Yes, yes – there's a typo in the memo 😉 I left out a zero in the app rate per tree. My bad!

Thanks for the catch. This means that about 150 trees per acre could be treated (at 0.0013 lb AI/acre). That would allow an entire orchard that has been replanted to be treated, since orchards probably have something like 100 to 200 plants per acre, as I recall from various planting density discussions over the year.
But there is probably also spot treatment of a few young trees planted in a mature grove. I wonder how much of each type of application is actually occurring.

Cheers, Nikhil

Hi Caleb,

Attached is the S18 Belay label for clothianidin/citrus.

Hi Stacey!

Could you please send a FL Section 18 Belay label if you have it handy? OPPIN query is down and the label would help in our PRP review.

Thanks.

Caleb
