Subject: Chloride isotope tracer as bellwether for strontium 90 groundwater plumes

Since we will be talking about Area 40 in Folsom and strontium 90 on the Aerojet site in general this week, here is a study of the relevant use of chlorine 36 as a groundwater tracer:
https://www.ncbi.nlm.nih.gov/pubmed/25128774

Pre (1944) and post (1975) bomb levels, and other background factors like latitude, for chlorine 36:
https://www.ncbi.nlm.nih.gov/pubmed/22305003
