Jim,
Thank you again for your time in setting up the mtg with RCRCD! I appreciated the tour and all the info. I promised I'd send you a quick blurb on Peterson Mitigation; so here it is below. Pls note, the info is for the most part cited by memory as I don't have the original docs in front of me, but I didn't want more time to pass before I sent you what I promised.
Essentially, PR will be the 2nd largest mitigation bank in the country. With a total of about 4,000 acres, it is located in unincorporated LA County, west of Palmdale at the extreme headwaters of Santa Clara River. It is poised to service a very large primary, secondary and tertiary area reaching all the way west to Ventura River and South to LA River. I think the credits for this bank will be split between re-establishment and preservation and the bank will have (based on the Corps ratio setting so far) about 100 credits of re-establishment and 800 credits of preservation. I think there are a number of aquatic resources, including alluvial floodplains, ephemeral streams, freshwater marsh, wetland riparian and season wetlands.
Still working out a few kinks; my guess is the IRT is probably going to approve the bank in late fall.
Let me know if you have specific questions.
Sarvy
