Flag: Follow up

Hi All,

Attached is an endnote (whatever its called) with all the citations that were listed in the comments under CBD. I sorted them and uploaded the actual files into it. There are two groups ones we prob don't need to/can't review, and then a second look to rule them out or consider.

I know this isn't a true science based assessment response (like open lit reviews to consider for RQs), but I figured I'd start there so we had an idea of what was submitted. Anyhoo a second look would likely be helpful. If anything some of the categories could be helpful if we need to look at them somehow.

Also, I've never used endnote before, so there is a solid chance none of this worked.
Thanks,

Ryan

Subject: Neonic RTC Coordination
When: Thursday, November 12, 2020 9:00 AM-10:00 AM (UTC-05:00) Eastern Time (US & Canada).
Where: Microsoft Teams Meeting

Update: Rescheduled to Thurs 11/12. Sorry to keep bumping this, but we are having a scoping meeting with the PRD BCs to get a better idea what they are looking for in this RTC. It makes sense to have our EFED team meeting after that meeting (which has been rescheduled several times).

Hi everyone,

Let gather to coordinate an approach for the EFED neonic RTC document, as requested by PRD. If folks have a chance to skim the comments, the would be helpful for understanding the scope and effort needed for this action (Teams link is in the attached email).

I agree with a suggestion I received that it might make sense to identify one person to go through all the comments and identify/assign specific staff to write responses. For example, chemical specific comments can be assigned to the team lead of the chemical and method specific comments can go to the person who was the lead on that part of the method (e.g., residue bridging can be assigned to Keith). Please let me know if there are any volunteers.

More details and links are available in the attached email. Also, Matt Khan clarified regarding acetamiprid that PRD envisions separate RTC documents: 1 for acetamiprid; 1 for the 4 N-substituted neonics.

Thanks,
Monica
