Subject: RE: DRAFT DRAFT DRAFT RE: CDC inquiry [ref:_00DU0YCBU._500t082Gmt:ref], Ames Warehouse

Thanks, Karl.

I will review and let you know if I have any suggested edits to the draft response.

Loretta

Hello Loretta,

Let me put all this together in one email:

Hello Personal Matters / Ex. 6

Thank you for contacting us via CDC-INFO regarding the Ames Warehouse fire in Parkersburg WV. CDC/ATSDR has been coordinating with USEPA, WV state and local health, and Ohio state and local health, ATSDR R5, and DTHHS ERS. We have been reviewing available environmental data and continue to review data from State and Federal partners as it becomes available. We appreciate your concern and are open to supporting the State with further exposure evaluations of the general public and emergency responders.

ATSDR has yet to receive safety data sheets (SDSs) or comprehensive chemical information about what was in the warehouse. We have not received comprehensive chemical sampling results; therefore, there is uncertainty about what chemicals were in the smoke/plume that was potentially (or might still be) in the air. There have been strong plastics odors as well as typical combustion odors in residential areas. However, CDC/ATSDR does not have chemical information on what would be causing these odors or the public health implications.

Additional information and updates will be made available on the MOVHD website at www.movhd.com and on their Facebook page (Mid-Ohio Valley Health Department MOVHD).

Seems to me that she's making us aware (not asking a question). As such, how about,

Hello Personal Matters / Ex. 6

Thanks Loretta.
I am in transit to Shaffer right now.

Karl, can you take lead on a draft response and coordinate it with Charles, pulling from ERS draft email? (Charles can you share status of that email by the way?)

> I am a resident of the community in West Virginia experiencing the toxic fumes of the AMES fire. The County Commissioner stated at one of the meetings that the town had run out of money to put the fire out. I am concerned about the possible chemicals that are possibly burning and/or being released. I got a list from the Washington County Sheriff's Department of potential chemicals: (PVC,PTFE,Maleic Anhydride,Styrene, Fiberglass,Nylon, Carbon Black,Titanium Dioxide and TLB) that are potentially burning and/or being possibly being released. Many locals are experiencing headaches and nausea. The city is saying the fire may be around for another week . I am concerned about the health effects of breathing in all these toxic chemicals for such a prolonged period.. I want CDC to be aware of the situation we are experiencing and the potential danger to our health.
