Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

GFL AMERICAS LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

NAGASE AMERICA LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

NORTON LILLY INTERNATIONAL

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PREMIUM GUARD INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PURE TECHNOLOGIES US INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

RADIO SYSTEMS CORPORATION

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

STELLAR REFRIGERATION SERVICES I

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

STS LOGISTICS AND ANALYTICS, LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

UNIMATEC CHEMICALS AMERICA INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

UNISTAR CHEMICAL INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

EAGLEPICHER TECHNOLOGIES LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

Fastenal Company; FASTENAL COMPANY PURCHASING

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PARASENCE

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

WHIRLPOOL CORP

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

Volkswagen Group of America Inc

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

FUJIFILMELECTRONIC MATERIALS USA, INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

CARESTREAM HEALTH INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

THERMO FISHER SCIENTIFIC INC; PATHEON API SERVICES INC; THERMO FISHER SCIENTIFIC (ASHEVI; THERMO FISHER SCIENTIFIC CHEMICA

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

SIGMA- ALDRICH CO LLC; ALDRICH CHEMICAL CO. LLC; VERSUM MATERIALS

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

TOYOTA MOTOR ENGINEERING & MFG N; TOYOTA MOTOR NORTH AMERICA, INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

AMCOR INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

INTERPORT COMPANY, INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

GLOBAL CAPITAL RESOURCES CORP

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

AIR PRODUCTS & CHEMICALS INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

NCR CORP

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

CARNIVAL CORPORATION

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

AMNEAL PHARMACEUTICALS LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

DUPONT SPECIALTY PROD USA LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

L3 UNMANNED SYSTEMS, INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

CHILL-TEK INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

HAMILTON BUSINESS CENTER

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

NOBLE DRILLING (U.S) LLC; NOBLE SERVICES COMPANY LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

OLDACH ASSOCIATES, LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

BBC BIOCHEMICAL

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PHT INTERNATIONAL INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PINK BAKING CO

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PORSCHE MOTORSPORT NORTH AMERICA INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PRECISION SYSTEMS

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ROWAN COMPANIES, INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

QANTAS AIRWAYS LIMITED

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

DIVERSIFIED PURE CHEM LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

International Products Sourcing Group In

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

GOODMAN MANUFACTURING CO LP

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

INTERCRUISES SHORESIDE & PORT SE

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

SHILMANN ROCBIT LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

CURIOX BIOSYSTEMS INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

DIGI-KEY CORP

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

FLUORYX LLC; FLUORYX, INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

HAMILTON STORAGE TECHNOLOGIES IN

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

SEACON ADVANCED PRODUCTS

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

SINGULARIS TECHNOLOGIES INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

TMC INDUSTRIES INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

EMERSON CLIMATE TECHNOLOGIES, INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

B & H SOURCE GROUP LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

LUTRONIC AESTHETICS INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

GELEST INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

COOL MASTER USA LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

EMPAVA APPLIANCES INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PETER THOMAS ROTH LABS LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ADVANTEST AMERICA INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ELI LILLY AND COMPANY

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

BAKER HUGHES OILFIELD OPERATIONS LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ICOOL LLC; ICOOL USA INCORPORATED

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

WHEELER MANUFACTURING DIV

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

REFRICENTRO INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

GE PRECISION HEALTHCARE LLC; GENERAL ELECTRIC-GAS GREENVILLE

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

SIEMENS INDUSTRY INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PRINCESS CRUISE LINES LTD

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

HAVILAND PRODUCTS COMPANY

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

C&J GONZALEZ

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PRECISION ENERGY SERVICES INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

SHOWA DENKO AMERICA INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

THE PEPBOYS - MANNY MOE & JACK

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ROYAL CARIBBEAN CRUISES LTD

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

CONCORDE SPECIALTY GASES INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

KEARFOTT CORPORATION

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

NAPA

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

NATIONAL STEEL AND SHIPBUILDING

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ISLAND BREEZE SYSTEMS CA LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

PLZ AEROSCIENCE CORP

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

NORWEGIAN CRUISE LINE; OCEANIA CRUISES S DE RL

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ITW CHEMTRONICS

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ALCON VISION LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

LEARJET INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

MORIROKU AMERICA INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

SPECIALTY CHEMICAL PRODUCTS

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

AIROSOL COMPANY INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

W.L. GORE & ASSOCIATES, INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

DGI TECHNOLOGIES INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ECOOL LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

ENSCO INTERNATIONAL INC.

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

HSH INTERPLAN USA INC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch

Subject: EPA request for HFC-related data

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 26, 2021

Dear Sir or Madam,

The Environmental Protection Agency (EPA) is sending this email because we have information suggesting that your company may have imported or exported hydrofluorocarbons (HFCs) between 2011 and 2020. On May 19, 2021, EPA published a proposed rule that, if finalized, would generally restrict production and import of HFCs to companies that hold allowances in accordance with the American Innovation and Manufacturing Act of 2020 (AIM Act). The purpose of this email is to:

- Request that that you provide information regarding your company's annual HFC import and/or export amounts;
- Inform you of our intent to publish HFC production and import quantities for the years used to calculate individual companies' allocations.

Responding to this request for information is voluntary, but failure to do so may prevent EPA from being able to issue allowances to your company.

Our information suggests that you may be affiliated with the following companies that may have imported or exported HFCs between 2011 and 2020:

INT'L. LOBSTER & MAGURO LLC

Please note that these companies may be owned by or be subsidiaries of your own company. You may not be the appropriate recipient to handle the request in this email. The appropriate recipient is likely your government relations department or the individual who manages imports for your company. Additionally, your company may have received a physical letter containing the same request as the one described in this email.

The AIM Act, enacted December 27, 2020, directs EPA to phase down production and consumption of HFCs over the next fifteen years to 15 percent of a set of baselines established by Congress. To implement this phasedown, Congress directs EPA to set up an allocation and trading program under which individuals would not be able to produce or import HFCs without an allowance, with limited exceptions. EPA has released aggregate production, import, and export information by year between 2011 and 2020 and the names of companies that have reported to EPA (see here and here). EPA is reaching out to you because we have information suggesting that your company may have imported, exported, or destroyed HFCs between 2011 and 2020 and thus may be eligible for inclusion in the proposed allocation program.

EPA intends that this rule, if finalized, will establish the criteria under which EPA will calculate company-specific allowances. EPA intends to release information, including the names of companies that produced or imported HFCs between 2011 and 2020, as well as aggregated production and/or consumption information weighted by each HFC's exchange value listed in the AIM Act. You can find these "exchange values" listed in the proposed rule here; they are equivalent to these chemicals' "global warming potentials," as established by the International Panel on Climate Change (2007).

Under the proposal, calendar year 2022 is the first year in which companies would be required to hold allowances to import or produce HFCs. EPA intends to issue allowances by October 1, 2021 for calendar year 2022 and will release a list of companies and their allowance levels. To facilitate consideration of your company as a potential HFC allowance holder, we ask that you provide the information requested within 14 days of receipt of this email. **Please be aware that if you are issued allowances under this program, EPA does not plan to withhold as confidential any information provided in response to this email.**

Please review the company names at the top of this email and provide corrections if applicable. If this company is a subsidiary, please email Pete Rodrigue (rodrigue.pete@epa.gov) and provide the name and contact information for the highest level U.S. parent company. We plan to use the confirmed information as our record of your company's contact information and, unless arranged otherwise, for correspondence with your company regarding HFC allowances.

If you submit data to EPA in response to this request, EPA may also require records to verify any reported data (e.g., bills of lading and other Customs records). Likewise, EPA may contact you further to request verification of additional information. The Agency encourages you to be prepared to respond to any such requests in a timely manner.

This email should not be interpreted to signal a particular course of action for the issuance of HFC allowances. EPA is not prejudging the outcome of the final rule nor the Agency's review and verification of any information it receives.

If you choose to provide the information requested in this email, please do so within 14 days of receipt of this email. You must send your response through EPA's electronic Greenhouse Gas Reporting Tool (e-GGRT). Instructions and the relevant forms can be found here.

Please also email Pete Rodrigue (rodrigue.pete@epa.gov) once you have submitted data for tracking purposes. Pete can also respond to questions you may have about this collection.

More information about the AIM Act and EPA's recently-signed proposed HFC Allocation Rule is available on EPA's website at www.epa.gov/climate-hfcs-reduction. You can find the docket for the proposed rulemaking here. That page has the text of the proposed rule. You can also find the supporting technical memorandums in that docket (on this page), as well as comments submitted thus far by stakeholders. Please note that if you wish to submit comments on the proposed rule, the comment period closes on July 6, 2021. The text of the AIM Act can be found here (the AIM Act text starts on PDF page 1074). Finally, you can find a short FAQ and a factsheet on the proposed allocation rule at the bottom of this page, and some slides from an EPA presentation on the proposed rule here.

Thank you in advance for your prompt response.

Sincerely,

Luke Hall-Jordan, Chief
Stratospheric Program Implementation Branch
