Additional Electric Power Potential = Difference of potential power and current power = 30078

Additional Thermal Energy Potential = Difffernce of potential and current energy = 1,157,000 M

Assumptions: 26 Kw and 2.4 Million BTU/Day produced for every 1 MGD treated (US EPA CHP F

Current production is based on average flow treated via digestion

Potential productions is estimated based on design flow which could be treated via digestion

It is assumed that no additional organic waste is accepted at any facility (simply due to a lack o

If current electrical energy produced were converted to low carbon transportation fuel, it woul

If current thermal energy produced were converted to low carbon transportation fuel, it would

If potential electrical energy production were converted to low carbon transportation fuel, it co

If potential thermal energy production were converted to low carbon transportation fuel, it cou
