Thanks Jay.

Michael –

Looks like the first day I can get our technical folks together is April 12th. We have 9am, 1pm and 3pm available for a call. Would one of those times work for you?

Best Regards

Dave

I am very interested and glad to hear that NSF is involved in this area, and think we should discuss out respective activities compare . Unfortunately I will be out of the office for a couple of weeks beginning later today, so I would suggest you make initial contact with Michael who is leading our current testing work. Looking forward to catching up when I return April 17.

Hi Jay –

Mike Schock told me you might be working on atmospheric water generators. At NSF we are also developing a protocol for testing these. Let me know if you would like to discuss.

Best Regards

Dave

I've been told Jay Garland of the NERL laboratory. He's in this building on the floor below me. garland.jay@epa.gov

Subject: Atmospheric Water Generators

Hi Mike –

There was an article in the WSJ yesterday about an atmospheric water generator company Water-Gen, that is reportedly working with EPA on a CRDA for these types of products.

https://www.wsj.com/articles/sheldon-adelson-facilitated-epa-connection-for-israeli-firm-1522204212

I was wondering if you knew who at EPA is working on this. We have been working with some companies to develop a protocol (and perhaps eventually a standard) for these types of products, so it might be good for us to loop them in.

Thanks

Dave
