Subject: Re: Third Site DNAPL Cell remediation work plan

Thanks David.

I believe Geosyntec's proposal was for bioremediation, not ISCO. The issue for both these technologies, as I'm sure everyone is aware, is that you have to wait for the DNAPL to dissolve in to the aqueous phase before the chemical or biological reactions can take place, and for chlorinated solvents, you can wait a very long time indeed for that to happen.

Thanks for reaching out to us on this, Matt. We still want to do what is right by this project and are convinced that another layer of electrodes at the bottom is all that is needed to knock this down to well below the remedial goals. Chasing DNAPL with ISCO in a tight formation……. is gong to add decades onto this project.

Please let us know if there is anything that we can do to help.

Cheers,

Brent

Matt,

Sorry for the delay in getting this to you - here's our response to the statements you mentioned in your e-mail below.

Hope you're doing well, and please let us know if there's anything else we can do to assist you.

Cheers,

Subject: Third Site DNAPL Cell remediation work plan

Matt,

Please find attached a work plan for the Third Site DNAPL area remediation program with a start date of Feb 1 as requested. Because of the short lead time, please confirm that we are authorized to proceed. If you have any questions or concerns, please let me know as soon as possible.

Regards,

Julie
