Subject: Learn how to create sustainability plans - online course July 11-13

Sustainable City Network will present an online training course for any personnel who are responsible for developing sustainability plans, greenhouse gas emission inventories, climate action plans or any sustainability strategy for a community, business or institution.

This course will be presented in three 2-hour sessions held on consecutive days, July 11, 12 and 13, 2017. Class sessions will begin promptly at 10 a.m. Pacific, 11 a.m. Mountain, noon Central and 1 p.m. Eastern. The sessions will be recorded so registrants may attend live or via on-demand streaming video.

This course will focus on the implementation and strategic thinking that is required to implement a Sustainability Plan. Too often, we write a plan and have the greatest intentions of implementing all of the metrics only to have these ideas fall flat because of politics, organizational culture, or lack of support from the top. This course will teach you how to incorporate storytelling and systems thinking into a strategic plan that gets your plan implemented and enables you to move the needle further and faster to create a more sustainable community.

Antonia Graham has been energy & sustainability project manager for the city of Huntington Beach, Calif., since 2014. In that role, she oversees and administers all energy efficiency and sustainability projects for the city, and worked closely with city departments to create the city's sustainability plan and set reporting metrics. She also works with the business community to offer sustainable business workshops and a certification program. Antonia has been a part-time instructor at Irvine Valley College since 2012, an instructor at California State University, Fullerton, since 2010 and is a former adjunct instructor at the University of California, Irvine. She has a bachelor's degree in political science and American studies and an MPA in Public Administration - Finance from California State, and earned an executive Master's degree in sustainability leadership at Arizona State University.

WHO SHOULD ATTEND

This course is appropriate for municipal, state and federal government employees, educational and healthcare institution personnel and private-sector consultants or sustainability managers responsible for developing sustainability plans, greenhouse gas emission inventories, climate action plans and/or sustainability initiatives of any kind.

Class Format

This course consists of three 2-hour online sessions that take place on Tuesday, Wednesday and Thursday, July 11, 12 & 13, 2017. Each registrant will be provided with electronic copies of course materials prior to the online course.

Classes will include lecture and Q & A utilizing the GoToWebinar.com platform. A quiet room and a reliable Internet connection are required to take this course. See GoToWebinar.com for technical requirements.

Certificates of completion will be provided to all attendees after the final session.

Dates and Tuition

Each session will begin promptly at 10 a.m. Pacific Time, which is 11 a.m. Mountain Time, noon Central Time and 1 p.m. Eastern Time.

Price: The 6-hour course costs $363 when purchased by June 20 (a $436 value).
