Subject: Fw: Clarification of NTP report (released in August, 2017)

FYI, I reached out to NTP for additional context on the selected exposure duration for their TP53+/- mouse study. Other than details on the range-finding study, there doesn't seem to be much that they didn't already note in their report.

Hi Andrew,
Hope you are doing well. Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

I hope this information is helpful. Please call me if you need further clarification or more information. Thanks.

Dan

Dear Drs. Morgan and Waalkes,

As you are probably aware, the IRIS Program at EPA is conducting a human health assessment of inhaled formaldehyde. Barbara Glenn and myself are the co-chemical managers. A key focus of the assessment is on the carcinogenic potential of formaldehyde exposure. The research report from your division that was released in August titled, "Absence of formaldehyde-induced neoplasia in TRP53 haploinsufficient mice exposure by inhalation" has been brought to our attention and I was hoping that you might be able to provide some clarifying information now that it is publicly available (I spoke with you at your poster on this study at SOT several years back).

Ex. 5 Deliberative Process (DP)

Thank you for any explanation, clarification, or insight you can provide. If it would be easier to discuss over the phone, Barbara and I would be happy to give you a call.

Otherwise, I hope that you are settling into Fall, and that your research (or retirement) is going well. I look forward to hearing from you.

Best regards,
Andrew
