I just received a disk containing all of the research material from George Partridge, Kentucky DEP. (George has changed positions and will no longer be working on this issue.)

Please find attached the letter listing all of the documents. I can try to send the documents in a separate email, but I am not sure of the size. (I haven't had time to look at the disk yet.)

The link above indicates the pervasiveness, over time, of a problem which should have been solved years ago, if money, laziness, stubborness and politics hadn't gotten in the way. It is incomprehensible to me that the news media hasn't addressed this issue in a meaningful way on a national level. Although I have complained about our local problem to authorities for years, I had no idea of the numbers of asthmatics, children and families across the U.S. who have had to endure life threatening exposure to open burning by our own military, with the full blessing of the EPA. It is simply a sad state of affairs when we, as a nation, place cost savings above the health of our citizens.

Sincerely,

Mark Toohey
