THE VALUE OF VOLUNTEER TIME

PHOTO: THE CAMPUS KITCHENS PROJECT

$23.07 per hour

Latest Estimated Value of Volunteer Time[1]

National Value of Volunteer Time

The estimate helps acknowledge the millions of individuals who dedicate their time, talents, and energy to making a difference. Charitable organizations can use this estimate to quantify the enormous value volunteers provide.

According to the Corporation for National and Community Service, about 62.6 million Americans, or 25.4 percent of the adult population, gave 7.7 billion hours of volunteer service worth $173 billion in 2013.[2] For the latest information, please see www.volunteeringinamerica.gov.

For more information on the economic impact of nonprofits by state, please visit our state profiles portal.

Methodology: The earliest attempt at estimating the average hourly rate of volunteer time was made by Harold Wolozin in "The Value of Volunteer Services in the United States" Action, September, 1976 using a marketplace value basis. His 1974 rate of $4.76 was 12 percent more than the 1974 average hourly earnings of nonagricultural employees. All subsequent value for volunteer time released by Independent Sector have been based on the **average hourly earning of workers on private nonfarm payrolls (BLS data) and increased by 12 percent to estimate for fringe benefits.**

This method however, only provides a national rate for volunteer time and does not take into account differences in labor conditions among states . To correct for these differences, a comparative wage measure, available on a state basis was considered.

The average hourly rate for employees in private industry was obtained for the entire U.S. and each state. The ratio between the national and state rate was computed for and the same ratio was applied to the national nonagricultural hourly earnings to calculate an individual rate for each of the states. These numbers provide the public the option of using the national dollar value of volunteer time or the dollar value specific to the state they operate in.

This method was recommended by BLS economist Mr. John Stinson
