equipped with 2.0/2.4L engines. The main complaint is air-conditioner doesn't get cold enough at idle under certain circumstances. Remedy: To improve customer satisfaction Kia will modify the idle RPM from 620 to 850RPM in A/CON-on
7538	Some owners have complained regarding cooling performance on some vehicles equipped with 2.0/2.4L engines. The main complaint is air-conditioner doesn't get cold enough at idle under certain circumstances. Remedy: To improve customer satisfaction Kia will modify the idle RPM from 620 to 850RPM in A/CON-on
7539	Some owners have complained regarding cooling performance on some vehicles equipped with 2.0/2.4L engines. The main complaint is air-conditioner doesn't get cold enough at idle under certain circumstances. Remedy: To improve customer satisfaction Kia will modify the idle RPM from 620 to 850RPM in A/CON-on
7540	Some vehicles equipped with 3.5L engines have experienced a MIL illumination with a DTC P0017 set indicating a bank 1 exhaust tooth offset error even though a malfunction has not occurred. This is due to improper programming of the PCM threshold for a malfunction. Remedy: To prevent this condition Hyundai wi

7588	ogrammed the PCM. A TSB will be published to provide repair information to dealers.	
7589	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7590	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7591	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7592	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7593	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7594	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7595	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7596	11 adds the cause of the failure which is due to contamination by carbon debris caused during the assembly process. The supplier changed the assembly process in June of 2008, these parts are also used in service repairs. Diagnostic Trouble Code P0442 was also provided.	
7597	Honda TSB 11-014 under safety recall campaign.	17951
7598	d. There is no impact on emissions or drivability when this part fails. The supplier changed the assembly process of the sensor in late 2008.	
7599	d. There is no impact on emissions or drivability when this part fails. The supplier changed the assembly process of the sensor in late 2008.

Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
7974	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
7975	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
7976	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
7977	The AS Tank Ventilation lines are being replaced by dealers based on Diagnostic Trouble Codes (DTC) P0441 and P0442. Owners are alerted to this concern by noises from the fuel tank area and/or Malfunction Indicator Lamp (MIL) illumination. Part numbers involved are 948 110 020 02, 948 110 020 03, 948 110 020
7978	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
7979	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
7980	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
7981	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
7982	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
7983	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
7984	Transmission control units are being replaced to address harsh shifting of the transmission when cold. Part numbers 955 618 022 12, 955 618 021 12 and 955 618 020 12, were listed in the report. Update 1 dated 7/22/2008 adds part numbers 955 618 020 11, 955 618 021 11, 955 618 022 11 and 955 618 022 00. A
7985	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
7986	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
7987	Pre-catalyst oxygen sensors are being replaced due to cracking of the support. Low speed/load conditions create water vapor in the pipes. When this cold water contacts the warm sensor it has the potential to crack. A cracked sensor illuminates the Malfunction Indicator Lamp (MIL) which alerts the owner to seek repairs
7988	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20
7989	Under certain driving conditions the vehicle may surge and the engine speed may fluctuate. The cause of the failure is inappropriate calibration of the PCM.Remedy: A PCM with an improved calibration has been applied to the assembly line and is made available for repair under Running Change/Field Fix#2V-R1 for 20

7991	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7992	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7993	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7994	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7995	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7996	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7997	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7998	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
7999	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8000	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8001	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8002	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8003	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8004	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8005	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8006	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8007	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8008	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8009	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8010	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8011	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8012	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8013	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8014	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8015	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8016	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E. DTC codes noted were P2539, 2540, 2541, 2543, 310B and 129F all related to low fuel pressure caused by intermittent, weal
8017	Malfunction Indicator Lamp (MIL) illumination and numerous Diagnostic Trouble Codes (DTC) could be caused by an electrical malfunction of the fuel pressure sensor, part number 06E 906 051 E.
