Hi, as you know there's a communication effort going on with EtO headed by the Administrator's office. They have asked the regions to provide community detail information (to the extent that we can) on the list of high risk facilities in our region. They plan to upload

this information onto the EtO Website on June 14. There is a section, see below, where I will need your help. Again, if you have the information, that's great. If not, we'll leave it until we can update the webpage at a later date. The high risk list at this time is:

Nonresponsive based on revised scope

B. Braun Medical	Allentown	PA

Nonresponsive based on revised scope

If you can provide a separate response for each facility that would be great. Please let me know whether or not I can expect something by June 8th.

Thank you!
Alice

Community Details

This section will be populated based on the prompts below by the regions -

Include regional specific information if available (note this is not intended to be exhaustive and you may not have all of the following information initially. This is intended as a list of some types of information that would help a community understand their risk in context):

1. *When the community meeting is planned or a video of that meeting if available and/or any additional outreach expected.*

2. *How long the facility has been operating*

3. *Any specifics about how EtO is used at the facility (what types of equipment, therapies, or spices) or other important business information.*

4. *How many workers and what types of equipment they are using/should use to protect themselves.*

5. *Cover any recent controls installed in recent years and what impact that might have had on risk if any.*

6. *Cover any planned controls and what impact that might have on risk if any.*

7. *Cover any recent inspections or enforcement actions if relevant or possible to include.*

8. *Cover any relevant local monitoring data if any.*

Consider explaining any important local landmarks of concern (ie is there a school or park in the risk zone? Is there a daycare or other businesses of concern? Is there a warehouse that could be an alternate source?) We may not be able to say much other than that we know these locations are of concern, but just mentioning them may help a community understand that our interests align with theirs in terms of being aware of and trying to protect exposure at these sites.
