DESCRIPTION OF INCIDENT:

At 1820 we began offloading mud to M I dock. At 1822 we shut down to tighten leaking fitting. We resumed pumping At 1830, as soon as pumping began the hose parted at the 6" cam lock connection. Pump was shut down and deck valve shut. Approx 20 gallons of nova plus mud went onto deck and Approx 8 gallons went overboard. Oil pads and absorbant booms were put into water and on deck to prevent spread. Notified harbor police nrc at 1935 at reference # 936207. Also notified seacor base, marathon base and eco. Rag was found inside todo fitting. Tanks had been inspected and cleared by auditors before receiving mud from dock.

Section IV
Part 44.
Description of Casualty

On 5 April 2010 at or about 1830hrs, preparations were made to discharge 4300 barrels of Nova Plus drilling fluid to M I Swaco dock in Port Fourchon's "E" slip. Once connections were made and communications verified the facility was ready to receive. The Engineer on watch began the transfer. The hose attendant called via radio to inform of a leak on the hose. The operation was stopped. The Engineer made repair to the leak and operations resumed.

Shortly after starting to pump again, the cam lock fitting parted spewing product onto the deck and into the water. The hose attendant immediately called for operations to cease. The pump was secured and efforts to cleanup the spill were underway.

The crew deployed a containment boom into the water in an effort to minimize spreading of the discharged mud. Absorbent pads were utilized to recover spilled material from the deck. All contaminated materials were stored into approved disposal drums. An estimated 20 gallons were recovered from the deck and an additional 8 gallons recovered from the water body.

Once the cleanup was completed, there was a rag discovered inside the Todo coupling. The cam-lock fitting was fount to be elongated and disfigured. It is theorized that the rag caused enough pressure to build to shear the brass cams from the cam-lock coupling.

The transfer was then completed without further incident and normal operations were resumed.

DESCRIPTION OF INCIDENT:

At 1820 we began offloading mud to M I dock. At 1822 we shut down to tighten leaking fitting. We resumed pumping At 1830, as soon as pumping began the hose parted at the 6" cam lock connection. Pump was shut down and deck valve shut. Approx 20 gallons of nova plus mud went onto deck and Approx 8 gallons went overboard. Oil pads and absorbant booms were put into water and on deck to prevent spread. Notified harbor police nrc at 1935 at reference # 936207. Also notified seacor base, marathon base and eco. Rag was found inside todo fitting. Tanks had been inspected and cleared by auditors before receiving mud from dock.

Section IV
Part 44.
Description of Casualty

On 5 April 2010 at or about 1830hrs, preparations were made to discharge 4300 barrels of Nova Plus drilling fluid to M I Swaco dock in Port Fourchon's "E" slip.

Once connections were made and communications verified the facility was ready to receive. The Engineer on watch began the transfer. The hose attendant called via radio to inform of a leak on the hose. The operation was stopped. The Engineer made repair to the leak and operations resumed.

Shortly after starting to pump again, the cam lock fitting parted spewing product onto the deck and into the water. The hose attendant immediately called for operations to cease. The pump was secured and efforts to cleanup the spill were underway.

The crew deployed a containment boom into the water in an effort to minimize spreading of the discharged mud. Absorbent pads were utilized to recover spilled material from the deck. All contaminated materials were stored into approved disposal drums. An estimated 20 gallons were recovered from the deck and an additional 8 gallons recovered from the water body.

Once the cleanup was completed, there was a rag discovered inside the Todo coupling. The cam-lock fitting was fount to be elongated and disfigured. It is theorized that the rag caused enough pressure to build to shear the brass cams from the cam-lock coupling.

The transfer was then completed without further incident and normal operations were resumed.

INITIAL NOTIFICATION

Released Into US Navigable Water: ◉ Yes ○ No

Did Product Spill Overboard: ◉ Yes ○ No

Cause of Release:
Mechanical failure of the FRC davit pressure gauge.

Estimated Size of Sheen: 10' x 20' **Color of Sheen:** Translucent / light yellow

What was Done to Clean Up The Released Product:
Total overboard release estimated to be only 2-3 lbs of light hydraulic oil. Sheen evaporated before any collection possible. All oil on deck was contained, recovered via oil absorbent materials and placed in appropriate containers for shore side disposal.

Was There Any Third Party Involvement in the Release Of The Product: ○ Yes ◉ No
If Yes-Explain:

***If "Released Into US Navigable Water" Is Checked Yes, Complete Below.**

(Releases Which Go Overboard Into A U.S. Navigable Waterway Must be Reported to the National Response Center (NRC) & U.S. Coast Guard) Also, EPA must be notified if within 3 NM of the coast

SHIP BOARD MARINE POLLUTION EMERGENCY PLAN
INITIAL NOTIFICATION

Additional Information:
Brief Details of the Incident:

The 400 Bar pressure gauge on the FRC davit failed causing a drop in pressure. The automatic pump then started to try & repressurize the system which resulted in approx.10-15 gallons of T-32 hydraulic oil to spill on the 01 deck. The oil started to drain down the rain scupper piping to the main deck then out the freeing port & down the hull to the water.

An alert crewman spotted the problem and immediately blocked the freeing port with oil pads to contain the spill on deck & raised the alarm. The full crew was mustered and appropriate actions taken in accordance with the oil spill plan. Estimated overboard oil is minimal (2 - 3 tbs.) with the remainder contained on the 01 & main deck then collected using spill recovery supplies. The largest observed sheen was approx. 20' x 10'.

Actions Being Taken To Stop, Minimize and Clean The Release:

Complete evaporation of the sheen occurred before any action taken. Since the vessel's FRC was unusable, a nearby vessel was contacted requesting assistance in recovery of the sheen & cleaning the hull. Before the other vessel's FRC arrived, within 15 - 20 mins, the sheen had broken up/evaporated. The hull was then cleaned to eliminate any further chance of product release/sheen.

The FRC davit has been secured until proper repair can be effected.

Number of Crew and Details of Any Injuries or Deaths:

Crew on board: 11

No injuries resulted from the incident.

Were evacuations needed: ○ Yes ◉ No **If Yes - Explain:**

Others:

Additional reports may be required depending on the severity of the spill (i.e Human health or the environment). Refer to section 4.4.3 of the VGP for additional information if the spill occurred within 3 NM of the coast.

REPORT NARRATIVE

On December 29, 2010 at approx. 1248 hours, Officer M. Thomassie responded to Newpark #2 in reference to a spill of hydraulic oil aboard the M/V Mr. Sidney. Upon arrival, Officer Thomassie made contact with Capt. Neil Olsen. He informed Officer Thomassie that the plug attached to the Fast Rescue Craft Davit malfunctioned, spilling approx. 10-15 gallons of hydraulic oil on the upper deck of the vessel and drained in the drain pan into the water. Only approx. two tablespoons of hydraulic oil spilled into the water which made approx. a 20 ft. sheen. The crew had cleaned up the oil on the deck and in the water using the proper booms and pads, prior to Officer's arrival. Officer Thomassie then resumed normal patrol.
