Subject: Silent Killers - the legacy of toxic biocides in Britain
Silent_Killers_the_Toxic_Legacy_of_Biocides_in_Britain.pdf

Steve Knott
Designated Federal Official
US EPA

I have some crucial evidence for the US EPA FIFRA Scientific Advisory Panel that was re-scheduled for 13-16 December 2016, just in case the SAP decides to bow to pressure from Monsanto and CropLife America to declare that glyphosate is not a carcinogen.

Dr Peter Clausing gave evidence at the International Monsanto Tribunal about fraud
"Ample evidence has been provided above showing that European Authorities twisted or ignored scientific facts and distorted the truth to enable the conclusion that glyphosate is not to be considered a carcinogen, thereby accepting and reinforcing the false conclusion proposed by the Monsanto-led GTF. The German Federal Institute for Risk Assessment (BfR) and the European Food Safety Authority (EFSA) committed scientific fraud."
In his evidence to the Tribunal, Clausing systematically demolished arguments that the EU authorities used to dismiss the significant findings of glyphosate-induced malignant lymphoma in mouse carcinogenicity studies.

The complete recordings from the International Monsanto Tribunal are now available. Below is the link to Dr Peter Clausing's presentation: his is the third one on page 8.

Intimate relationships between Britain, the USDA and the US EPA
During WW2 Rothamsted Research in the UK and the USDA simultaneously discovered the herbicide 2,4-D. Since then Britain has followed in America's footsteps like a faithful dog.
Such was its dog-like loyalty that in 1971, when the scandal of PCBs broke at Anniston Alabama about the population exposed to waste from the factory getting cancers and birth defects, the Ted Heath Tory Government in Whitehall, thinking Britain was still at the **Head of an Empire**, readily agreed to ramp up the production of PCBs at Monsanto's factory in Newport, Wales. **Monsanto's toxic waste was dumped between seven quarries in Wales. Wales is a small country between one sixth and one seventh of the area of Alabama**.
No wonder Wales has the sickest population, salmon fry missing from three Welsh rivers, and a Biological Impact Index that is even lower than the UK average, which is number 189 out of 218 countries. Two days ago Wales had the worst results out of the four nations in the UK for the PISA tests (Programme for International Student Assessment is a worldwide study by the Organisation for Economic Co-operation and Development (OECD) tests for 15-year-olds in mathematics, science, and reading).

"As an intelligent species we are remarkably stupid. Our children will be extremely angry with us if we are not changing the way we are managing our nature"
Professor Dave Goulson, an eminent UK Professor of Biology, said this to the Danish Press on a lecture tour of Denmark. He was talking about the systemic neonicotinoid insecticides and their biocidal activity on honeybees and bumblebees.
Lobbyists for the pesticides industry **are** remarkably **stupid** because they don't realise that what is happening to us and our children in Wales will eventually happen to them with the thousands of untested and unmonitored man-made chemicals that are in the environment.

Monsanto and their partners in crime do not care about what happens to lobbyists
As long as lobbyists protect the Agrochemical Industry it will continue to make them a lot of money. Industry has fed lobbyists lie after lie about glyphosate not causing cancer. Monsanto said that about PCBs and now they have to pay thousands of dollars in compensation in the US to those who suffered (or died from) non-Hodgkin Lymphoma (NHL) after being exposed to PCBs. A large lawsuit is in progress about glyphosate causing NHL.

New Head of US EPA been appointed by Trump
Scott Pruitt, Oklahoma Attorney General, has been appointed as Head of the US Environmental Protection Agency. I think the EPA should clean up its act before he arrives.

Yours sincerely

Rosemary Mason South Wales UK
