Hi Chris,

Regarding pirimiphos-methyl, I have cut and pasted below the reason there no longer tolerances for wheat. So the next question from you might be, what if you find it? I am looking into that answer now.

In 2001, EPA published-an Interim Reregistration Eligibility Decision (IRED) for pirimiphos-methyl and made a determination that pirimiphos-methyl residues of concern do not concentrate in wheat flour. Because the tolerance is no longer needed, EPA is revoking the tolerance in 40 CFR 180.409(a)(2) for residues of the insecticide pirimiphos methyl and its metabolite 0-(2-ethylamino-6-methyl-pyrimidin-4-yl) 0,0-dimethyl phosphorothioate and, in free and conjugated form, the metabolites 2-diethylamino-6-methylpyrimidin-4-ol, 2-ethylamino-6-methylpyrimidin-4-ol, and 2-amino-6-methylpyrimidin-4-ol in or on wheat flour as a result of application to stored wheat grain.

David

Deliberative Process / Ex. 5

Thanks for the heads up.

By the way, Captan looks good. The more I look at it the happier I am.

David
