Art,

The best time for Dan and me is 8:00 am on 7/1. I do have to leave for an appointment at 8:45 that morning, so I'm hoping that 45 minutes will give us sufficient time for our discussion.

Thanks.

Louise

Louise and James:

I have attached the stack test results for the latest stack test conducted by NEW Water. This was filed with WDNR yesterday.

Louise:

I have checked with NEW Water about available dates for a call on the information you described below.

Here are the NEW Water times/dates we are available for the suggested call:

- Wednesday July 1 – 8:00 AM
- Wednesday July 1 – 1:30 PM
- Tuesday July 7 – 9:00 AM - noon

Let me know if any of these times/dates work for you and Dan.

Best regards,

Art

Art,

Thank you for providing the GAC-related information on 5/18. We have had a chance to take a closer look and develop some follow-up questions. I am attaching them to this email, with the suggestion that we set up a call to discuss them, rather than deal with written responses. Could you suggest some dates/times next week that would be convenience for New Water?

Also, when we last spoke on 5/27, New Water indicated that it had just completed additional PM stack testing and that it anticipated getting the results in 3-4 business days. Could you advise us as to the status of that information?

Thanks, and take care.

Louise

Louise;

I have attached the response from NEW Water to your 4/13/20 request for documents. I, of course, included James on this e-mail. Also, hope you don't mind that I have included Dan and Tania on this e-mail as well.

Feel free to call me if you have any questions after reviewing the attached.

Best regards,

Art

Subject: New Water: Follow-up Questions

[EXTERNAL] This message originated from outside your domain.

Art,

As a follow-up to our 4/8/20 conversation, and in furtherance of our settlement efforts, we request that New Water provide the following:

- The results from the granulated activated carbon (GAC) sulfur weight percent measurements required by the August 1, 2018 Alternative Monitoring Plan (AMP) approval letter from EPA Region 5.
  - The AMP required monthly measurements for the first three months following fluidized bed incinerator (FBI) startup, followed by measurements every six months thereafter. The FBI began operating on May 8, 2018 and the GAC failure occurred on November 7, 2019. So, the FBI/GAC operated for 18 months prior to GAC failure, which should result in at least four total analyzed carbon samples.
- GAC differential temperature and differential pressure measurements for the six-month period of FBI/GAC operation prior to the GAC system failure.
- The annual temperature and differential pressure sensor/transmitter calibration reports from 2018 and 2019.
- The scrubber liquid pH and flow rate readings for the six-month period of FBI operation prior to the GAC system failure.

Once EPA has had a chance to review this information and consult with WDNR, I will get back to you to discuss next steps.

In the meantime, stay safe.

Thanks.

Louise
