Given how this project sits, yes, I think we will. Roger will have to do that, I don't really have any familiarity with the OPENPIT option.

Chris D. asked specifically if you would look at the AERMOD OPENPIT source characterization in the I-70 files

Hi all,

Ex. 5 - Deliberative Process

In addition to the query Chris has below (which we can repeat), based on our discussion we should also ask for:

Ex. 5 - Deliberative Process

3. A decoder for which alternatives go with which AERMOD input/output file names

What else? Feel free to reply to all. Tomorrow I can write it up, or R8 can, and we can figure out who should send it… R8 can send w/ a cc to HQ, or we can send, whatever R8 prefers.

Chris and Mike,

Could you also provide the scripts and/or intermediate tables that calculate the volume source

emission rates from the MOVES output? It is important for us to understand how the cross-walk between MOVES links and AERMOD sources was performed.

Thanks,

-Chris
