Hi Nahal,

DOGGR submits their Class II (oil and gas related) injection well inventory to EPA on an annual basis. The latest Class II injection well inventory they reported was 51,257 wells. That number would include both active wells and temporarily idled wells. However, there are certainly substantially more active injection wells than 988, so I am not sure what that number she got from DOGGR is. Perhaps she asked about wells within a certain geographic footprint? Not sure.

David

Mike/David,

Do we have a response to the below?

Thanks, Nahal. Still waiting for the answers to the other questions, but I wanted to clarify the 50,000 injection wells number you gave me. DOGGR says there are 988 active injection wells in the state. Can you explain the discrepancy to me?

Thanks!
