Webinar: SAP Business Blueprint Auto-Generation

Business blueprints created in Solution Manager tell SAP how to implement your business processes. The more detailed and accurate the blueprint, the more you get out of Solution Manager. Simple enough, right? Unfortunately, no. Creating blueprints has traditionally been such a time consuming task that most organizations have given up on the idea.

But what if you could *automatically* create and update blueprints in SAP Solution Manager 7.2?

Join us on **June 21st at 10:00am CDT** (GMT-5) to learn how you can:

- Populate and update Business Blueprints automatically with Worksoft Analyze
- Leverage Blueprints to implement Business Process Change Analyzer (BPCA)
- Integrate the Worksoft platform with Solution Manager to provide a complete automated testing and risk management solution
